The Nightingale Awards are an annual competition that recognizes the best healthcare furniture and furnishings. The awards recognize products that contribute to a healing environment healthcare-built functionality, quality and durability, aesthetics and style, pricing, and innovation. This Award recognizes products related to the healthcare-built environment, are named for Florence Nightingale, a tireless advocate for the improvement of care and conditions in military and civilian hospitals in the 1800s.

The UL GREENGUARD Gold Certification Standard includes health-based criteria for additional chemicals and requires lower total VOC emissions levels to ensure that products are acceptable for use in environments such as schools and healthcare facilities. A product has been tested and certified to have low chemical emissions and contribute to cleaner indoor air.

BIFMA Compliant is an industry-wide registry of furniture products that conform to BIFMA safety and durability standards. Compliant provides clarity to the market by differentiating products that meet established industry standards. Manufacturers around the world LEVEL® are invited to participate.

Developed by the Business and International Furniture Manufacturers Association (BIFMA), LEVEL® is a multi-attribute standard created to deliver the most open and transparent means of evaluating and communicating the environmental and social impacts of furniture products in the built environment. Products eligible for LEVEL certification include all business and institutional furniture. Certification includes an on-site audit to evaluate supporting data for the credits pursued.

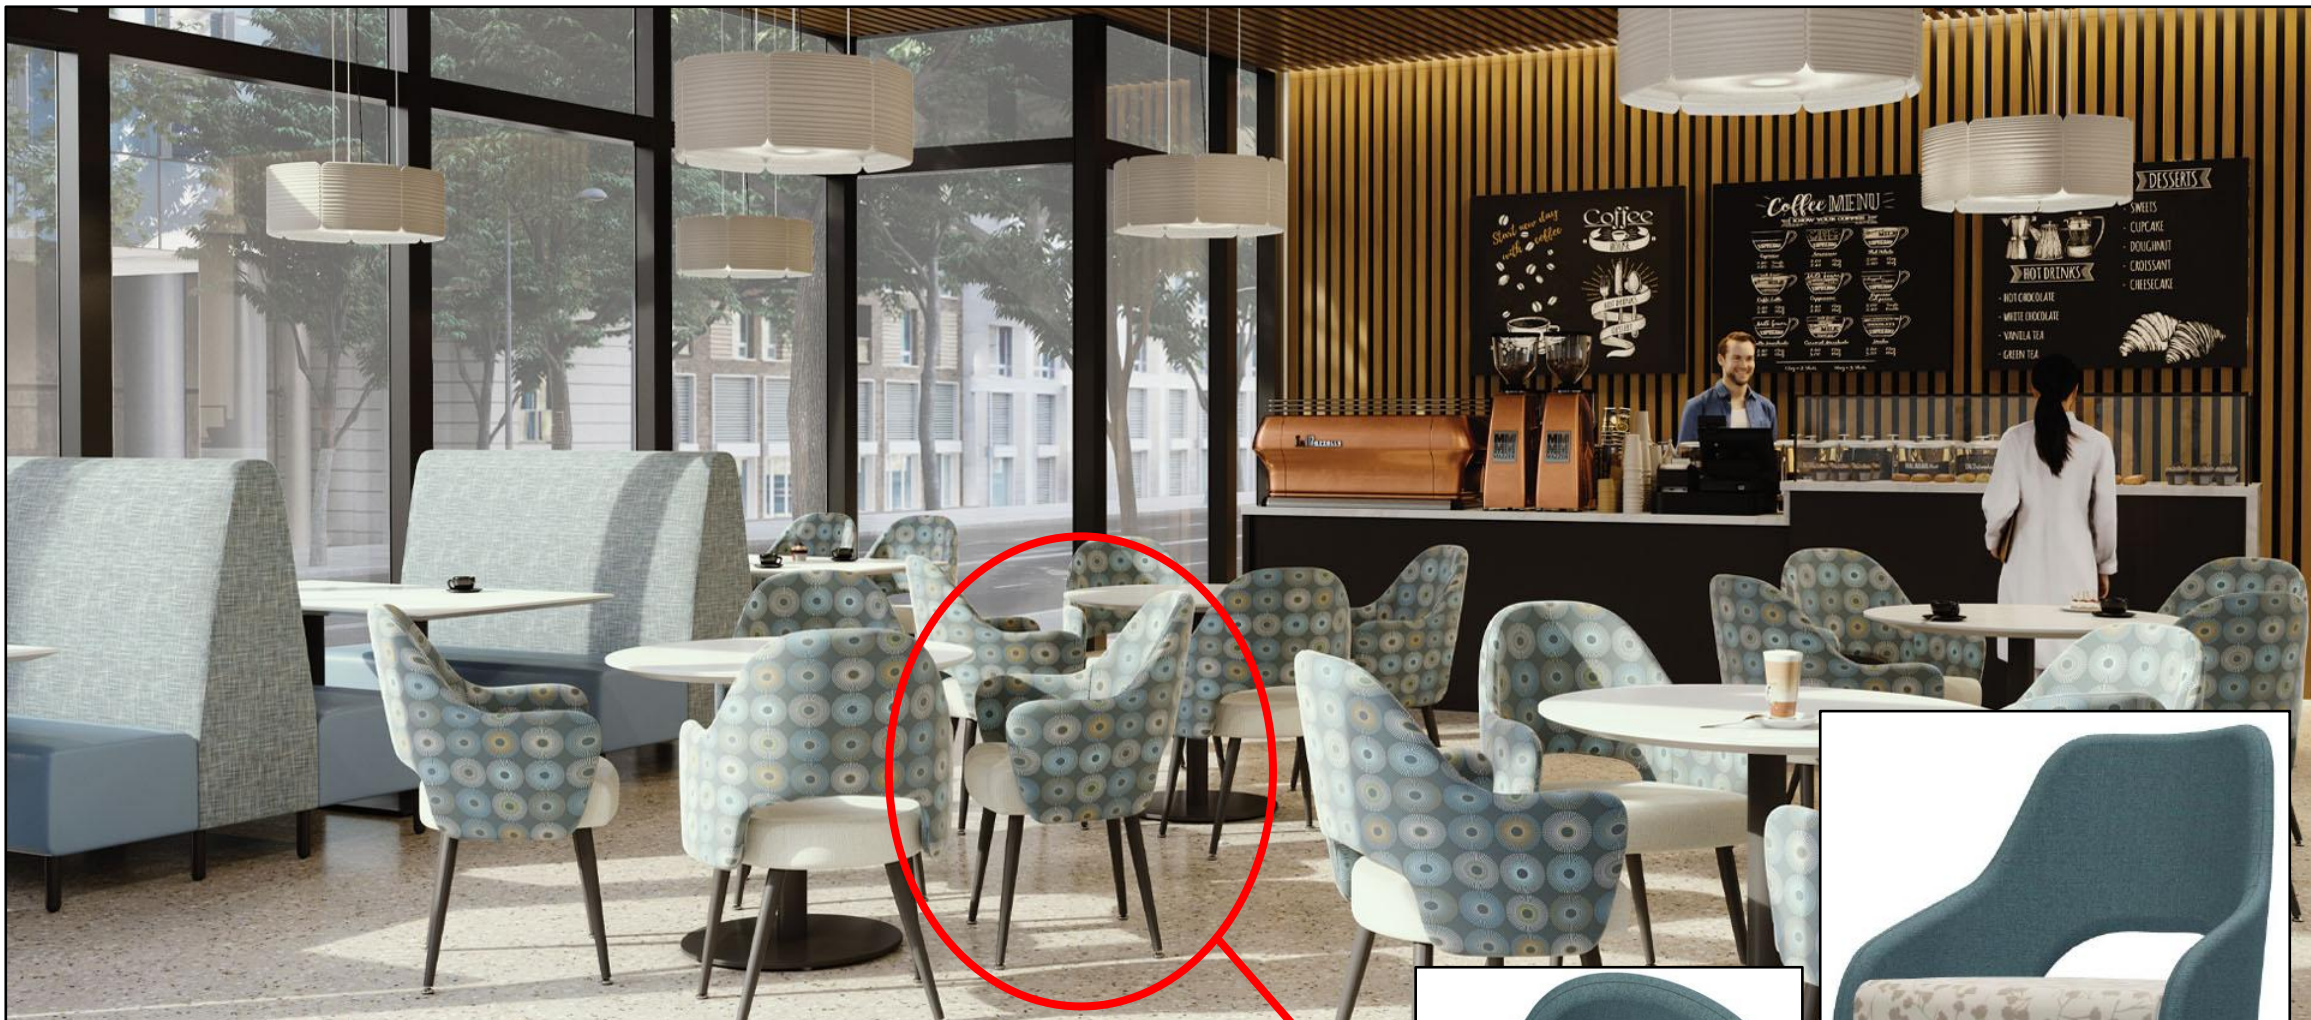

The MAS Certified Green® program entails rigorous volatile organic compound (VOC) emissions testing, which aims to limit the release of harmful chemicals into indoor environments. As VOCs can be significantly higher indoors than outdoors, our commitment to MAS Certified Green® underscores our dedication to creating healthier indoor spaces, particularly in healthcare environments where air quality is paramount. By meticulously designing and manufacturing our furniture to lower chemical emissions, we prioritize the well-being of patients, staff, and visitors.

Copper Mesh Series, click below.

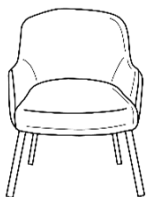

<https://viaseating.com/copper-mesh-collection/#intro>

Via Seating has collaborated with Cupron to create a copper-infused mesh for seating, using Cupron's patented copper-based technology. The **copper** is embedded in the fibers of the mesh, **ensuring it won't wear** off like surface-applied alternatives. The resulting mesh has **biocidal**, antifungal, and antiviral properties, along with anti-odor benefits.

Copper exhibits a highly researched oligodynamic effect. This natural antimicrobial property—ie. no additives are used to achieve this—enables copper to literally disinfect itself over time. Through the oligodynamic effect, copper ions instinctively bind to bacteria, viruses and other pathogens in a way that deactivates & destroys those harmful cells.

Unlike **topicals that rub off** & can create an uneven application with trouble areas, Via Seating copper collection chairs have their EPA-registered CUPRON copper infused directly into the mesh. The result is a lasting application that is approved for use in healthcare environments and more. Genie Copper Mesh® even has heavy duty and 24/7 environment applications.

A **Biocidal** product is a product with an active substance that is intended to destroy, deter, render harmless, prevent the action of, or otherwise exert a controlling effect on harmful or undesired organisms.

Testing Information:

- Staphylococcus aureus ATCC 6538
- Klebsiella pneumoniae ATCC 4352
- Growth media: Tryptic Soy Broth
- Sample size # layers: 5
- Sterilization: none
- Neutralizer: 100 ml Letheen Broth w. Tween
- Target inoc. Level: $(1.0-2.0) \times 10^5$ CFU/ml
- Inoculum carrier: 5% Nutrient broth
- Inoculum size: 1.0 ml +/- 0.1 ml
- Wetting agent: 0.05% Triton X
- Contact time: 18 - 24 h
- Temperature: 37 +/- 2°C
- Samples are tested as submitted
- Samples are prepared and enumerated using automatic equipment; Tempo, BioMerieux.
- Cultures stored at 5° +/- 2°C.
