

# Computational and Parametric Design for Jewelry

A 3D rendering showing the design process of a ring. On the left, a wireframe model of a ring is shown in a light blue color. In the center, a solid blue ring is shown. On the right, a solid gold ring is shown. The wireframe model is connected to a control panel on the left. The control panel has a 'Bake 3D Signet Ring' button, a '3D RING' slider, and several dropdown menus: 'RING SIZES' (9 mm), 'OFF SET' (2.5 mm), 'Ring' (Make the Ring), and 'Guides' (Show Guides). Below these are several sliders: 'Top Ellipse' (checked), 'Top Rad 1' (8.0), 'Top Rad 2' (8.0), 'Move Up Top Circle' (7.8), 'Botom Arc' (checked), 'Move Up/Down Arc Bottom' (1.50), and 'Scale Bottom Arc Up/Down' (1.00). At the bottom center, there is a 'Content' button with a ring icon, a 'Result' button, and a 'Bake Content' button.

# This course is part of a **Micro-Minor**

In this course, you will have the opportunity to enhance your understanding of computational design and apply it specifically to the creation of jewelry and accessories.

To further improve and broaden your expertise in jewelry design using Rhino and Grasshopper, we recommend considering the **Micro-Minor**, which consists of five courses:

1. **Intermediate Rhino 8**
2. **Introduction to SubD in Rhino 7 and 8**
3. **3D Jewelry Modeling**
4. **Computational Design with Grasshopper**
5. **Computational and Parametric Design for Jewelry**

**Micro Minor**  
**Computational Jewelry Design**

These are the five courses included in this **Micro-Minor**

The banner features three 3D rendered rings: a blue wireframe ring, a solid blue ring, and a solid gold ring. The text is centered and uses a mix of bold black and red fonts.

Course Title	Instructor	Price
Rhino 8 Intermediate English	McNeel Miami	\$79.95
SubD in Rhino 7 & 8 English	Andres Gonzalez P	\$59.95
Modeling 3D Jewelry	Dulce A. Chavez	\$104.95
Computational Design with Grasshopper	Andres Gonzalez P	\$74.95

# Content

In chapters 1 through 6, you will revisit numerous concepts from the course on **Computational Design using Grasshopper**. If you feel confident in your understanding of this material, please proceed to **chapter 7**.

**Chapter 07:** Different ways to analyze curves

**Chapter 08:** Manipulating circles to create rings and bands

**Chapter 09:** Cutters

**Chapter 10:** Parametric orientation from one construction plane to another

**Chapter 11:** Create baskets and bezels

**Chapter 12:** Channels

**Chapter 13:** Woman and man dome rings

**Chapter 14:** Create bands with two 2D cross sections

**Chapter 15:** Twisted cables

**Chapter 16:** Create the surface for a ring = skin

**Chapter 17:** Let 's work with chains

**Chapter 18:** Signet ring with grasshopper3D

**Chapter 19:** Different ways we can create a pavé and prongs

**Chapter 20** Tips & Tricks: Create a toolbar and use the get-grasshopper-params

# Chapter 7: Various Methods for Curve Analysis

**7.01** Different ways of analyzing curves

**7.02** Different ways of dividing curves

**7.03** How to extend curves

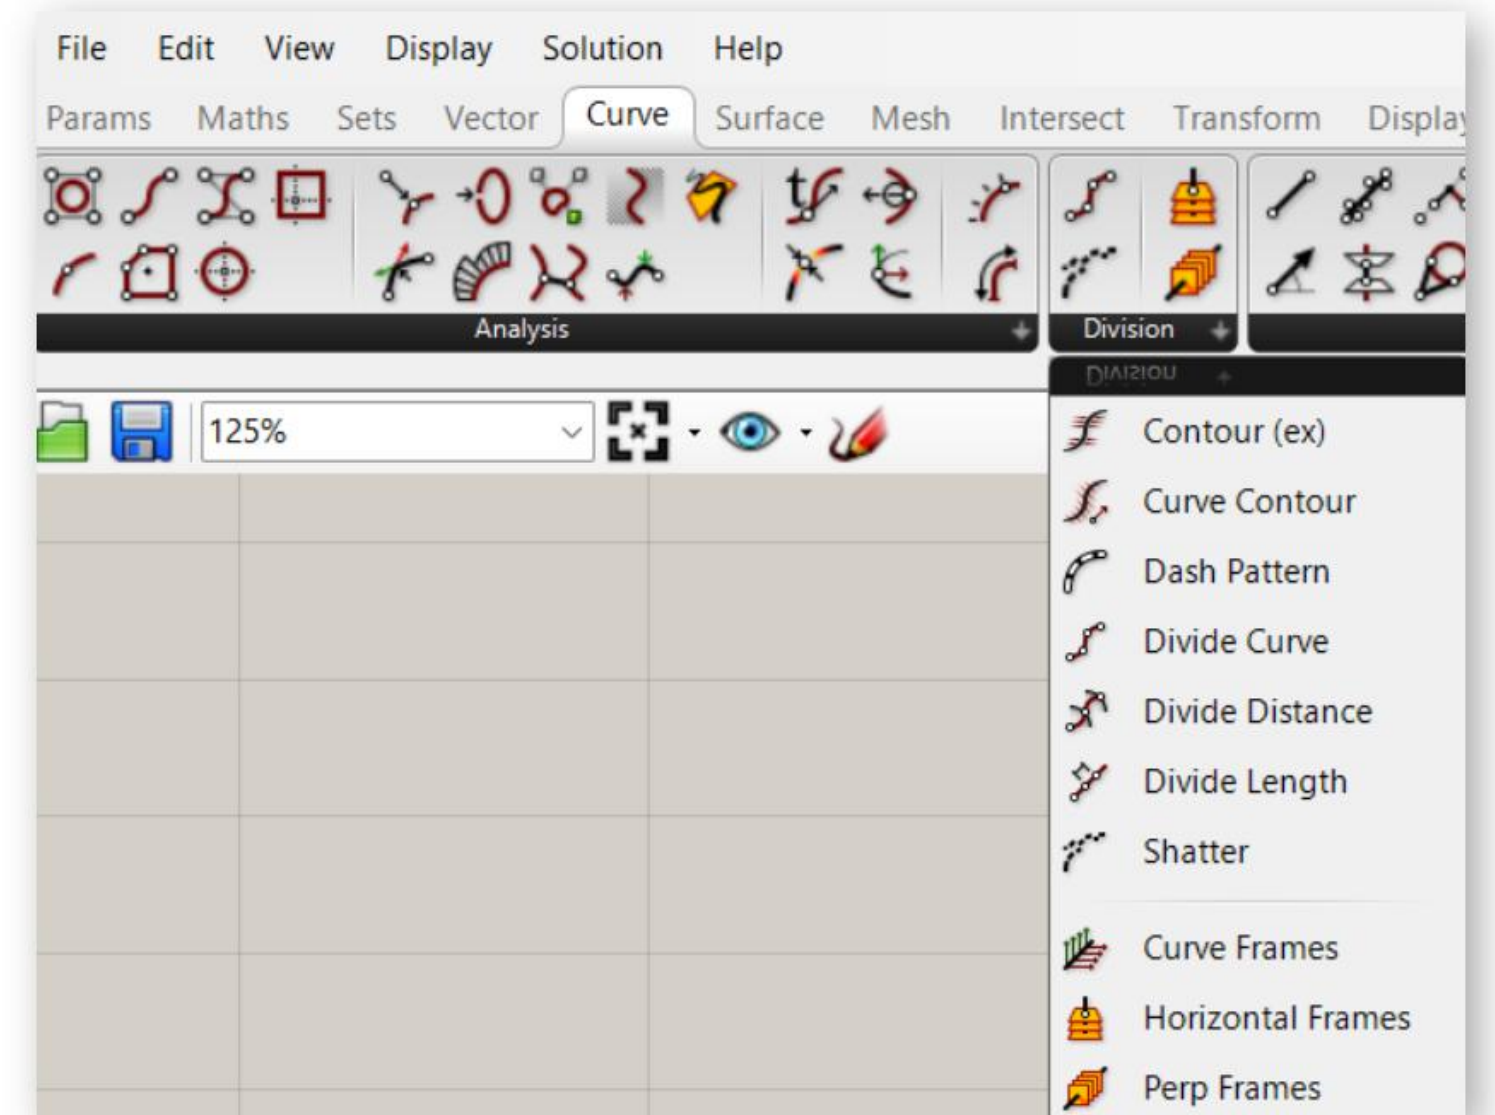

**7.04** Align construction planes

**7.05** The Evaluate length component

**7.06** Project [01]: Orienting circles in order with a guide curve and on top of a surface

**7.07** Project [02]: Organize multiple circles of varying diameters along a designated guide curve.

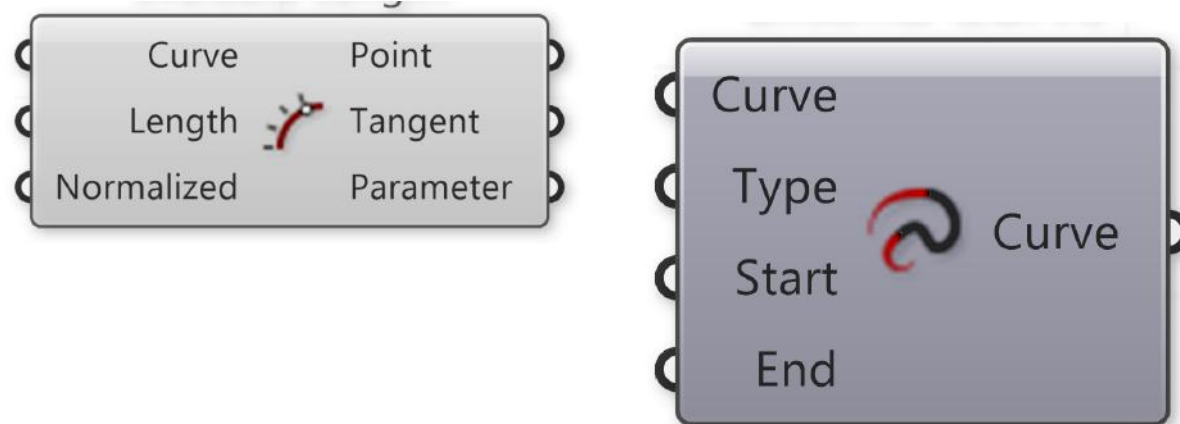

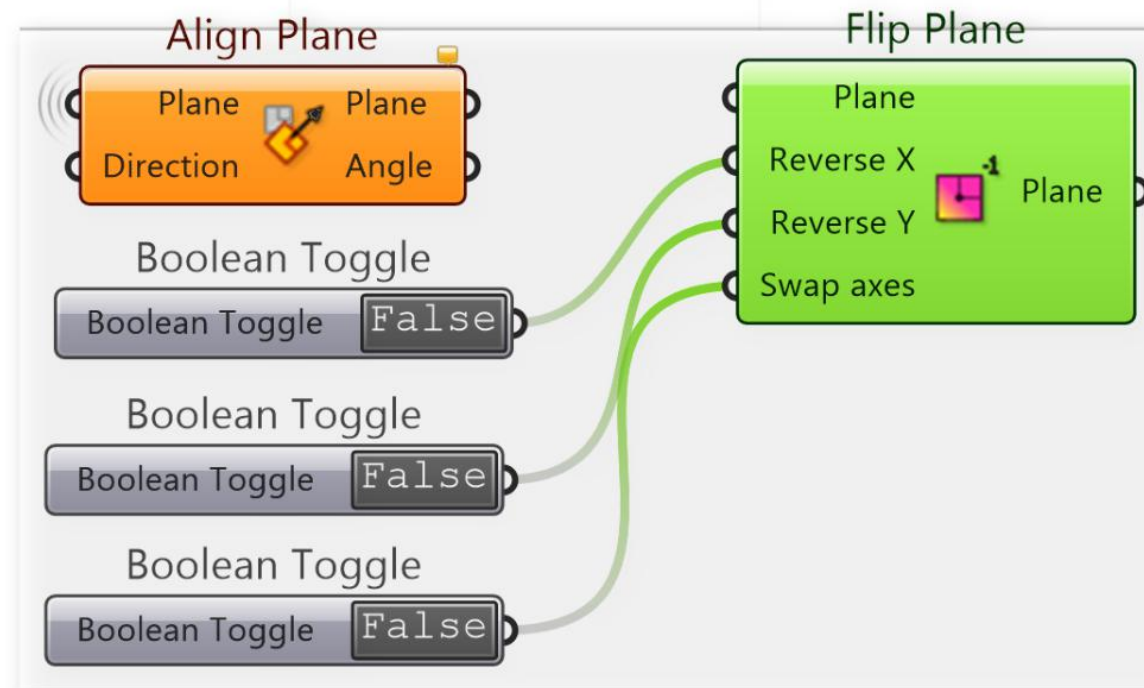

**7.08** Ask your teacher questions

# Curves

In this chapter, we will discuss **curves**, focusing on how to create, orient, modify the origin, and organize curves using parametric definitions in Grasshopper.

# Chapter 8. Manipulating circles to create rings and bands

**8.01** Create a list of ring size values

**8.02** Create very simple 3D band type of ring

**8.03** Project [01]: Create a 3D band ring with fillets, or chamfers

**8.04** Project [02]: Design a 3D band ring and create a corresponding area on the floor for its display

**8.05** Project [03]: A ring composed of multiple bands (plates) and screws

**8.06** Ask your teacher questions

## Circles and Rings

We will begin this section by manipulating circles, which help us create different ring sizes and thus model simple bands and rings with Grasshopper.

# Chapter 9. Cutters

**9.01** Adding guides on the stones and modeling a simple cutter in Rhino 8

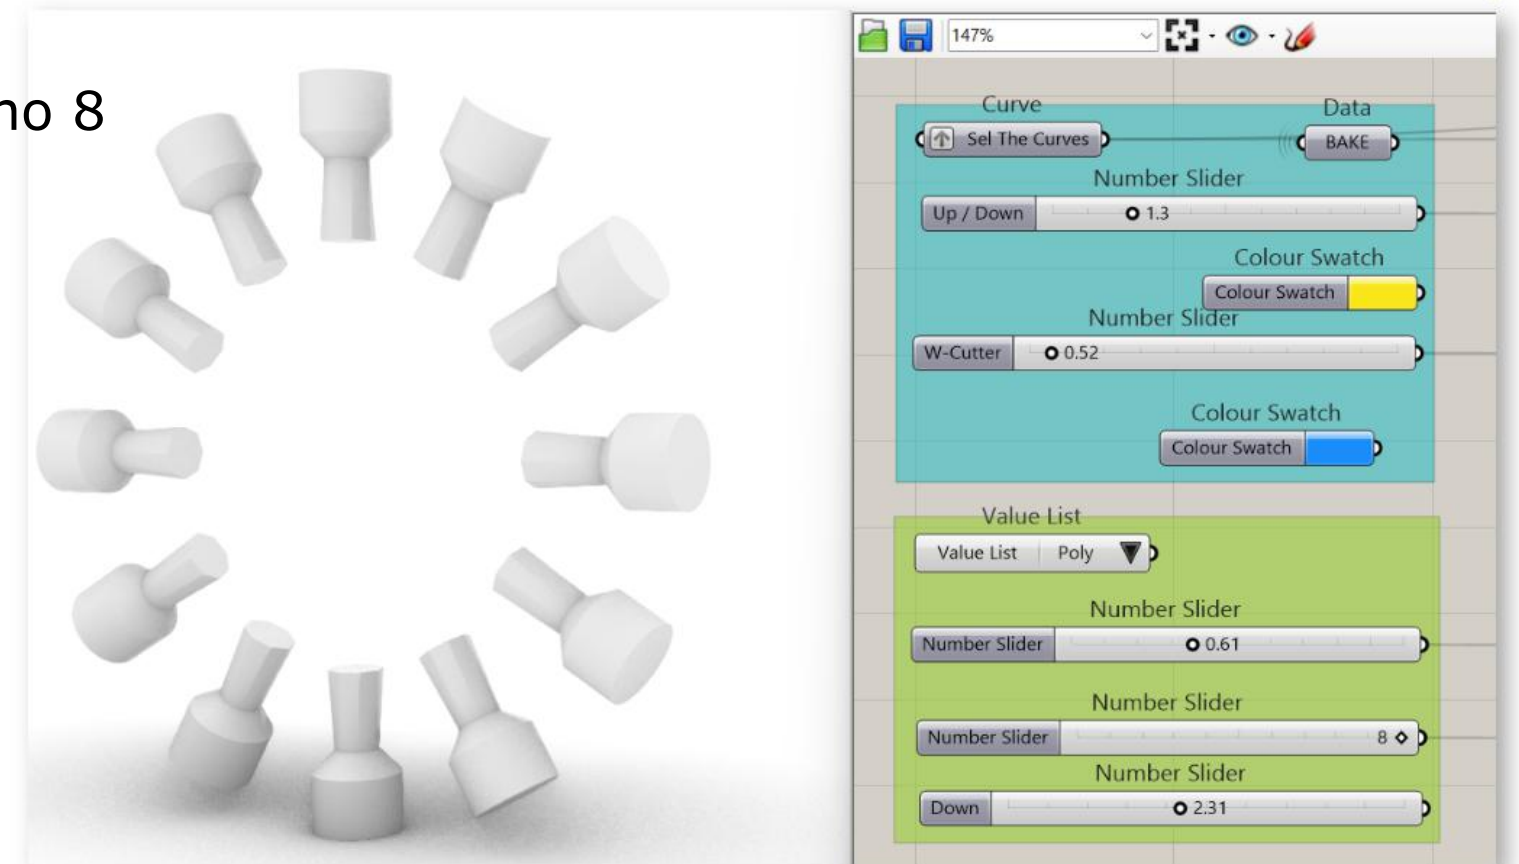

**9.02** Create our first simple cutter with Grasshopper

**9.03** Project [01]: Create a 3D solid cutter on any construction plane!

**9.04** Project [02]: Create a 3D solid cutter with different tips

**9.05** Project [03]: Let's polish the last definition of the cutter

**9.06** Ask your teacher questions

# Cutters

Cutters, as the name implies, assist in shaping sections and components of the stone to ensure a proper fit, while also allowing light to filter through the piece. In this chapter, we will utilize Grasshopper to create these cutters.

# Chapter 10. Parametric Orientation

**10.01** Finding where things are and where we want to orient them to!

**10.02** Project [01]: Orient a group of objects and be able to scale them

**10.03** Project [02]: Being able to **Bake** more easily

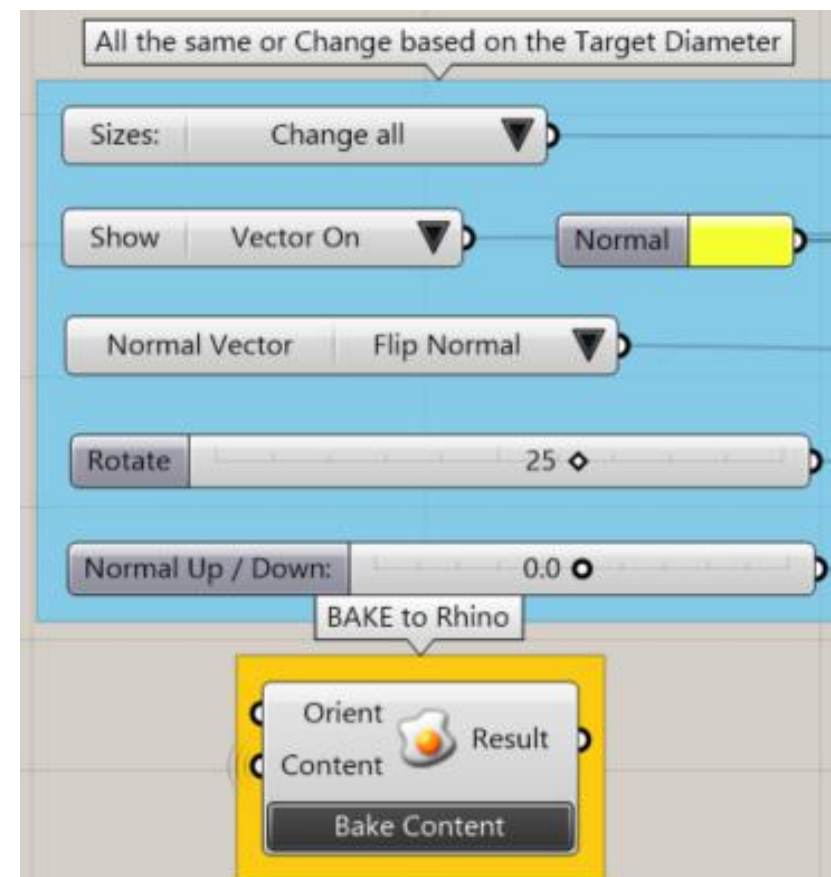

**10.04** Ask your teacher questions

# In this chapter we are going to **orient objects**

We will develop parametric definitions using Grasshopper to facilitate the orientation and scaling of objects between construction planes. This process will involve orienting gems, cutters, or supports and seamlessly baking them into Rhino 8.

# Chapter 11. Create baskets and bezels

**11.01** Simple basket, but let's fix a few things first!

**11.02** Have the possibility to put cutters and make holes to my basket

**11.03** Project [01]: Polish my basket definition and set the automatic **Bake**

**11.04** Project [02]: Create a basket with SubDs

**11.05** Project [03]: Creating a simple bezel

**11.06** Project [04]: An idea to add the claws [Prongs] to the baskets or bezels

**11.07** A new way to join solids, meshes, breps, and SubDs with **ShrinkWrap**

**11.08** Ask your teacher questions

## Baskets and Bezels

We will develop a variety of classic mounts, including the bezel mount, basket mount, and supports designed to protect and secure the gemstone.

# Chapter 12. Channels

**12.01** Create a basic channel

**12.02** Channel with option to rotate the cross sections and cap the endings

**12.03** Basic channel with a closed curve guide and assign a material to the channel

**12.04** Ask your teacher questions

## Rings as Channels

We will begin by developing bands with various two-dimensional profiles using Grasshopper.

# Chapter 13. Woman and man Dome Rings

**13.01** First draw the curves to create a dome ring

**13.02** Continue with the DEF from 13.01 and create the female ring

**13.03** Project [01]: Optimize, organize and implement the cache **Bake**

**13.04** Project [02]: Cut the top of the ring

**13.05** Ask your teacher questions

## Dome Rings

The dome ring is a timeless design characterized by its rounded top. In this chapter, we will explore a step-by-step guide on how to create it using various profiles, along with the application of different materials.

# Chapter 14. Create bands with two 2D cross sections

**14.01** Use a circle and an ellipse to create first, the wireframe

**14.02** Time to create the two mapping rectangles, to orient my 2D sections

**14.03** Use **Sweep-Two** rails and the rectangular mapping component

**14.04** Project [01] Using the Orient component, Sweep by two rails, and Scale in XYZ

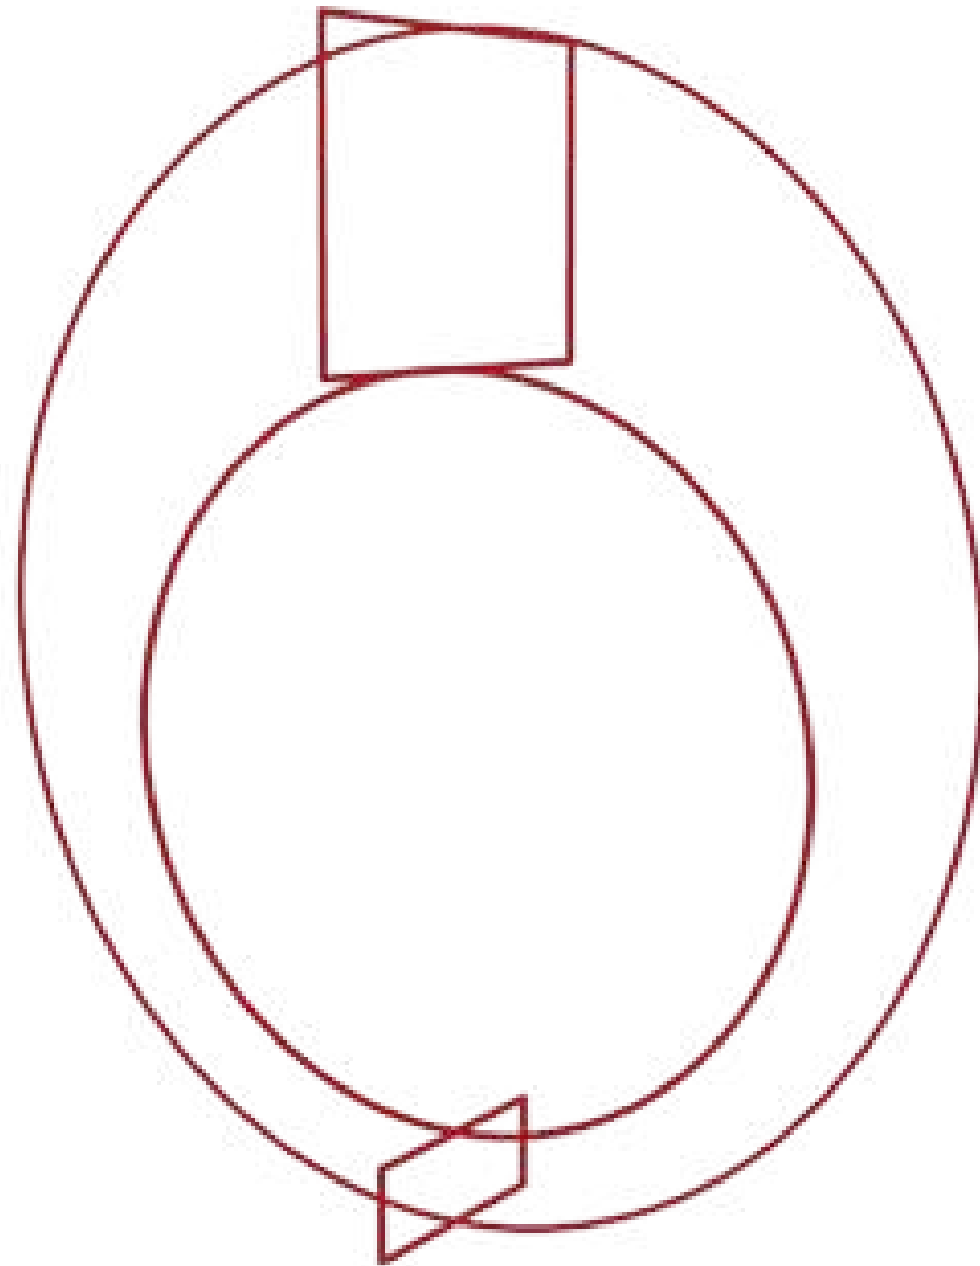

**14.05** Ask your teacher questions

## Dome Rings with Two Sections

In this chapter, we will further develop dome rings and bands by integrating two sections along with the Sweep 2 Rails component.

# Chapter 15. Twisted cables

**15.01** Part one, we will create the solids that we want to twist

**15.02** Part two, we will twist the solids created in the first part

**15.03** The last part is to flow the twisted rods, around my rail

**15.04** Project [01]: Create two Sub-Curves, rotate them apart, and join them

**15.05** Project [02]: Quickly create a circle and a surface for a ring

**15.06** Ask your teacher questions

## Interlaced Ring

In this chapter, we will design interlocking rings composed of various shapes and curvature styles, while also incorporating materials to enhance their presentation.

# Chapter 16. Create the surface for a ring

**16.01** Create the surface of the ring we want to use

**16.02** Set the domain of the surface we want to use

**16.03** Create the 3D boxes that we will use to place our 3D tiles

**16.04** Project [01]: Use the wired boxes to place **SubD-Pipes**

**16.05** Project [02]: Being able to use open 2D cross sections to generate our surface

**16.06** Project [03]: Bracelet with waves

**16.07** Ask your teacher questions

## Internal Surfaces

Utilizing various 3D solid tiles, we will construct three-dimensional box containers to strategically orient these tiles.

# Chapter 17. Let us work with chains

**17.01** Define the section of the curve that we will use in the chain

**17.02** Choose the 3D block to generate our chain

**17.03** Project [ 01]: Being able to select 2 different blocks, to design my chain

**17.04** Ask your teacher questions

## Chain Links

We will develop the original solid that will serve as the foundation for creating a chain, employing various techniques that allow for movement and rotation of the solids.

# Chapter 18. Signet ring with grasshopper

**18.01** Create the first curves needed for our signet ring

**18.02** Create the center curve of our signet ring

**18.03** Create the blends on the front of the ring and the solid-pipe for the size of the ring finger

**18.04** Create the blends on the right side and use the NetWork component to create the first surface

**18.05** Union all surfaces and create a solid then, apply materials and **BAKE!**

**18.06** Project [01]: Polish your grasshopper definition and add the possibility to **BAKE!**

**18.07** Ask your teacher questions

## Signet Ring

The signet ring is like the classic VIP pass for your fingers, perfect for showcasing symbols, text, or dazzling gems! In this chapter, we're diving into the magical world of Grasshopper to whip up some snazzy signet rings using a parametric definition. Let's get our creativity buzzing!

# Chapter 19. Different ways to create a Pavé and the Claws [Prongs]

**19.01** Create a simple 2D Pavé

**19.02** Adding the supports [Prongs] to the 2D Pavé

**19.03** Project [01] Using the Duplicate-Points component in the above definition

**19.04** Bringing a Pavé that is in 2D to a region of a surface

**19.05** Project [02] Design and create a Scalloped Pavé

**19.06** Project [03] A Scalloped Pavé using the rectangle and a taper components

**19.07** Let's understand an equidistant triangle to create our Pavé

**19.08** Let us use **Paneling Tools** a plugin, to create our Pavé in 2D and 3D

**19.09** Project [04] Create a Pavé using Kangaroo2

**19.10** Ask your teacher questions

# Pavé and Supports

Explore the techniques for creating classic settings, including pavé and scalloped pavé.

**PanelingTools**  
for Rhino and Grasshopper

# Chapter 20. Tips & Tricks: Create a Toolbar and use the Grasshopper Player

**20.01** Create our resources folder for our libraries. Set the [Path]

**20.02** Some Get parameters that we need in order to use the **Grasshopper-Player**

**20.03** Create a toolbar with some buttons to speed up our work

**20.04** Project [01]: Link or join a toolbar with buttons to another toolbar

**20.05** Project [02]: Create a **GH-Player** definition and add a button to a toolbar to run the **GH-Player** definition

**20.06** Project [03]: How to orient text on a surface

**20.07** Ask your teacher questions

## Techniques using the Get-Params

Dive into the magical world of toolbars! Discover how to whip up your very own toolbar and stick those shiny GH Player definitions to its buttons. Plus, let's sprinkle in your gems, materials, and cross sections straight from this snazzy toolbar!
