**GARETT**

**GARETT**  
ELECTRONICS

**Technology  
at your  
fingertips!**

**Garett Electronics is a young Polish brand with great potential. For almost a decade we have been providing technologically advanced products to all groups of consumers. They are characterised by functionality, modern design and high quality. The focus of the offer are smartwatches, including children's models, in which category the brand is undoubtedly the leader on the Polish market. Men's and women's watches have an original, jewellery or casual style and useful functionalities appreciated by a great number of people.**

Our efforts are noticed not only by users. We are the winners of many prestigious contests - we have been honoured with the title of „Super Brand”, „Children's Brand of the Year”, „Polish Good Brand”. We have also received the „Parents Award” of the [zabawkowicz.pl](http://zabawkowicz.pl) website.

By cooperating with our brand, you not only get high quality electronic equipment, but you can also count on the support of a dedicated customer service in terms of technical matters and marketing.

## Children's smartwatches

**Kids love freedom - everybody knows that. How can you give it to them while at the same time ensuring their safety? It is simple - get them a smartwatch!**

An attractive design will appeal to children, and the advanced technology will keep at ease even the most stressed out parents. Our smartwatches are equipped with an SOS button, which instantly informs about any danger, while the GPS function allows to easily locate the child. It also allows to make video calls, take photos, monitor the kid's voice and even upload a school timetable!

**This trendy gadget will be a perfect gift for a child... and will calm the nerves of the parents.**

## KEY FUNCTIONS:

-  **Water resistance IP65.** The certificate ensures full protection against dust and water jet. Water immersion is not permitted.
-  **Colour touchscreen display.** It allows for comfortable control.
-  **4G, LTE and WiFi connectivity.** Equipment allowing for the highest quality of connections and data transmission.
-  **Video calls.** A function for making video calls with the watch.
-  **Tracking using the built-in GPS, LBS and WiFi module.** The tracker shows in real time, with an accuracy up to 5 m, where your child is.
-  **Android OS.** With the Android system, the device has more functions, richer menu and more options than other models of children's smartphones.
-  **Answering and making calls.** Possibility to make and answer calls from the level of the watch with regard to the programmed contacts from the phone application.
-  **SOS button.** Possibility to quickly notify a family member of a danger, programmed in the watch.
-  **Pedometer.** Used for measuring the distance travelled.
-  **Built-in camera.** Possibility to take photos and to upload them to the application on the parent's phone.
-  **Smartwatch lock.** You can remotely lock the watch when your child is at school so that it does not distract them. You can also set an automatic lock at specific times.
-  **Route display.** The watch allows to display the child's recent route on the map.
-  **Voice monitoring.** When this function is activated by the application, the smartwatch makes a one-way call to the phone number and the parent is able to listen to what their child is currently doing.
-  **Voice messages.** Sending short voice messages from the watch or from the application on your phone.
-  **Sleep monitor.** It shows the hours of sleep and its efficiency.
-  **GEOfencing.** This function allows to set up a safe zone for your child. When your child leaves it, you will receive a notification on your phone. You can program up to 3 fences.
-  **School schedule.** Possibility to program the school schedule and class reminders on the watch.

## TECHNICAL SPECIFICATIONS:

Screen type	LCD	Standby time	Up to 3 days

## Women's smartwatches

**Modern women value diversity.**

What makes our products unique is the possibility to match the smartwatch to the outfit, situation, or even mood. It can also work as a piece of jewellery and an interesting accessory to a business or evening outfit. Through synchronisation with your phone, it discreetly notifies you of new messages and calls. Its sports functionalities will help you monitor every day your physical activity, including the steps taken, calories burned and heart rate.

**It is not only extremely useful but will also be ideal as a fashionable accessory to any women's outfit.**

## KEY FUNCTIONS:

-  **Water resistance IP68.** The certificate ensures full protection against water (immersion up to 1 h), as well as full resistance to dust and dirt.
-  **Colour touchscreen display.** It allows for comfortable control.
-  **Vibration module.** Notifications, calls and alerts are sent to the user watch with discreet vibrations.
-  **Heart rate monitor.** Heart rate measurement.
-  **Sports modes.** You can choose one of the pre-programmed sports activities, such as running, walking, treadmill, climbing, stepper, cycling and rowing.
-  **Pedometer.** It is a tool to measure the steps taken, the calories burned and the distance travelled.
-  **Bluetooth 4.0.** It ensures full compatibility with Android and iOS phones.
-  **Sleep monitor.** Sleep time and quality measurement based on a motion sensor and an optical sensor measuring the heart rate.
-  **Inactivity monitor.** If the user's activity is too low within a specific time, the smartwatch will display a motivating alert.
-  **Call and SMS notifications.** With the Bluetooth connection, the smartwatch displays notifications of incoming calls, new SMS or new messages in a social network.
-  **Camera remote.** A function that allows you to take pictures remotely with your smartphone camera.
-  **Application with GPS.** Using the phone's GPS module, it shows and saves on the map the distance travelled, activity duration, pace and calories burned.
-  **Replaceable straps and bracelets.** The straps and bracelets are available in different colour versions. Easy to replace and fix.

## TECHNICAL SPECIFICATIONS:

Screen type	TFT LCD	Charging time	About 2 hours
Screen dimensions	1.28 in	Standby time	Up to 5 days
Waterproof rating	IP68	Run time	Up to 3 days
Bluetooth version	Bluetooth 5.0	Face dimensions	48x45x12 mm
Transmission range	Up to 10 m	Strap / bracelet	Replaceable rubber steel strap / bracelet
Transmission range	Android and iOS	Strap length	about 24 cm
System compatibility	Li-ion	Weight	50 g
Battery type	200 mAh	Warranty	24 months
Battery capacity	About 2 hours	Dedicated application	H Band

# WOMEN ELISE

## KEY FUNCTIONS:

- Water resistance IP67.** The certificate ensures full protection against dust and short term water immersion (up to 30 minutes).
- Colour touchscreen display.** It allows for comfortable control.
- Vibration module.** Notifications, calls and alerts are sent to the user watch with discreet vibrations.
- Heart rate monitor, blood pressure monitor and pulse oximeter.** Heart rate, blood pressure and oxygenation measurement.
- Sports modes.** You can choose one of the available sports modes, e.g. treadmill, cycling, etc.
- Pedometer.** It is a tool to measure the steps taken, the calories burned and the distance travelled.
- Bluetooth 4.0.** It ensures full compatibility with Android and iOS phones.
- Sleep monitor.** Sleep time and quality measurement based on a motion sensor and an optical sensor measuring the heart rate.

## Sports smartwatches

**Ready, steady... GO!**

When you play sports and want to improve your performance, it is important to be able to measure your achievements. Our sports smartwatches are perfect for that. They allow to closely monitor the key parameters of physical activity and to record the results.

**It is an excellent choice for professionals and amateurs alike!**

## KEY FUNCTIONS:

-  **Water resistance IP67.** The certificate ensures full protection against dust and short term water immersion (up to 30 minutes).
-  **IPS colour touchscreen display.** It allows for comfortable control.
-  **Bluetooth 4.0.** It ensures full compatibility with phones running on Android and iOS.
-  **In-built GPS module.** The GPS tracker in the smartwatch allows to save the route taken during physical activity without actually having the phone with you.
-  **Heart rate and blood pressure monitor.** It measures your heart rate and blood pressure.
-  **Sports modes.** Several sports to choose from: running (outdoor, indoor, marathon), climbing and cycling.
-  **SIM card slot.** The smartwatch can work as an independent phone.
-  **Barometer, altimeter and compass.** Additional outdoor accessories in the watch.
-  **Pedometer.** It is a tool to measure the steps taken, the calories burned and the distance travelled.
-  **Answering and making phone calls.** Possibility to make calls using the built-in microphone/loudspeaker through the Bluetooth connection with the phone or after inserting a SIM card.
-  **Call and SMS notifications.** With the Bluetooth connection, the smartwatch displays notifications of incoming calls, new SMS or new messages in a social network.
-  **Camera remote.** A function that allows you to take pictures remotely with your smartphone camera.
-  **Remote music control.** Possibility to control playing music on the phone (play/pause/forward songs) using the smartwatch.
-  **Weather information.** After synchronisation with the phone, the device displays the current weather data.
-  **Replaceable straps.** The straps come in different colours. Easy to replace and fix.

Screen type	IPS	Standby time	Up to 5 days
Screen dimensions	1.3 in	Run time	Up to 4 days (up to 3 days with a SIM card)
Waterproof rating	IP67	Face dimensions	48x48x14 mm
Bluetooth version	Bluetooth 4.0	Strap / bracelet	Replaceable rubber strap
Transmission range	2,4 GHz	Strap length	about 20,5 cm
Transmission range	Up to 10 m	Weight	64 g
System compatibility	Android and iOS	Warranty	24 months
Battery type	Li-ion	Dedicated application	Smart-Time
Battery capacity	320 mAh	SIM card standard	Nano SIM
Charging time	About 2 hours		

# SPORT ACTIVITY GT

## KEY FUNCTIONS:

- Water resistance IP67.** The certificate ensures full protection against dust and short term water immersion (up to 30 minutes). The device is not designed for swimming.
- Colour touchscreen display.** It allows for comfortable control.
- Vibration module.** Użytkownik zegarka o nowych powiadomieniach, połączeniach oraz alertach informowany jest poprzez dyskretną wibrację urządzenia.
- Answering and making calls telefonicznych.** Possibility to make calls using the built-in microphone/loudspeaker through the Bluetooth connection with the phone.
- Heart rate monitor, blood pressure monitor and pulse oximeter.** Heart rate, blood pressure and oxygenation measurement.
- Sports modes.** You can choose one of the available sports modes, e.g. treadmill, cycling, etc.
- Pedometer.** It is a tool to measure the steps taken, the calories burned and the distance travelled.
- Bluetooth 5.0.** It ensures full compatibility with Android and iOS phones.
- Sleep monitor.** Sleep time and quality measurement based on a motion sensor and an optical sensor measuring the heart rate.
- Inactivity monitor.** If the user's activity is too low within a specific time, the smartwatch will display a motivating alert.
- Call and SMS notifications.** With the Bluetooth connection, the smartwatch displays notifications of incoming calls, new SMS or new messages in a social network.
- Camera remote.** A function that allows you to take pictures remotely with your smartphone camera.
- Application with GPS.** Using the phone's GPS module, it shows and saves on the map the distance travelled, activity duration, pace and calories burned.
- Replaceable straps.** The straps come in different colours. Easy to replace and fix.

## TECHNICAL SPECIFICATIONS:

Screen type	TFT	Standby time	Up to 7 days
Screen dimensions	1,7 in	Run time	Up to 5 days
Waterproof rating	IP67	Face dimensions	38x44x12 mm
Bluetooth version	Bluetooth 5.0	Strap / bracelet	Replaceable rubber strap
Transmission range	Up to 10 m	Strap length	about 23,5 cm
System compatibility	Android and iOS	Weight	45 g
Battery type	Lithium-polymer	Warranty	24 months
Battery capacity	210 mAh	Dedicated application	Da Fit
Charging time	About 2 hours

## 1. INSTALLATION OF THE GARETT TRACKER APPLICATION

Our smartwatch from the Garrett Kids series offers the full range of functionalities and the possibility of configuration after registration in the Garrett Tracker application. Using this application you can configure the settings of the watch, add contacts to the phone book and display its location. The Garrett Tracker application is compatible with all smartwatch models from the Garrett Kids series.

The application is available for Android or iOS mobile phones. It is free and it can be downloaded from the Play Store or App Store. The application can be found by scanning one of the QR codes found in the user manuals included with the watches, by typing the name "Garrett Tracker" into the shop search engine or by scanning the appropriate QR code shown below:

**Android**

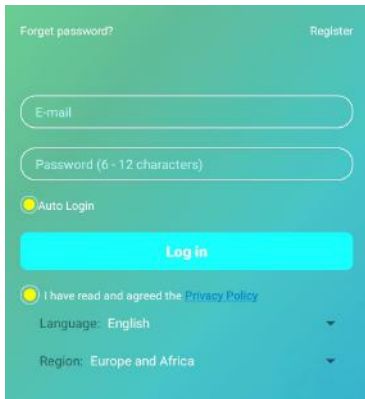

**iOS**

## 2. FIRST LAUNCH OF THE APPLICATION / REGISTRATION IN THE APPLICATION

The first time the Garrett Tracker application is launched, it will request authorisations necessary for its proper operation, such as e.g. access to your location or the ability to display notifications. The whole process of registration in the application is also described in the user manual attached to the watch. Depending on the device model, the described functions of the Garrett Tracker application may vary.

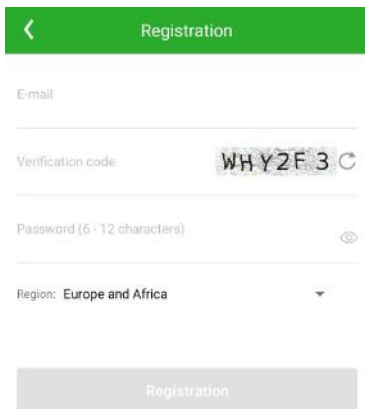

## Registration in the application:

After launching the app, a login screen will be displayed where you can log into your account (if already created), register a new account or change the app language.

You must register an account in the application, to which watches will be later assigned. The account to which the device is assigned for the first time is the administrator account. Re-assigning the watch to another account is only possible with the administrator's consent.

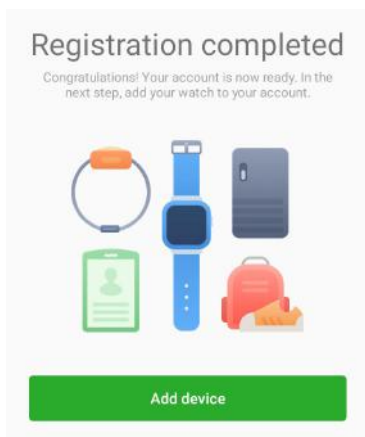

**To register a new account, click the Registration option.**

### You will see the registration screen:

- in the first field, enter your email address, which you will use as your login to the application.
- then enter the verification code from the picture on the right.
- in the last field, enter your password which you will use, along with the e-mail address, to log in to the application.

**The password may consist of 6-12 characters. Polish and special characters are not allowed.**

After filling in all the data, click the button **Registration**.

Once the data has been entered correctly, a screen will be displayed notifying you that your account has been registered successfully. In order to move on to the next step and add a watch to the previously created account, press the **Add device** button.

### The Add Device screen will appear:

- in the first field enter or scan the QR code from the sticker on the back of the watch (**REG CODE**) or in the watch settings.

- then enter the name of the device, which will be assigned to the account created.

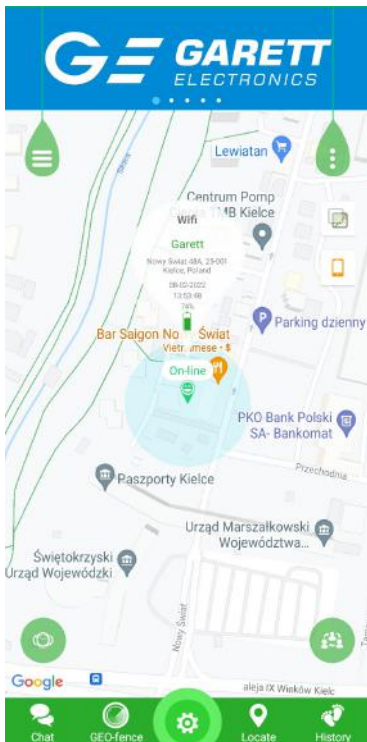

- then select a user relationship for your watch.

- optionally, enter the phone number of the device to facilitate communication.

After filling in all the data, click the button **OK**.

**In case of problems with the registration of your device, contact the Technical Support Department at: [serwis@garett.pl](mailto:serwis@garett.pl).**

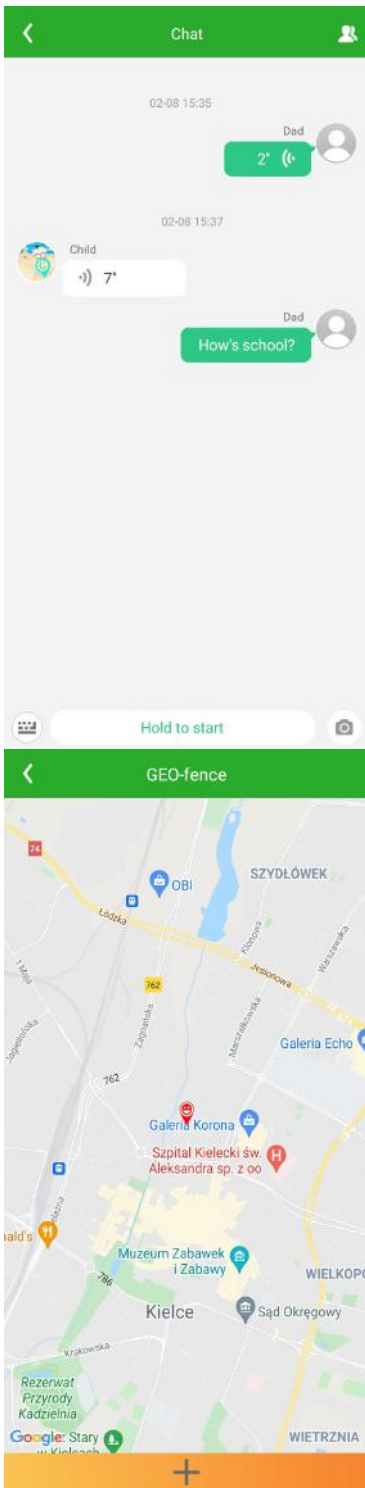

### 3. USING THE APPLICATION

After successful registration and adding the device, the home screen of the app appears and displays the map with the latest watch location. The bubble over the pin specifying the location displays the source of location data (GPS/LBS/WiFi), address, time of the last location and watch battery status.

**In order to determine the location of the watch with the greatest possible accuracy, the smartwatch must be in an open area to ensure that the GPS signal is accurate and stable. When there is no GPS signal, e.g. in a building, the location is determined based on the nearest mobile network transmitter. In this case, the indicated position of the device may differ from its physical location.**

When using any function of the Garrett Tracker application or trying to configure the settings, the following message may appear: "The device is not connected". This means that the smartwatch has no active internet connection or is out of network range. Check whether the SIM card is correctly inserted in the watch and that it meets all the requirements described in the user manual supplied with the watch or in the FAQ section on the website at [www.garett.pl](http://www.garett.pl).

## "Chat" function

This function can be accessed by clicking the "Chat" icon in the lower application bar. It allows to send short voice messages (max. 15 seconds), short text messages (max. 30 characters) and photos to the watch. In order to listen to the message, click on the balloon that shows the message. Messages sent from the watch will be displayed on the left and those sent to the watch, on the right.

To send a voice memo, press and hold the "Hold to start" button. When you release the button, the message will be automatically sent.

You can send a text message by clicking on the keyboard icon, which will allow to enter the text of the message to be sent. After entering the text, click on the arrow icon to send the message to the watch.

You can send a photo by clicking on the camera icon, selecting a photo, selecting the area to be sent and confirming the operation. The photo will be sent automatically.

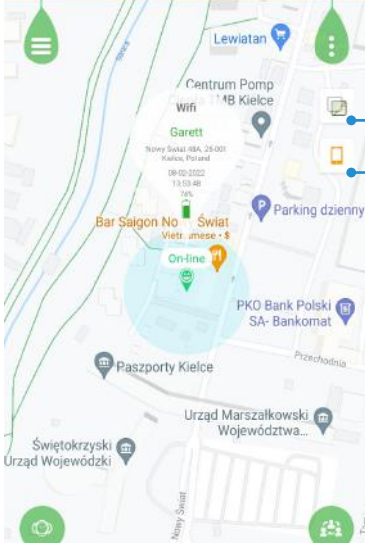

## "GEOfencing" function

This function can be accessed by clicking the "Geofencing" icon in the lower application bar. It allows to define areas (max. 3) in which the watch user can move around. When the user moves beyond the area, the application sends a notification. To set an area click the "+" icon on the lower bar of the application and select a place on the map as the centre of the geo-fence. Then enter the name and radius of the area (max. 2 km). To save the configured area, click the Save button.

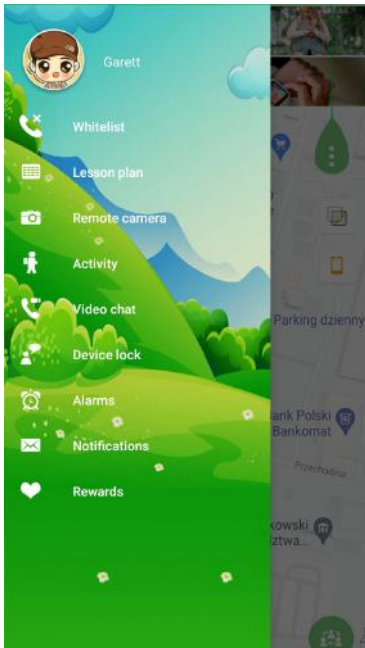

## Location function

 Clicking on this icon refreshes the data on the current location of the watch.

 Possibility to change the map style.

 Indication of the current location of the phone on which the application is launched.

## Pop-up Menu tab

To enter this tab, click the icon in the upper left corner of the main application screen. It allows to display and configure selected functions of the watch:

- **White list:** Filtering of incoming calls - only numbers that have been previously saved in the phone book will be able to call the watch.
- **Lesson plan:** Configuration of a school schedule that can be displayed on the watch under Education>Schedule.
- **Remote camera:** Taking photos using the watch camera and sending it to the application.
- **Activity:** Configuration and display of activities performed by the watch user, up to several days back.
- **Video chat:** Making video calls between the administrator and the associated watch.
- **Device lock:** Restricting the functionalities of the watch to SOS calls only.
- **Alarms:** Configuration of alarms on the watch.
- **Notifications:** History of recent notifications, including SOS calls.
- **Rewards:** Reward system - each reward is one heart. The total number of rewards obtained is displayed on the home screen of the watch.

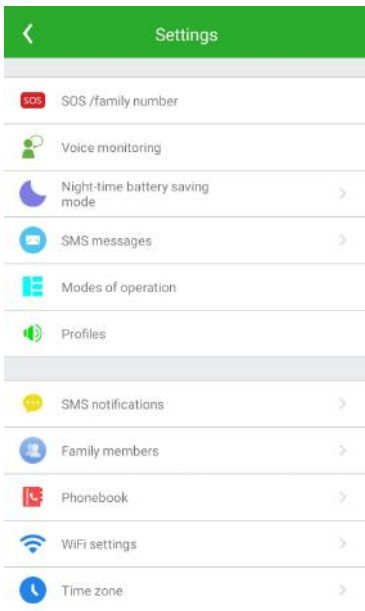

## "Video chat" function

It allows to make video calls if your smartwatch is operating with 4G technology and has a camera on the front of the face. A video call can be made either from the watch or from the application. To start a call, click the icon with the name of the associated device. The call is then made only to the assigned device in the application. It is also possible to make a group video chat. In order to do that, click "Start group video chat".

**Due to the large amount of data transmitted during a video call, a high bandwidth internet connection is required. LTE or WIFI connection is recommended. In locations with poor mobile network coverage, such as areas outside cities or towns, shopping malls or underground car parks, making video calls may not be possible or such calls may be of poor quality with interruptions in video transmission.**

## 4. SETTINGS

This section can be accessed by clicking the "Settings" icon in the lower application bar. It allows to display and configure the functions of the watch:

**SOS /family number:** Configuration of SOS numbers (max. 3). Pressing and holding the SOS button on the watch will call the first number. If the call is unsuccessful, the watch will automatically dial the second and similarly the third number.

**Voice monitoring:** Remote eavesdropping. Enter a phone number to activate the function. The watch will automatically call back the phone number entered within 30 seconds. The watch screen remains unchanged - the function is completely discreet.

**When configuring the SOS Numbers and Voice Monitoring functions, numbers should be entered without a country code (if necessary, for PL add 0048 before the number). Using the "+" symbol may prevent making calls.**

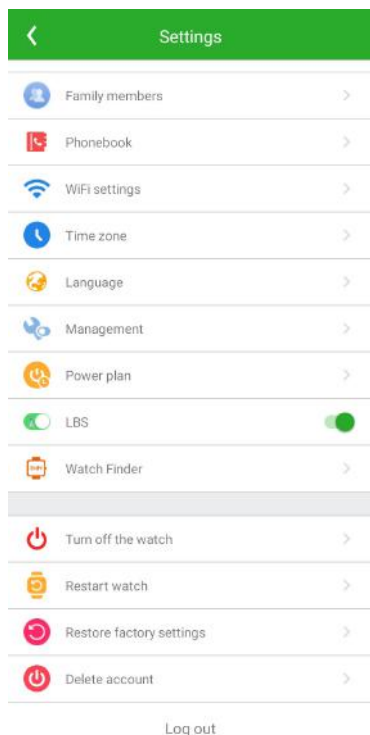

**Night-time battery saving mode:** Possibility to activate / deactivate the battery saving mode which limits the network functions of the watch between 22:00 and 6:00 (extending the running time of the watch).

**SMS messages:** Reading SMS messages sent to the number associated with the watch.

**Modes of operation:** Selection of the refresh frequency of the watch location.

**Profiles:** Selection of the sound profile of the watch.

**SMS notifications:** Activation/deactivation and configuration of SMS notifications to the entered phone number.

**Family members:** List of administrators who can manage the watch.

**Phonebook:** Adding contacts that will be displayed in the phone book of the watch.

**WiFi settings:** Configuration of the WiFi network that the watch connects to automatically, without entering a password.

**Time zone:** Configuration of the time zone of the watch.

**Language:** Selection of the language of the smartwatch.

#### **Management:**

**Power plan:** Possibility to plan turning on or off the watch.

**LBS:** Enabling/disabling the tracking function of the watch based on the nearest mobile network transmitter in the event that the watch loses GPS signal.

**Watch Finder:** The function triggers an audible alarm.

**Turn off the watch:** Turning off the watch remotely.

**Restart watch:** Restarting the smartwatch.

**Restore factory settings:** Resetting the watch to factory settings.

**Delete account:** Sending a request to delete an account from the application server. The account will be deleted within one hour.

Depending on the device model, the functions of the Garrett Tracker application described above may vary.

On pages 5 to 17 of our catalogue you will find a comparison of all models of our children's smartwatches. It will allow you to check the functions of respective models.

In case of any questions/concerns, please contact our technical support department. Our employees will answer your questions from Monday to Friday from 8 AM to 4 PM. Contact details:
