signify

Decarbonizing our value chain by:

- Engaging and supporting suppliers to decarbonize
- Sourcing of low-carbon materials
- Influence for global decarbonization
- Innovate with more efficient products and SF₆-Free MV equipment

Progressively compensate residual emissions with:

- High quality carbon removals

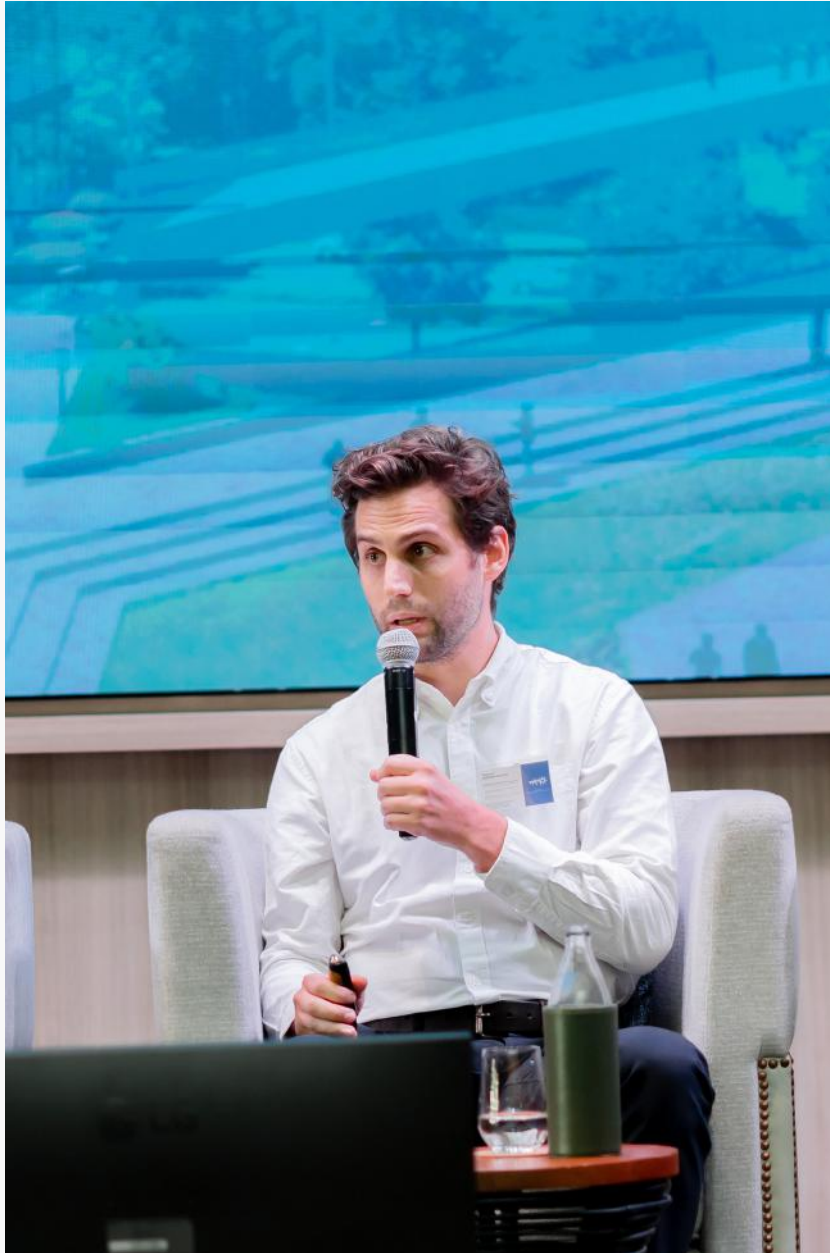

Scope 3 Emissions

- Carbon offsets (progressively removals only)

...e and do not commit the group to annual reduction targets. Proportions between scope 1, 2 and 3 are not exact to facilitate ...ories. All precise carbon footprint data are published in the Group's Universal Registration Documents, and CDP Climate ...accredited third party verifiers

VEOLIA
**CLIMATE CHANGE,
TIME TO ACT NOW**

GreenPath

With GreenPath, from Carbon, Veolia is acting on the entire decarbonization value chain, for a sustainable world.

With its comprehensive expertise in water, waste and energy, Veolia provides industrial, public and commercial players with solutions to reduce their direct and indirect greenhouse gas emissions, their energy consumption and their water footprint.

Industrial operations evolve and using environmental factors like carbon, water, waste and energy, Veolia can identify and propose the most appropriate decarbonization solutions, whether through energy efficiency, carbon capture or other innovative solutions, such as green hydrogen, to reduce their carbon footprint.

Working with regulatory bodies, Veolia helps clients to become more compliant with the European Green Deal.

VEOLIA
**ON-SITE SERVICES
TO INDUSTRIAL CLIENTS**

Water treatment
Waste management
Energy recovery
Air pollution control

This helps industrial clients to reduce their environmental footprint.

Veolia has a proven track record in providing on-site services to industrial clients.

**170 YEARS
OF HISTORY**

L'ORÉAL
FOR THE FUTURE

MAN Energy Solutions
Future in the making

Our Strategy
How we get the job done

Carbon Capture

In some sectors, avoiding or reducing CO₂ emissions is not an option.

Our Carbon Capture solutions enable clients to compensate unavoidable emissions.

Captured CO₂ can be sequestered or reused, thus forming the backbone of a carbon circular economy.

MAN Energy Solutions
Future in the making

Our Strategy
How we get the job done

Green Engines

Carbon-neutral propulsion requires not only green fuels, but also suitable engines.

Already today we offer green engines that are ready to operate on several synthetic fuels like Synthetic Natural Gas (SNG) or Methanol.

In 2024 we will introduce the world's first ammonia engine to the market.

MAN Energy Solutions
Future in the making

These are the technologies we rely on to help our clients achieving the target of 'net zero'.
