ELITE 3.0 SKATEX

Choice of champions.

Alpina has integrated the new binding system into the Elite 3.0 SkateX.

With Alpina Elite 3.0 SkateX and Rottefella binding system, you save energy, so that you skate efficiently for longer and have the extra power all the way to the finish line. The optimized Elite 3.0 SkateX boot and Rottefella binding system ensure optimal power utilization with each stride allowing for more effortless movement.

Rottefella SkateX is a groundbreaking innovation. It is the first system developed exclusively for the skate skiing style. The new system and the adjusted and reinforced carbon fiber chassis will give you better lateral stability and improved balance compared to the existing NNN binding system.

REINFORCED ALPINA ELITE SKATE CHASSIES

INTIGRATED ROTTEFELLA SKATEX BINDING SYSTEM

At the heart of SkateX lies its groundbreaking connection point, strategically relocated beneath the ball of the foot for enhanced performance. Departing from traditional systems like NNN, SkateX adopts a configuration akin to professional ice skating and cycling, ensuring a superior level of stability, control, and power transfer.

By minimizing the distance between the ski connection and the ankle, SkateX imbues your skiing with newfound agility and responsiveness. The wider locking mechanism not only enhances stability but also facilitates a more efficient transmission of power, propelling you forward with unprecedented speed and precision.

Moreover, SkateX introduces MOVE Tune technology, empowering you to fine-tune the binding position with ease. Whether you're navigating varied terrain or adjusting to changing snow conditions, MOVE Tune enables you to optimize performance according to your unique technique and preferences.

REDUCED GAP BETWEEN THE BINDING AND THE ANKLE ENHANCES RESPONSIVENESS
