XTRA Plus

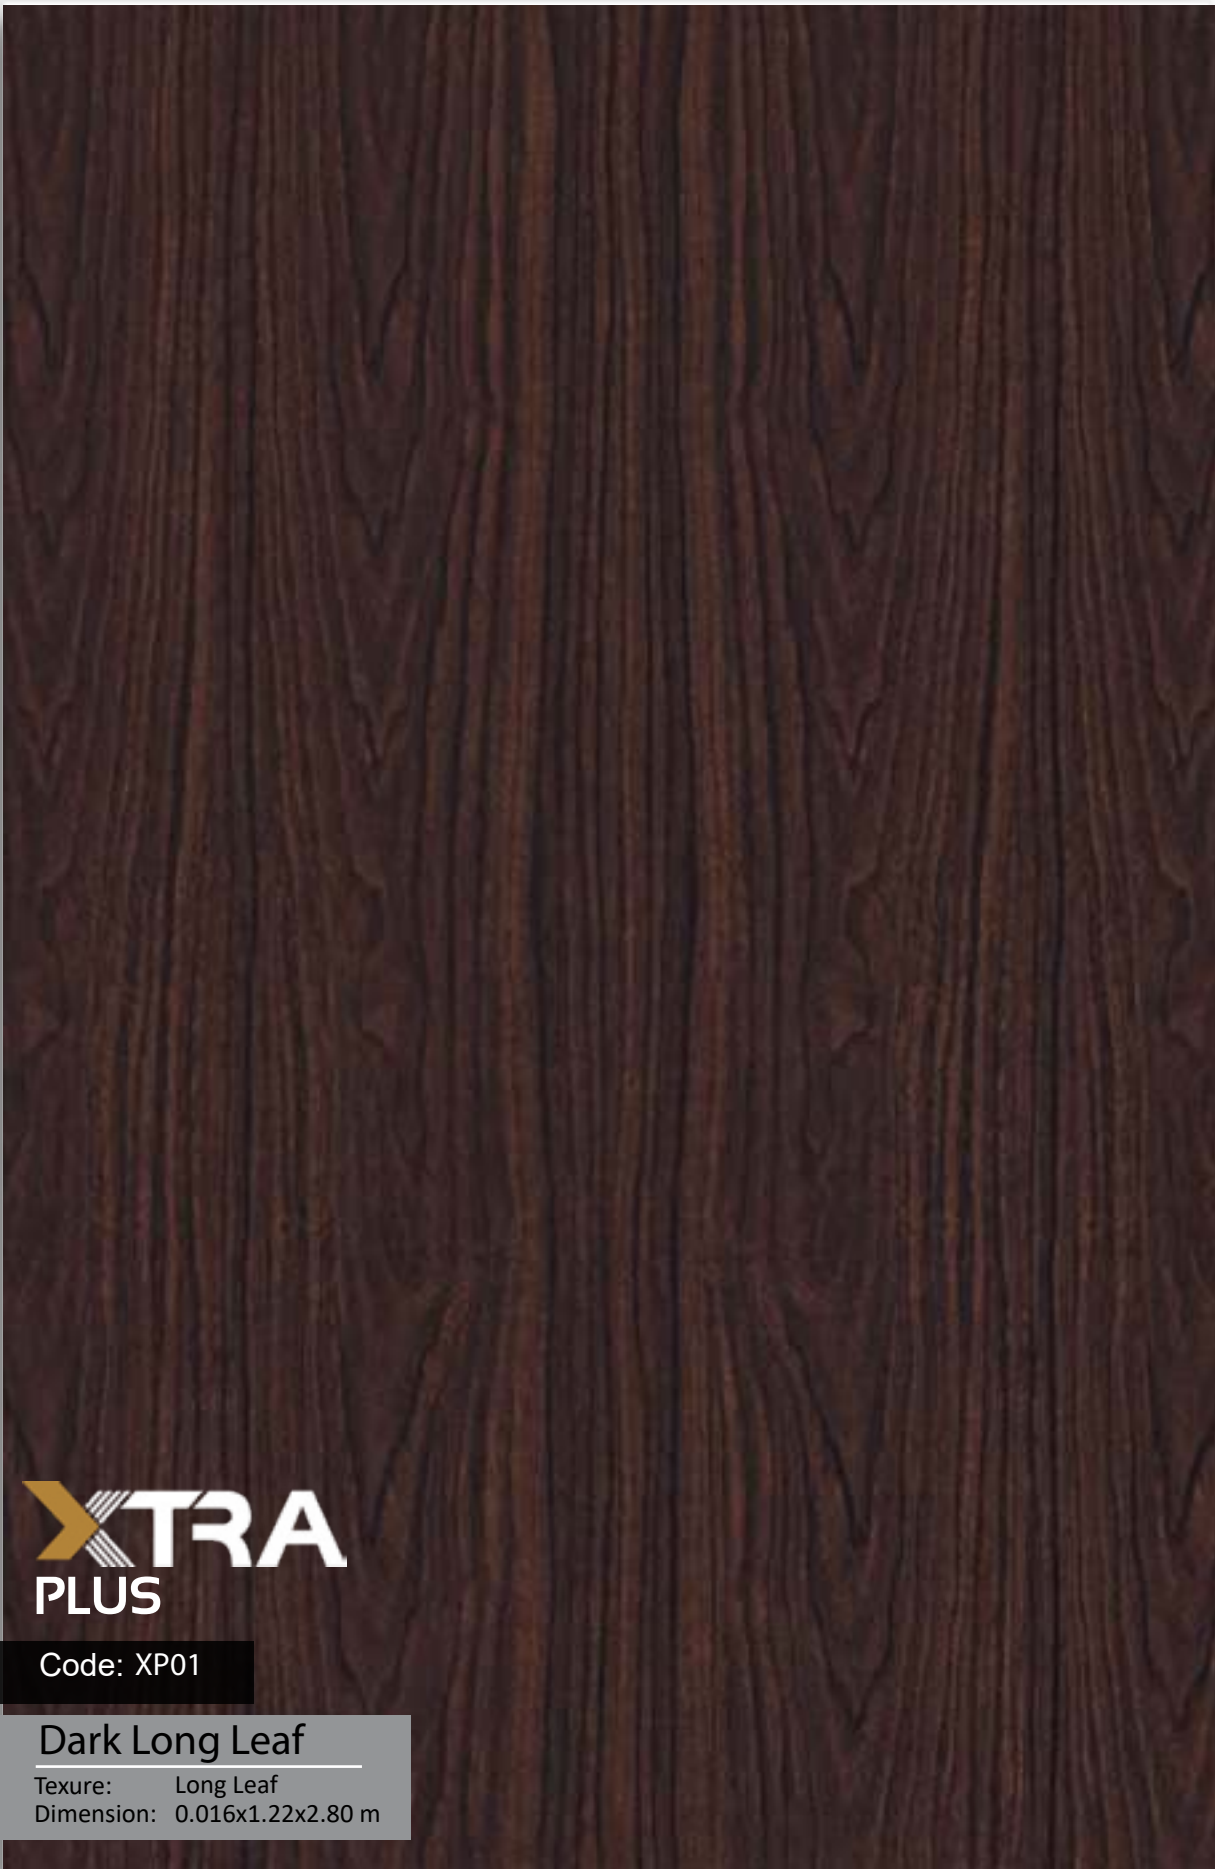

In terms of innovation, these products are among the latest in the Melamine MDF world and they are referred to as adaptive, synchronized, embossed-register MDFs. The sense of touching the natural woods and playing with light and shadow has been used in the production of these products for the first time, that have turned this product into a representative of nature in the design of various decorations. Therefore, the texture of this group of XTRA is according to the design itself, so it can give a much proper sense of nature. However, this MDF can be offered by other textures, such as Spiral. This product is produced in small size sheets of 1220 x 2800 mm, with 8 mm and 16 mm of thickness.
