

# INDOOR

2021

Our designs is about making people happy,  
either functionally, aesthetically, or emotionally.

DESIGN IS  
NOT JUST  
LOOKS.  
DESIGN  
IS HOW IT  
WORKS.

# OUR STORY

Cinas was founded under the name Carl J. Nielsen in 1903. Since the 1980s, the company has developed into the design, import and distribution company that we see today.

All of our products are made with carefully selected manufacturers in the Far East, where the cooperation has functioned for generations. High-quality requirements are incorporated into this network, ensuring that our products always live up to our quality and finishing standards.

We focus on furniture and accessories that emphasize their simplicity and functional expression, but still with a stylish edge with our design philosophy in mind: "A design is incomplete until someone uses it."

# INDOOR

Our indoor collection is known for combining innovative materials and commercial designs. All products are designed to fit into every contemporary setting. The collection consists of a wide range of commodities – from durable carbonized bamboo to painted mahogany, teakwood and eco-friendly recycled polyester. The collection balances a strong focus on environmental concerns with Scandinavian aesthetics. Results from this comes alive in this 2021 indoor collection which favors function, comfort, CSR and style.

Even though Cinas was founded more than 100 years ago, we still aim at keeping the standards high and the prices affordable with a high emphasis on reliability. That's the Cinas DNA.

# WHY BAMBOO?

- *Highly sustainable furniture in a world of increasing consumption.*
- *Bamboo is the fastest growing plant in the world. It can be harvested after four years and regenerates from the roots.*
- *Bamboo is CO<sub>2</sub> neutral throughout its lifetime from sprout to disposal.*
- *Buying a piece of bamboo furniture contributes positively to reducing global CO<sub>2</sub> emission.*

# OUR MATERIALS

*“A product’s lifetime is crucial to the environmental load. It is a going concern if the aim is to operate in the most sustainable way possible.*

*Products in use for a long time lead to a significantly less environmental impact than those wasted after a few years and needing regular replacement. The joy and satisfaction of a product that also stays spectacular and functional year after year, just gives sustainability a different meaning.”*

## MAO ZHU, BAMBOO (CHINA)

Bamboo grows extremely fast and is ready to harvest in 4-6 years. Bamboo regenerates itself from its existing root system and is one of the fastest growing plants on earth. Giving 25 times more wood per hectare per year than traditional hardwood forests, it is an extremely sustainable material, and our natural choice for furniture.

Fresh bamboo has a yellowish natural color, however, the bamboo we use for our furniture has gone through a steaming process (carbonizing) to gain the warm glow similar to untreated oak or teakwood.

### **Vertically carbonized bamboo**

We have developed vertically carbonized bamboo production for use in our furniture. The vertical bamboo strips are glued and pressed together giving a slim and straight-line pattern with subdued bamboo shoot visible at the surface.

## MAHOGANY & TEAK WOOD

There are good reasons for selecting products made from wood. As well as being a beautiful, vibrant and natural material that feels good to touch, wood is a renewable resource. Unlike many other materials based on oil, coal or metals, wood is sustainable, recyclable, and decomposes naturally. From the perspective of climate control, our willingness and determination to manage forest resources is crucial, and consumers and producers need to know whether a piece of timber has sustainable origins.

Certification systems backed by the EU and responsible timber producing countries document the path from forest to consumer, and Cinas has a firm policy in this regard. All of our timber and finished wood products are procured from producers covered by the two.

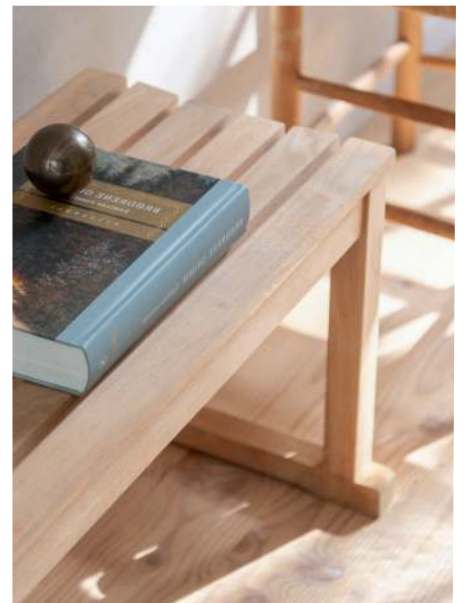

## POLYESTER FELT

We began making felt baskets containing recycled polyester from plastic waste in 2010 – in order to transform waste into stylish products. Plastic is made from oil, which is a limited resource. A composition of new supplies combined with recycled material is carded into small threads, pressed and heated into polyester felt material. The end product becomes soft, strong and helps regain wasted resources into new consumer products.
