

About the exam

The exam is painless and uses dilation and a gentle eyelid opener. A specialized camera captures high-resolution images of the baby's eyes.

These images are analyzed by an experienced grader in Stanford University.

The expert grader may recommend a referral to initiate advanced preventative care by a specialist.

Pr3ventTM

Why is the Pr3vent exam important?

Pr3vent's advanced newborn vision exam allows for early detection, offering the possibility of intervention before vision loss occurs.

This maximizes your baby's chances of a happy and healthy life. You have peace of mind that no vision-threatening conditions are seen. Delayed diagnosis usually decreases the chances of successful treatment.

YOUR BABY'S
VISION
**IS A PRECIOUS
ASSET**
THAT DESERVES
ALL THE CARE

Benefits of the exam

Prevention

Early examination and referral prevents vision loss and blindness. Nearly all conditions are treatable early.

Protection

Vision drives child development. Pr3vent protects your child to enable normal childhood.

Precision

Early image-based assessments can be examined carefully without burdening the baby. Experts can deliver accurate assessments

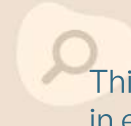

Advantages compared to the Red Reflex Test

A more complete exam is carried out by specialized ophthalmologists.

Most of the retina is visible in high-resolution images captured by our cameras.

This delivers **maximum accuracy** in early exams by expert graders.
