CARTON STOCK SOLUTIONS FROM WAUSAU COATED PRODUCTS

Your pressure sensitive sheet resource.

Wausau Coated Products manufactures some of the most unique pressure sensitive sheets in the industry and offers products for almost any application. Whether your needs include high volume, ready-made materials or small quantities for custom order specialty products, Wausau Coated Products is your source for superior quality and cost-effective pressure sensitive stock.

Wausau Coated Products currently offers several distinct lines of pressure sensitive carton stock products including; **Traditional, Signature, and Digital**. Our **Traditional** line of products consists of both coated and uncoated sheets and are designed to meet the daily needs of offset printers. Our **Signature** line is comprised of premium facestocks generally considered for specialized applications such as promotional signage and industrial markings. In addition, Wausau Coated Products offers our **Digital Carton Stock** line designed for Indigo, toner, and laser printing.

Looking for a simple and convenient **Shelf Marking** solution? Our carton stock line includes eight stocked shelf marking products, allowing you to highlight product specials in an attractive and cost-effective manner. These items might just be the start...Contact your Sales Representative to discuss a custom shelf marking product that allows you to specify your print method, facestock, and tag layout for a truly unique product.

Need something really fast? Wausau Coated Products' **Quick Ship Program** is a fast, economical way to purchase custom size sheet-fed pressure sensitive products. This inexpensive alternative to custom manufacturing is perfect when time is of the essence. For more information and a listing of available quick ship products, see page 16 of this product guide.

All items listed in the Carton Stock Guide are listed as width x length and sold in full cartons only.

Contact our Customer Service Department at 800-345-8039 for more details.

Our Value Promise to You

We will work through our nationwide network of distributors to provide quality pressure sensitive sheet products for a diverse range of applications. We offer a wide variety of stocked products designed to run smoothly on different types of printers and presses. As experts in "What If" we can develop custom sheets to meet your special requirements or applications.

FAMILY OWNED AND OPERATED SINCE 1981

You can't escape a label! Wausau Coated Products has long been the preferred source of specialty and custom products in the label industry. We do the different, we do the funky, we do the special, we do the things our customers can't find anywhere else! We are often challenged to create something, solve a problem, or make a product that has never existed before. That's how we built the business and that's been our success. We are the Experts in "What if..."

Wausau Coated Products is a trusted, independent family-owned and operated leading manufacturer of adhesive-based label products, and has been for more than 40 years. We offer a comprehensive range of stocked label products to fulfill your labeling requirements for a wide array of applications.

Wausau Coated Products is your one-stop resource for premium quality stocked products and custom-engineered constructions. We are the reliable, speedy source for all of your label needs!

VersaPly® VS. VINYL

Wausau Coated Products offers a range of shelf marking options, including VersaPly® choices and Vinyl. Below are the features and benefits of VersaPly® in comparison to Vinyl shelf marking options. While Vinyl is a traditional shelf marking product, VersaPly® has been a competitive choice for shelf edge space for over 10 years. The major difference between the two options is that VersaPly® has a reinforced paper base, whereas vinyl relies on a plastic polymer base.

If you are specifically looking for a clear top shelf marker, we recommend considering Voided VersaPly® instead of clear vinyl. By using Voided VersaPly®, you can achieve full visibility of the original marker/original price beneath it, while also benefiting from easy printing and clean removal.

VersaPly® vs. Vinyl Comparison

- Lower carbon footprint and PVC free
- Reduced shipping costs
- Manufactured with 75% renewable resources
- Ease of printability without topcoating
- Strong and durable
- Performs in moist and cold environments
- Premium shelf marking adhesive solution available
- Forest Stewardship Council® Certified

QUICK SHIP PROGRAM

Deliver the value of time to your customers.

Need something really fast? Wausau Coated Products **Traditional** and **UV Inkjet** Quick Ship Program is a fast, economical way to purchase custom size sheet-fed pressure sensitive products. This quick, inexpensive alternative to custom manufacturing is perfect when time is of the essence. Oftentimes, it's less expensive than carton stock pricing and it helps reduce waste. The minimum order quantity for this program is 1.5 mmsi.

Quick Ship Specifications

- **Minimum Order Quantity:** 1.5 mmsi
- **Packaging:** Bulk packed skids except items 14 x 20 or smaller will be packed in cartons.

Quick Ship KM-1/UV Inkjet Specifications

- **Minimum Order Quantity:** 2500 Sheets 20" x 28" or 23" x 29".
- **Packaging:** Bulk packed press ready skids.

Leadtime: 3 to 5 business days for quantities up to 30 mmsi.

Please confirm lead time with your Customer Service Representative.

CUSTOM SHEETS AND CONVERSION CHART

Take advantage of Wausau Coated Products Custom Sheet Program. Mix and match to create the ideal pressure sensitive product as we offer many facestocks with various adhesive technologies and liner options. Our knowledgeable sales team and technical staff rise to any challenge related to adhesive-based label materials to quickly turn a concept into a product, and deliver a solution that will give you the competitive advantage. The minimum order for custom sheets is 2 mmsi.

The table provided serves as a convenient guide to our program's minimum requirements, displaying their corresponding values in commonly used sheet sizes.

Total Million Square Inches Required	8 1/2 x 11 Sheets	12 x 18 Sheets	13 x 19 Sheets	17 1/4 x 22 1/4 Sheets	18 x 24 Sheets	26 x 20 Sheets	26 x 40 Sheets	28 x 40 Sheets	27 x 20 Sheets	27 x 38 Sheets	20 1/2 x 29 1/2 Sheets

ENVIRONMENT AND SUSTAINABILITY

Wausau Coated Products offers a variety of unique and environmentally responsible sheet products including a wide selection of FSC® certified facestocks, as well as numerous facestocks made with Post-Consumer Waste (PCW) or recycled content. In addition to sourcing 'green' facestocks, we are also environmentally conscious when it comes to our adhesive technology, focusing mainly on water-based adhesives. Our pressure sensitive adhesives have been solvent free since our inception. As we continue to source and qualify raw materials and manufacturing processes, we are committed to depreciating our impact on the environment.

When it comes to "Green Products" there are plenty of things to consider. To help make the best decision for you and your customer, please see the commonly asked questions and answers below.

What is FSC?

Forest Stewardship Council® is a global not-for-profit organization that sets the standards for what is a responsibly managed forest, both environmentally and socially. Their mission is to promote environmentally sound, socially beneficial, and economically prosperous management of the world's forests. Wausau Coated Products holds the Chain of Custody (COC) certification. This certification applies to businesses that manufacture or sell forest products. It confirms that FSC® certified material is handled and tracked correctly throughout the entire supply chain.

Look for the FSC® logo with FSC® C008943 on our carton labels. What does that mean? Simply put, by choosing products with FSC® certification, you are helping to take care of the world's forests.

The mark of
responsible forestry

What does PCW mean?

Post-Consumer Waste is material that has served its intended purpose out in the market and has been collected at a recycling or waste center. It is then reintroduced into the manufacturing process, which helps keep tons of material from going into landfills.

What is the difference between PCW and recycled material?

While PCW has served its original purpose in the market and has been reintroduced into the manufacturing process; recycled paper may contain Pre-Consumer Waste, Post-Consumer Waste or both. Pre-Consumer Waste is material generated during any step of the manufacturing process that never makes it to the consumer (scraps, trimmings, rejects).

Are your products recyclable?

Wausau Coated Products' standard pressure sensitive label products are not recyclable due to the adhesive that is used. We do however offer a recycling compatible adhesive (RCA-44), which when used with a non-wet strength paper can be put into the recycling stream. RCA-44 is designed to 'ball up' and be removed in the screening process of recycling paper.

What is the difference between biodegradable and compostable?

A product is biodegradable if it breaks down into natural elements; this typically happens in a landfill. A product is compostable if it breaks down and provides valuable nutrients to the soil. This takes place in a compost pile or similar, as this process requires the right level of oxygen, water, and heat. The main difference between the two is although biodegradable refers to any material that breaks down and decomposes in the environment, compostable material breaks down and actually provides nutrients into the soil, improving and fertilizing it.

GUIDELINES AND TIPS

Storage and Handling

- Store on flat surface (non-concrete) at 72° F and 50% relative humidity.
- When new product arrives, rotate older stock to the front.
- Keep packages sealed until ready for use and return unused stock to carton.

Press Preparation

- 24 hours in advance acclimate stock to shop conditions.
- To avoid misfeed and sheet drag, clean and adjust grippers and guides.
- To prevent face and/or label separation, do not bend toward the liner – fan and bend ream towards the face.
- Do not load higher than six inches in press feeder.

Offset Inks and Varnishes

- Always use fresh ink, preferable low-tack, and test ink before printing. Your ink supplier can recommend ink for specific pressure sensitive stock.
- Keep press speeds low to start.
- For non-absorbent facestocks, use oxidizing inks including synthetics and heavily coated sheets.
- If stocks will be laser printed; then specialty inks are needed to withstand high temperatures – up to 400° F – and the pressure of laser printers.
- Always monitor fountain solutions (pH level of 5.0 to 5.5) as the pH level can inhibit drying of oxidizing ink.
- When using UV varnishes, verify the varnish is compatible with your ink system. Use a thin coat for full polymerization. A thick deposit of clear coat may not cure properly and a post cure can cause labels to curl up from the liner.

Laser Printing as a Second Print Pass

- It is recommended to consult your ink supplier for compatible inks that withstand pressure and heat – up to 400° F.
- Standard inks could potentially contaminate the fuser and produce unpleasant or hazardous fumes.
- To prevent abrasion from the picking and feeding mechanism, inks should be scuff resistant.
- To avoid adding too much moisture to the paper, monitor the amount of ink and fountain solution during offset printing and before laser printing.
- Avoid designs with large areas of heavy ink. The excessive moisture through high ink coverage could cause curl.
- Verify that any specialty process is capable of withstanding the demands of a laser printer. Some specialty processes – like embossing and foil stamping – do not tolerate demanding laser printing.
- Avoid spray powder, which can inhibit imaging and fusing as well as leave deposits on the laser printer, resulting in equipment damage and downtime.
- Avoid preprinting, which can hinder inkjet printing since it alters the absorption properties of the facestock.

Laser, Copier and Inkjet Printing

- Before loading laser printer, fan stacks by bending ream towards the face. Fanning pressure sensitive label stock toward the liner may cause labels to lift from liner.
- Reference printer manual for print selections that may optimize a label media product's performance and appearance.
- To avoid contaminating the printer's drum, don't run damaged pressure sensitive sheets or sheets with labels lifting or missing through printers. The exposed silicone liner can build up and weaken the stiffness of the sheet, which can result in misfeeds and jams.
- To avoid heat build up that leads to sheet curl and predisposing, run sheets of labels through laser printer one at a time.
- Do not use a pressure sensitive sheet that doesn't have a laser compatible adhesive. Pressure and high temperatures of laser printing can cause non-laser compatible adhesives to ooze.
- If the internal matrix is stripped, do not use laser printer sheets. The exposed liner has a silicone coating that over time will contaminate the drum, and the weakened sheets can misfire and jam.

Guillotining

- Blades should be clean and sharp. Dull and dirty knives will drag adhesive out of the side of the label stock and contaminate the face.
- For pressure sensitive constructions, newly ground double beveled knives of high-quality steel are recommended for best results. A 1/8" wide primary bevel of 24° or 26°, and a secondary bevel of 22° to 24° are good starting combinations.
- Keep clamp pressure as light as possible, just enough to hold the lift in place without shifting. Too much pressure increases the lift density and the knife may deflect as it cuts deeper into the material.
- Cut through the back of the stock with the face down. This allows the knife to contact the paper liner and release coating, then the adhesive and face.
- If material is overcutting (the lower sheets in the lift are longer than the upper), the blade may be dull, clamp pressure could be too high, or blade may have the wrong bevel. For soft paper, decrease bevel angle by 2 degrees (26° to 24°). For hard paper, increase bevel angle by 2 degrees (26° to 28°).
- Guillotining compresses the pressure sensitive edges. Gently fan the stock by carefully bending the ream towards the face to allow sheets to feed smoothly through the printer.
