MODERN FURNITURE & INTERIORS

VISCON

%100 VISCON

▲ ADVANTAGES

Viscon carpets are soft and bright.

They have a luxury and sophisticated appearance.

They are durable against color fading due to sunlight.

They do not accumulate static electricity.

▼ DISADVANTAGES

They must not be exposed to humidity. They are more convenient for areas, such as living room and bedroom, rather than bathroom and kitchen.

The carpet structure can be worn out in case of intensive

▮ TECHNICAL SPECIFICATIONS

MATERIAL : %100 Viscon

WEIGHT: 3300 gr

PILE HEIGHT : 12-13 mm

POINT (m²): 720.000

EDGE : Folding

BASE TYPE : Weaving

EDGE FEATURES : Border can be added

LOTTO

% 100 POLIPROPILEN

▲ ADVANTAGES

They are cleaned well (You can clean safely later even if something was poured down.)

Dirt does not penetrate into the structure of carpet yarn.

They are durable against color fading due to sunlight.

Carpets that are made of antiallergic polypropylene fiber have an antiallergic structure since they don't cause dust and hair.

▼ DISADVANTAGES

They have low fire safety characteristics as they are synthetic.

The carpet structure can be worn out in case of intensive use.

📄 TECHNICAL SPECIFICATIONS

MATERIAL : %100 Polipropilen

WEIGHT : 2800 gr

PILE HEIGHT : 10 mm

POINT (m²) : 320.000

EDGE : Folding

BASE TYPE : Weaving

LAGOM

%100 MICRO - POLYESTER

▲ ADVANTAGES

Polyester carpets provide extraordinary softness and color sharpness.

They have mid-weight, long life and are flexible.

They are naturally resistant to fading.

They are also resistant to water based spots.

▼ DISADVANTAGES

They are synthetic.

Pilling problem is common.

Since dehumidification value is low, penetration of water and detergent into the fiber is very difficult in order to clean spots and dirt.

▮ TECHNICAL SPECIFICATIONS

MATERIAL : %100 Micro - polyester

WEIGHT : 2100 gr

PILE HEIGHT : 10 mm

POINT (m²): 166.400

EDGE : Folding

BASE TYPE : Weaving

VELVET

%100 VISCON

▲ ADVANTAGES

Velvet carpets are soft and bright.

They have a luxury and sophisticated appearance.

They are durable against color fading due to sunlight.

They do not accumulate static electricity.

▼ DISADVANTAGES

They must not be exposed to humidity. They are more convenient for areas, such as living room and bedroom, rather than bathroom and kitchen.

The carpet structure can be worn out in case of intensive use.

▮ TECHNICAL SPECIFICATIONS

MATERIAL : %100 Viscon

WEIGHT : 3300 gr

PILE HEIGHT : 9 mm

POINT (m²) : 300.000

EDGE : Folding

BASE TYPE : Weaving

WEIGHT

WEIGHT (Weight)

Carpet Weight

Means the weight of one squaremeter of carpet, including pile yarn, adhesives and second base coating material.

As the amount of materials used in a carpet is increased, the carpet weight is increased too. Therefore it can be claimed that one of two carpets of same size, which is heavier than the other, has more yarns than the other and it is woven more frequently.

Pile Weight

The amount of yarns used on one squaremeter of a carpet.

Quality standard tests show that as the amount of yarn used in a carpet is increased, the carpet's performance is increased, too. Therefore, it can be claimed that the heavier of two carpets of the same size, which are manufactured from the same yarn type, has a higher quality than the lighter one.

PILE HEIGHT

PILE HEIGHT (Pile Height)

The height from the first base level up to the end of pile yarn.

- Short haired carpet (6 mm and lower)

Short haired carpets mostly have a more frequent weaving and smoother surface. The most important advantage of carpets with short piles is their durability. Another characteristic of short haired carpets is the fact that they are practical. They are cleaned much more easier since dirt, pet hair and other similar substances penetrate more difficult into such types of carpet.

Mid-haired carpet (between 6 mm and 12 mm)

As is evident from its name, mid-haired carpets have and balance the advantages of short and long haired carpets, such as ease of use, cleaning and comfort. Therefore they are preferred a lot by the users. If you prefer your carpets to be both soft and easy-to-clean, you can choose a carpet model with a pile height between 6 mm and 12 mm.

- Long haired carpet (12 mm and higher)

Long haired carpets can be an ideal choice for those that prefer comfort for carpets. It should be noted when preferring such type of carpets that they will not be cleaned easily and they will not offer a practical use due to their weight.

TECHNICAL SPECIFICATIONS

POINT

POINT (Point)

The number of vertical and horizontal knots per square meter is counted and the frequency of knots per m² is found.

The frequency of knots is one of the most important criteria in determining the quality of carpets. Frequency of knots (in vertical and horizontal direction) is measured with the number of knots per m². The number of knots is more than 100,000 per m² in medium quality carpets whereas it can reach up to 10,800,000 per m² in high quality carpets. At this point, we can claim regarding determination of carpet quality that:

250,000 to 500,000 knots per m² means medium quality

whereas 500,000 to 1,000,000 knots per m² means high quality

1 million to 4 million knots per m² means rare quality

More than 4 million knots per m² is quite good

The weight is increased as the number of knots used in the carpet per m² is increased and accordingly the durability of carpet is increased and it shows better insulation performance. Similarly it resists more against wearing and loss of color.

CARPET - SPECIFICATIONS TABLE

CARPET SERIES	MATERIAL	WEIGHT	PILE HEIGHT	POINT	EDGE	BASE TYPE
VISCON	%100 VISCON	3300 gr	12 - 13 mm	720.000	FOLDING	WEAVING
LOTTO	POLIPROPILEN	2800 gr	10 mm	320.000	FOLDING	WEAVING
LAGOM	%100 MICRO - POLYESTER	2100 gr	10 mm	166.400	FOLDING	WEAVING
VELVET	%100 VISCON	3300 gr	9 mm	300.000	FOLDING	WEAVING
VENTURA	POLIPROPILEN	1200	5 mm	-	BORDER FRAME	WEAVING

CARPET - MEASUREMENTS TABLE

CARPET SERIES	MEASUREMENT
VISCON	It can be ordered in any requested size.
LOTTO	It can be ordered for maximum 13 ft of width.
LAGOM	It can be ordered for maximum 13 ft of width.
VELVET	7.8 x 12.8 ft 10.8 x 12.8 ft 5.9 x 12.8 ft 6.4 x 12.8 ft *2 rolls size is available. Width can be max. 6.4 ft or 12.8 ft
VENTURA	6.6 x 9.8 ft 7.9 x 13.1 ft 5.2 x 7.5 ft 4.3 x 6.2 ft *1 roll size is available. Width can be max. 13.1 ft

CARPET

CARPET MAINTENANCE RECOMMENDATIONS

Your carpet should not be beaten and should be swept with brushless ends of vacuum cleaner.

If there is any item placed on your carpet, such as coffee table, armchair, etc., it should be relocated time to time to ensure that it does not make any mark and areas contacting with those items should be swept with brushless ends of vacuum cleaner.

If something spills on your carpet, you must act very quickly. In such cases, excess liquid should be absorbed by applying paper towel, etc. before the liquid disperses and cleaning agents containing bleaching chemicals (such as bleach) must never be used. The area where the liquid is spilled should be wiped with cold water and natural soap after applying paper towel, etc. Wiping should be done with the help of a soft and white cloth in the direction of the piles so as not to disperse the stain and circular scrubbing or scrubbing in the reverse direction of piles should be avoided. The cleaned area should not be stepped on until it is dried completely.

Support of professional carpet cleaning centers should be received for deep cleaning of your carpet. Cleaning center must be informed that heavy chemical cleaners containing Sodium Hydroxide (Caustic) must never be used during the washing. After cleaning, your carpet should be dried in a short time by being laid on and without being hung. Your carpet should not be used when wet and should be protected from direct sunlight.

CARPET

Transport and Storage Conditions

Weight should not be placed on the product during transportation and storage.

The product must not be leaning / leaning against any package.

Products should be positioned horizontally, not vertically, without overlapping.

Especially viscose products should be packed in rolls and wrapped in cardboard and shipped without waiting.
