BATTERY SUPPORT UNITS

24V Battery Balancing in 2-3 hours

Uneven balance between multiple batteries can result in premature failure

Increased reliability

Healthy Batteries

GYSFLASH PRO BALANCING SYSTEM ref: 085565

Balanced charging with the GYSFLASH Pro in 2 hours

The GYSFLASH Pro 24V Balancing System delivers 100 amps of balanced charging power across both batteries, achieving a balanced charge in as little as two hours - enabling battery balancing to be completed alongside routine servicing. Traditional chargers, which output only 10-15 amps, may take up to 10 hours, but the GYSFLASH Pro's advanced 100-amp performance reduces this time by 10x while ensuring a balanced, coordinated charge.

Why GYSFLASH Pro Balancing?

1. Speed - High 100-amp output reduces charge times significantly, supporting rapid turnaround in commercial service.
2. Traceability - Advanced software provides full traceability, enabling operators to track each vehicle's charging and balancing history.
3. Updatable Software - Regular software updates keep the system current with the latest charging technology.
4. Multiple Charging Curves - Supports a variety of battery chemistries, including lithium, lead-acid, AGM, EFB, and gel, ensuring compatibility with diverse commercial vehicle batteries.

BATTERY TESTERS

Battery issues are the **No.1** cause of breakdown calls

Modern batteries are under more and more pressure to power the ever-growing electronics systems in a modern vehicle. Testing should be an integral part of any vehicle service, but many testing units are not suitable for modern batteries. Testing every vehicle's battery when it comes into a workshop not only provides a fantastic service to your customers, but can also increase your battery sales considerably and prevent an imminent breakdown for your customer.
