PRINTING

Printing is the most popular and cost effective technique and can take the format of pad printing (also known as tampo) or screen printing. Pad or tampo printing involves the use of a pad to apply the ink to the product. Screen printing applies the ink via the use of a stencil placed on a porous material screen.

ROTARY PRINTING

A type of screen printing in which the product is rolled along the screen so that the print covers the circumference of the product, creating a 'wrap around' print.

TRANSFER PRINTING

A printed image is applied to thermal paper which is then transferred to the item via a heat process. This technique is ideal for reproducing four colour process logos onto material based product.

LITHO PRINTING

Litho printing is a method used to print text or artwork onto paper. The required image is etched onto a metal plate and then transferred to a rubber roller. The image is then taken from the roller and applied to the item.

DIGITAL PRINTING

Produced using ink jet print machinery. The 4 colours, cyan, magenta, yellow and black, are used in different quantities to produce millions of different colours and shades. It is great for printing photos, four colour process images and more detailed logos

DYE SUBLIMATION

A unique process where solid dyes are turned into gas and then bond with the polymer molecules in a product. Dye-based inks are printed on special sublimation paper, which is then heat-pressed onto a polyester fabric or polymer-coated product. The heat causes the dye to turn into gas and bond with the surface, transferring the image onto the product.

LABEL/DOMING

Self-adhesive printed label. For doming add an epoxy dome cover made of polyurethane resin; it's durable, tough and long lasting. The label and doming process is often used to achieve four colour process logos and can be more cost effective than other printing methods, as it is the same cost regardless of the number of print colours.

EMBROIDERY

Stitches one or multi-coloured logos onto material products using a needle and strands of thread or yarn.

ENGRAVING

A very intricate process which involves carving the logo into the item, producing a permanent form of branding. In most cases engraving is performed by specialist computer guided laser engraving machinery.

ROTARY ENGRAVING

The principle is much the same as standard engraving but specialist machinery enables the item to be rolled as is it marked, allowing the branding to cover the circumference of the item.

IRON STAMPING

A heated metal dye is pressed into the surface of the item which leaves behind an impression. The impression is then filled with colour.

DEBOSSING

Debossing is a technique that leaves an impression of the logo on an item. A heated, metal plate is applied to the surface of the item and when removed it leaves behind a recessed imprint.

FOIL BLOCKING

Similar to debossing (and using the same machinery), foil blocking leaves an imprint in the item, but the difference is that it can add colour to the impression. The colour is added by putting a colour foil between the dye and the product. The most popular colours to use are silver and gold.

PVC

PVC (polyvinyl chloride) is a type of plastic which is easy to mould and can be produced in many colours. A bespoke mould is created incorporating a logo in various shapes and designs and is then filled with the liquid PVC and left to set and harden. Set up costs are low, allowing small order runs.

HELPING UGANDA SCHOOLS

Promoting environmental and humanitarian change for the better, the A5 Nevus Notebook (page 53) is branded as the “promo that gives back.” This item contributes a percentage of every sale directly to HUGS (reg. 1098176) to support impactful projects.

The A5 Nevus Notebook makes a difference, with 10p from each sale supporting HUGS projects that focus on education and community development initiatives for those in need.

Logo Key

You will find products throughout this catalogue that refer to recycled, organic or ocean destined materials. Check out the information below to learn more about each of them.

Recycled Materials

Using recycled materials for promotional merchandise is a smart and efficient way to create high-quality products whilst reducing waste. By repurposing materials like plastic, paper, and textiles, these products give new life to existing resources.

Organic Materials

Incorporating organic materials into promotional merchandise is a great way to create high-quality products. Materials like organic cotton, bamboo, and jute are grown without synthetic chemicals or pesticides, making them better for both people and the environment.

Ocean Destined Plastic

Ocean Destined Plastic is recycled plastic from a certified Ocean-bound plastic source. Abandoned plastic waste is collected from coastal shores or waterways before they can enter the ocean, helping to reduce plastic waste. Using these materials for promotional products not only supports cleaner oceans but also creates reusable, high quality items.
