- > The lead off bull and sale feature of the 2025 Connealy Angus Spring sale. CORNHUSKER is a phenotype standout that offers extra frame, power, and performance in a Calving Ease package.
- > This 6.1-frame bull had individual ratios of 110 at weaning and 109 at Yearling in the Connealy herd.
- > He is backed by an eight-year-old highly productive Niagara daughter with an excellent udder and ratios of 103 at Weaning and 105 at Yearling.
- > Provides mating flexibility for daughters of many popular sires, including GROWTH FUND, HOMETOWN, TAHOE, STEP UP, VERACIOUS, TOP CUT, and Stellar females.

RESTORE's dam

- > An exciting Proven Calving Ease sire purchased in the 2023 Connealy Angus sale. > RESTORE is a proven Calving Ease sire whose progeny are big hipped, high volume, and structurally correct. He will hold mature size in check while adding muscle shape.
- > Excellent phenotype with a 5.9 frame, added muscle shape, depth of rib and length of body.
- > A pedigree that is stacked with generations of Maternal value, as displayed by his over 100 \$M.
- > His young dam has four calves on record with 104 Weaning, 101 Yearling and 103 for both Marbling and REA ratios.

- > One of Growth Fund's best sons that combines excellent phenotype with added performance and carcass merit.
- > RIVAL scanned an 8.39 IMF with a 232 ratio and a 16.9 REA for a 102 ratio, and his progeny are backing that up with 15 actual carcass records and over 150 ultrasounds ratioing 107 for IMF and 102 for REA.
- > While being a 6 frame, RIVAL offers extra stature, added muscle and depth of rib, with great structural correctness.
- > An excellent mating option for 14AN502 TAHOE daughters.

Understanding Angus Udder and Teat Scoring Data and How to Use the Information

By: Jerry L Emerich, Premier Select Sires Beef Specialist

On May 23rd the American Angus Association (AAA) released EPDs for two new traits, Udder Suspension and Teat Size. With the superiority of the Angus cow as the dominant maternal influence in the USA beef herd, these traits add more tools for cow/calf operations to continue to make corrective decisions in improving their herds.

To the right is an article produced by Angus Herd Improvement Records (AHIR) explaining how to collect and score these economically important traits. Both traits are scored on a 1 – 9 linear scale. Udder Suspension is scored from a "1" being very pendulous to a "9" being very tight. Teat Size is scored from a "1" being very large and misshapen to a "9" being very small.

The traits are then incorporated into EPDs including their percentile rank within the population. Lower values (<90%) indicate deep udders and large teats which can lead to lower productivity of the newborn calf due to increased difficulty in the ability to nurse. Higher values (>10%) indicate tighter attached udders and smaller teat size.

In making mating decisions and utilizing this data, one needs to keep in mind that "Extremes" are not always the best option. This is especially true for Teat Size. This is actually an "Intermediate Optimum" trait with a Linear score of 4 to 6 or an EPD in the 50 Percentile range actually resulting in more a desirable Teat Size. A "9" linear score or an EPD in the top 1 percentile range may actually be "too short" for a calf to effectively nurse.

If a producer has cows within their herd that have deep udders and/or large teats, one should select sires ranking high (>25% Udders and >50% Teat Size) for these traits. If cows already have shallow udders, continue to use the better Udder sires. If cows already have small teats, using sires closer to the "middle of the road" is the best option.

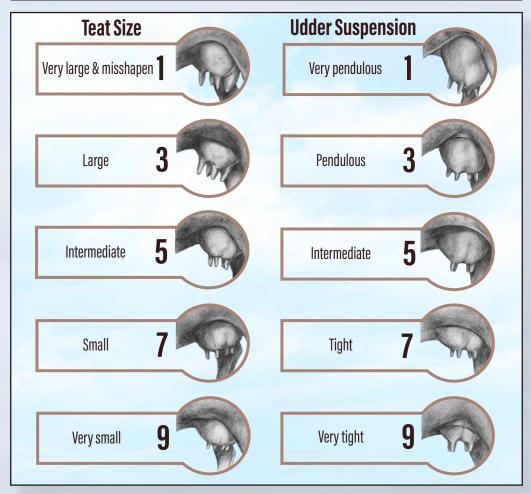

While this data is new to producers, there are still some unanswered questions. Continuing to use extreme shallow udders may not always be the best option either. One may want to check the Milk EPD in relation to Udder Suspension so one is not limiting milk production in the cow herd. Also, these traits need to be used in relationship with other important traits to a profitable cow herd, including Birth, Growth, Carcass and other important Maternal traits such as Foot scores, Heifer Pregnancy Rate, etc.

SCORING GUIDELINES

Teat and udder conformation are traits essential to a productive cow. Poor teat or udder quality may lower herd productivity, provides an opportunity to cull females, and increases difficulty for a newborn calf to suckle. The American Angus Association accepts udder scores from members through a simple two category system, teat size and udder suspension. The teat size and udder suspension are scored on the same quarter but are scored independently.

For SUBMISSION OF SCORES, they must be collected with 24 hours of calving. Teat and udder scores can be collected when collecting calf birth weight and calving ease data. Submit information through AAA Login.

> ALPHA is a rising star in our lineup and is building a reputation as a customer satisfaction sire for added performance and consistent phenotype both in purebred and commercial operations.

For those looking for a "bigger" bull, ALPHA offers the extra frame desired without sacrificing correctness and muscle shape.

ALPHA will add profit at weaning, yearling or on the grid and will leave daughters that are easy to handle and raise big calves. In a high market where every pound is a premium, ALPHA adds real profit to your bottom line.

- > AMSTERDAM is moderate framed, heavy muscled, and structurally sound. To validate his muscle definition, he ratioed 121 on his REA scan.
- His dam is a great young SPARTACUS daughter that recorded a 105 WW ratio. His granddam has posted impressive WW ratios of 5@108. The cow family is known for fertility, calf performance, and udder quality.
- Sired by the now deceased TAC Drifter, AMSTERDAM offers Calving Ease without sacrificing phenotype, growth, and carcass value.

- > As a proven bull, he's still got EVERY Profit Index ranking in the top 1% of the breed. The same goes for his SCF and Marbling EPDs. GOLD RUSH dominated the Hereford NRSP at Olsen Ranch and due to this, he's in use there again as a reference sire.
- > The top 1% CW and breed average MCW is a great place to be! Expect controlled cow size and more payweight when you use Gold Rush.

- > NEXT LEVEL is a moderate, thick young sire bred with an emphasis on growth and end-product merit.
- > Ranking in the top 1% of the breed for both Carcass Weight and Marbling, let NEXT LEVEL fetch you with bigger checks due to more pounds and higher grades
- An outcross to many pedigrees, Next Level offers a powerful skeletal design along

with high-end performance.

- > As a trait leader for a total of 14 traits, KID 9023 displays genetics that perform in any program of any breed.
- > Pay close attention to his data, EVERY carcass trait puts him in the top 5% of the breed and his blend of CED and growth is phenomenal. Then add extras like SC and TEAT and UDDR in the top 1% - wow!
- KID 9023 is a big, strong, good-footed, squarely-designed bull. His daughters are just like you'd expect. They look good, they raise heavy calves, and they do it with style.

EATONS MISS DAVIDELL 50779

> New for 2025, BUCKSHOT is a true genetic gem ranking in the top 10% or better for WW, YW, MILK, TEAT, CW, REA and MARB which lead to a top 3% rank for TSI.

- > BUCKSHOT is ideal in his size with yearling frame score of 6.2, offers extra muscle mass as well as added depth of body. He is very docile and easy to handle.
- > He is homozygous polled with exceptional phenotype, incredible data and actual performance! Combine that with his Udder and Teat predictions and BUCKSHOT is an easy sire to recommend and use!
