## Welcome to Hillhead 2024

As usual in a Hillhead year, the June edition of *Quarry Management* departs from its familiar monthly format to become the exhibition's 'Official Show Guide', containing all the information you need to make the most of your time at the show and providing an invaluable source of reference material long after the event is over.

### 2 Visitor Information

Essential information for all visitors to Hillhead 2024.

### 4 Hillhead Quarry Site Plan

Map of the main showground showing stand numbers and other key locations.

### 6 Pavilion Plans

Detailed plans of the Showground and Registration Pavilions.

### 8 List of Exhibitors

A complete alphabetical listing of exhibitors and their stand numbers.

### 17 Hillhead Spotlights

Twenty-one pages focusing on just a few of the new products and services on display at this year's show, plus key contributions from IQ, QNJAC, Tarmac and BDS.

### 51 A-Z Exhibitor Listings

A guide to all exhibitors at Hillhead 2024.

### 172 Product Locator

Looking for a particular product, equipment or service? Use the product locator pages to find out who is showing it.

### Penny Lewin 1954–2023

Penny, Hillhead's former event operations manager, passed away last year following a short illness. She was involved in Hillhead from its conception in 1982 until her retirement in 2017.

Hillhead was one of her 'happy places' and she took great pride in the success of the event that she helped create. She is a much missed and respected member of the QMJ family.

She'll be wishing you all a great show!

All advertisements are assumed to be bona fide by the publishers who reserve the right at their sole discretion to refuse to accept advertisement copy which is not considered suitable for publication in this journal. The QMJ Group Ltd supports the quarrying industry's 'Target Zero' health and safety initiative. *Quarry Management* is printed by Buxton Press Ltd.

# Visitor Information

## Open times

Tuesday 25 June: 09:00–17:30  
Wednesday 26 June: 09:00–17:30  
Thursday 27 June: 09:00–16:00

## Accessibility

Disabled visitors and those requiring assistance should contact the organisers in advance. Mobility scooters will be available to hire on site and can be pre-booked online at [www.hillhead.com/visit/accessibility](http://www.hillhead.com/visit/accessibility)

## Children

Children under the age of 16 will not be admitted to the show.

## Dogs

Unless required for assistance, dogs are not permitted on-site at any time.

## Safety

The ground is uneven and consists of loose rock and gravel. We request that visitors wear sturdy, suitable footwear. Sandals, flip-flops, high-heels and pumps are not appropriate and may cause injury.

Also allow for British summer weather – rain coats and sun cream.

## Travel – Air

The closest airports are Manchester (MAN) 49km and East Midlands (EMA) 89km.

Contact [hillhead@qmj.co.uk](mailto:hillhead@qmj.co.uk) for helicopter landing information and co-ordinates.

## Travel – Rail

Buxton train station is 3km from Hillhead with regular services to/from Manchester. UK train tickets can be booked online at [www.nationalrail.co.uk](http://www.nationalrail.co.uk)

## Travel – Road

Hillhead is 3km south of Buxton off the A515 (Ashbourne road). The postcode for Sat Nav systems is SK17 9PR.

## Parking

Free parking is available adjacent to the showground. Shuttle buses will operate on show days to and from the Registration Pavilion.

Sponsored by

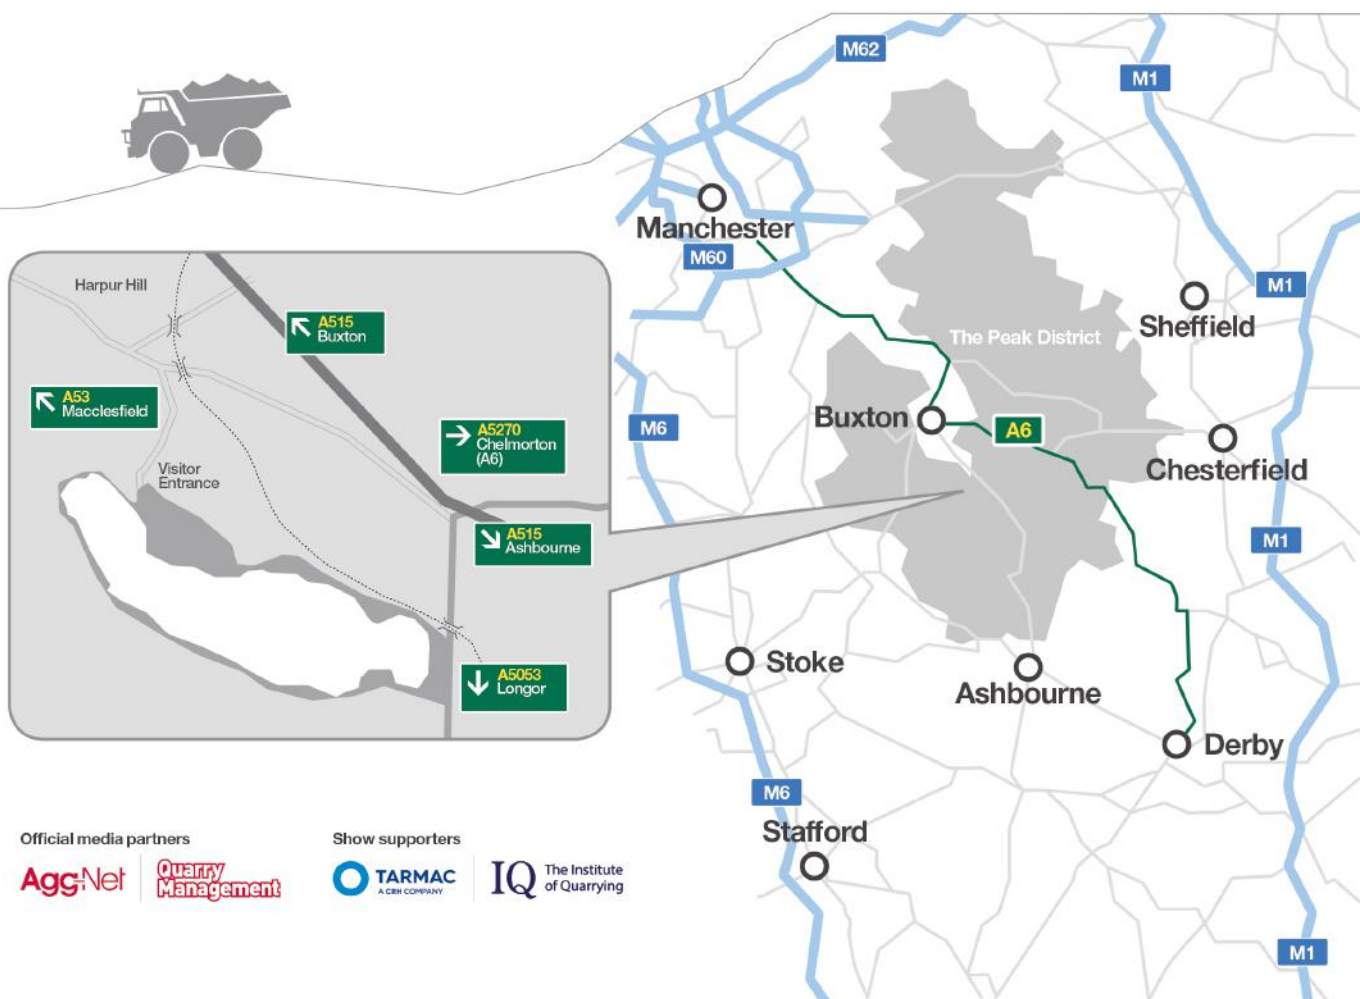

## Taxi

We advise visitors requiring taxis to book in advance. A list of local companies can be found at [www.hillhead.com/visit/travel](http://www.hillhead.com/visit/travel)

## Wi-Fi

Free Wi-Fi hotspots are available across the site.

## Hillhead Quarry Site Plan

## Showground Pavilion

The diagram illustrates a network infrastructure layout with the following components and connections:

- PA Section (Top):** PA1, PA3, PA7, PA9, PA11, PA13, PA15. PA1 is connected to PA3, PA7, PA9, PA11, PA13, and PA15. PA3 is connected to PA7, PA9, PA11, PA13, and PA15. PA7 is connected to PA9, PA11, PA13, and PA15. PA9 is connected to PA11, PA13, and PA15. PA11 is connected to PA13 and PA15. PA13 is connected to PA15.
- PA Section (Middle):** PA2, PA4, PA6, PA8, PA10, PA14, PA16, PA18, PA20. PA2 is connected to PA4, PA6, PA8, PA10, PA14, PA16, PA18, and PA20. PA4 is connected to PA6, PA8, PA10, PA14, PA16, PA18, and PA20. PA6 is connected to PA8, PA10, PA14, PA16, PA18, and PA20. PA8 is connected to PA10, PA14, PA16, PA18, and PA20. PA10 is connected to PA14, PA16, PA18, and PA20. PA14 is connected to PA16, PA18, and PA20. PA16 is connected to PA18 and PA20. PA18 is connected to PA20.
- PA Section (Bottom):** PA21, PA23, PA25, PA27, PA29, PA31. PA21 is connected to PA23, PA25, PA27, PA29, and PA31. PA23 is connected to PA25, PA27, PA29, and PA31. PA25 is connected to PA27, PA29, and PA31. PA27 is connected to PA29 and PA31. PA29 is connected to PA31.
- PA Section (Right):** PA26, PA28, PA30, PA32, PA34, PA36, PA38, PA40, PA42, PA44, PA46, PA48, PA50, PA52. PA26 is connected to PA28, PA30, PA32, PA34, PA36, PA38, PA40, PA42, PA44, PA46, PA48, PA50, and PA52. PA28 is connected to PA30, PA32, PA34, PA36, PA38, PA40, PA42, PA44, PA46, PA48, PA50, and PA52. PA30 is connected to PA32, PA34, PA36, PA38, PA40, PA42, PA44, PA46, PA48, PA50, and PA52. PA32 is connected to PA34, PA36, PA38, PA40, PA42, PA44, PA46, PA48, PA50, and PA52. PA34 is connected to PA36, PA38, PA40, PA42, PA44, PA46, PA48, PA50, and PA52. PA36 is connected to PA38, PA40, PA42, PA44, PA46, PA48, PA50, and PA52. PA38 is connected to PA40, PA42, PA44, PA46, PA48, PA50, and PA52. PA40 is connected to PA42, PA44, PA46, PA48, PA50, and PA52. PA42 is connected to PA44, PA46, PA48, PA50, and PA52. PA44 is connected to PA46, PA48, PA50, and PA52. PA46 is connected to PA48, PA50, and PA52. PA48 is connected to PA50 and PA52. PA50 is connected to PA52.

## Registration Pavilion

The floor plan shows a central corridor (RD) with rooms (RC) on both sides. The Entrance/Exit is at the top, leading to a Registration area and a Badge collection area. The plan includes a large 'i' icon near the center, likely indicating an information desk. The rooms are labeled as follows:

- Entrance/Exit** (Top center)
- Registration** (Top right)
- Badge collection** (Top right, marked with a blue circle)
- RC1** through **RC25** (Various rooms along the central corridor and sides)
- RA1** through **RA13** (Rooms on the right side)
- RE1** through **RE4** (Rooms on the left side)

# Biggest ever JCB X Series to debut at Hillhead

At Hillhead 2024, JCB will showcase their biggest and most powerful X Series tracked excavator yet – the 370X. Headlining on the JCB stand and in the show's demonstration area, the 370X is a heavy-duty earthmover that brings industry-leading levels of productivity, durability, and reliability to the 35–40-tonne sector.

Powered by a Stage V/ Tier 4F 240kW (322hp) diesel engine that delivers 14% more power, JCB say the 370X can move 4.5 tonnes more material per litre of fuel than competitive models. It features the new JCB UX user interface with 10in colour touchscreen display and controls, increased hydraulic pressures to boost performance in hard digging, and extended

service intervals for improved total cost of ownership.

The new model will be joined at the show by an extensive line-up of JCB machines for the quarrying, construction, and recycling sectors, including JCB's new Dual Drive backhoe loader, new Hydradig with Raptor tilt-rotator, and the prototype backhoe loader powered by JCB's hydrogen combustion engine.

Further products from the manufacturer's Loadall telescopic handler, backhoe loader, tracked excavator, wheeled loading shovel, site dumper, compaction, power generation, and compact equipment ranges will be shown across the stand, demonstration area, and at the quarry face.

The new heavy-duty JCB 370X tracked excavator will make its debut at Hillhead 2024

# Ground-breaking Wirtgen Group solutions for road construction

Smarter. Safer. More Sustainable. This is the theme of the Wirtgen Group's appearance at Hillhead 2024. Amongst other things, the focus from 25–27 June will be on exciting premieres for the British market, including the world's first burner that can be fuelled exclusively with green hydrogen. As well as this, visitors to the show will be able to take a closer look and discover more about the digital solutions from the Wirtgen Group.

On the road to making the future of road construction more sustainable, the greatest leverage potential lies in the field of asphalt production. With the world's first burner that can be fuelled exclusively with green hydrogen, Benninghoven present a ground-breaking solution for the future that is already on the market today. Alongside the latest generation of burners for use with alternative fuels, the special presentation on the stand will also showcase further technologies for sustainable asphalt production.

The new Mobirex MR 100(i) NEO/NEOe mobile impact crusher is also making its debut appearance in the UK

at Hillhead 2024. Thanks to its compact dimensions and a low transport weight, the MR 100(i) NEO/NEOe can be used flexibly and quickly in a wide variety of applications. Operation in tight spaces or in frequently changing places of work is easily possible, whilst applications range from different recycling tasks, such as the

processing of concrete, rubble, and asphalt, to the processing of soft to medium-hard natural stone. All-electric operation is possible with the Mobirex MR 100(i) NEOe variant.

Also celebrating their premieres at Hillhead are two Vögele road pavers. One is the MINI 500 compact paver, a machine that, with a minimum

paving width of only 0.25m, is predestined for working in the tightest spaces on particularly small construction sites, whilst the other is the new Dash 5 generation SUPER 1900-5(i) Highway Class paver, which, with paving widths of up to 11.5m, is deployed primarily on motorways or other large-scale infrastructure projects.

Alongside machine efficiency and alternative applications and methods, digitalization and connected system solutions are important drivers for more sustainability in the road construction process chain. 'Digital assistance systems, telematics solutions, and the automation of processes will contribute to an increase in the efficiency and cost-effectiveness throughout the road construction process chain and simultaneously further reduce CO<sub>2</sub> emissions,' explained Paul Holmes, managing director of the British Wirtgen Group subsidiary, Wirtgen Ltd.

'The Wirtgen Group have a roadmap for this and will play a decisive role in the advancement of the digital transformation as a driver of innovation in the road construction industry.'

The new generation of burners from Benninghoven allow the use of up to four different fuels

## Doppelmayr RopeCon solution for Bardon Hill Quarry

Bardon Hill Quarry, near Leicester, is one of the UK's oldest continuously operated quarries. Owners Aggregate Industries UK Ltd have recently developed a new quarry extension at this strategically important site. In order to sustain quarrying activities, a separate material handling system was required to extract, process, and transport overburden for emplacement within the existing quarry as part of its restoration.

Hillhead 2024 exhibitors Doppelmayr Transport Technology worked closely with Aggregate Industries to develop a unique solution that dramatically reduces CO<sub>2</sub> emissions and environmental impact compared with road haulage or the footprint associated with a conventional surface conveyor system.

The proven RopeCon system is a combination of ropeway technology and

The Doppelmayr RopeCon solution at Bardon Hill Quarry transports up to 1,000 tonnes of overburden per hour, reducing environmental impact and CO<sub>2</sub> emission

conventional conveying technology. The first installation of its kind in the UK, at Bardon Hill it spans the entire pit and transports up to

1,000 tonnes of overburden per hour. During the life of the operation, the RopeCon track ropes will be periodically re-tensioned, allowing the system

to be lifted above the placed material. This ability to control the drop height minimizes the impact from noise and dust during operation of the system.

## New excavator and wheel loader additions from CASE

The new CASE 651G Evolution wheel loader fills a gap between the 621G and 721G

At Hillhead 2024, CASE will have a wide spread of equipment on display, both static on the stand and working in the exhibition's waste and recycling area, the secondary rock handling area, and in Crusher Alley, where blasted rock will be processed.

While CASE will display a wide range of excavators, from mini and midi compact models through to larger heavy crawler machines, much of the focus for the show will be on the new CX210E-S tracked excavator. This 'Essential'

excavator retains all the power and performance of the standard CX210E yet boasts an increasingly competitive price point and a simplified list of options. Built with heavy-duty components throughout, the machine delivers all the performance, operator comfort, and productivity that customers expect.

Meanwhile, customers looking for a premium wheel loader will be drawn to the new 651G 'Evolution'. Built to sit between the proven 621G and the 721G, the 651G boasts

increased loading performance, thanks to reinforced front and rear chassis sections, plus heavy-duty axles as standard with a choice of locking differentials. The machine delivers class-leading productivity and economy.

Other wheel loaders will be on display, from the largest models to the latest compact loaders. Visitors to the stand will be able to glimpse into the future of compact equipment too, with the first CASE fully electric compact shovel on display. The battery-powered

12E V will join the company's electric mini-excavators in a growing zero-emission CASE line-up. Keen operators will also be able to try their hand at the controls of the compact machinery, in an exciting, fun operator challenge that will take place on the stand throughout the event.

CASE's equipment lines will be backed up by the full range of CASE parts and service solutions, along with CNH Capital financing services, plus undercarriage products from partners Sampierana. Product and market specialists will also be on the stand throughout the show for discussions with customers.

'Hillhead provides a unique opportunity for our customers and the media to see our machinery in action and to take a closer look in detail on the stand,' said Olivier Buschino, business director for the UK and Republic of Ireland. 'We look forward to welcoming customers, new and old, to the stand and having the opportunity to show the very latest technical innovation and engineering excellence on show from CASE Construction Equipment.'

Doosan Construction Equipment is now

## Lekatech introduce the Electric Hammer

At Hillhead 2024, Lekatech will take the opportunity to introduce their revolutionary electric hammer technology, which is transforming breaking worldwide. The Lekatech Electric Hammer is powered by new and patented linear electric motor technology, developed to revolutionize the impact hammer market. Designed and built to be highly efficient and with a power-to-weight ratio superior to similar traditionally powered hammers, it is coming to market at the same time as electric-powered carriers, making it a natural partner.

The Lekatech Electric Hammer represents a major advance in hammer design and construction. Light in weight and delivering high power but producing low vibrations, it is built for operator comfort,

economy, and high productivity. Electrically powered with low emissions and operating costs, the Electric Hammer is the ideal choice when working in zero- or low-emission areas, and is set to transform breaking in quarries, mines, demolition, and construction sites globally.

Designed to seamlessly integrate with electric carrier machines (although it can be used by traditionally powered carriers), the Lekatech Electric Hammer delivers up to 70% energy savings when factoring in overall energy consumption of the equipment. In addition to energy efficiency, the hammer is said to significantly outperform comparable traditional technology, providing twice the blow impact energy of a hydraulic hammer of the same size.

The Lekatech Electric Hammer

## Husqvarna introduce new DXR 95 demolition robot

The new DXR 95 compact demolition robot from Husqvarna

Husqvarna Construction will be introducing the new DXR 95, their lightest and most compact demolition robot ever, at Hillhead 2024. The launch adds a fifth model to the company's diverse range of high-quality demolition robots, giving its

customers a huge productivity boost in confined spaces.

As a partner for construction professionals all over the world, Husqvarna Construction can now offer a demolition robot that is both powerful and easily portable. The DXR 95 packs a

strong punch, thanks to a high-efficiency powertrain delivering 9.8kW of power and 250 bar of pressure to the end-of-arm tool. Yet, weighing in at around half a tonne, it is small enough to be transported in an ordinary van and steered through narrow passageways, as well as sturdy enough to manage steep inclines at an angle of 30°.

Operating the DXR 95 is intuitive and straightforward with one of the industry's most user-friendly remote controls. Key features include ergonomic joysticks and knobs that make it easy to select and change settings, written messages that make it easy to understand machine feedback, and the ability for operators to choose their preferred language on the large LCD screen.

'With its superb power-to-weight ratio and small footprint, the DXR 95 answers the demand for a demolition robot that can fit into cramped or fragile environments – and truly deliver the power and performance that professionals need,' said Daniel Lundberg, global product manager at Husqvarna Construction.

The DXR 95 is made for many hours of continuous demolition. Ideally suited to a range of applications, the

versatile robot can deliver consistently high performance with minimal interruption thanks to its superior thermal management technology.

Additional features that further prevent unnecessary downtime include a heavy-duty arm system with robust friction-welded cylinders, automatic greasing of the breaker for longer service intervals, and protection of vital parts in the tough lower chassis. All components can be easily accessed and detached to make service and maintenance quick and trouble-free.

The DXR 95 also gives operators more flexibility. Using the remote control, they can easily tune parameters such as water, grease, and hydraulic functions to suit their preferences – and even adjust the pressure and flow to match the requirements of non-standard tools.

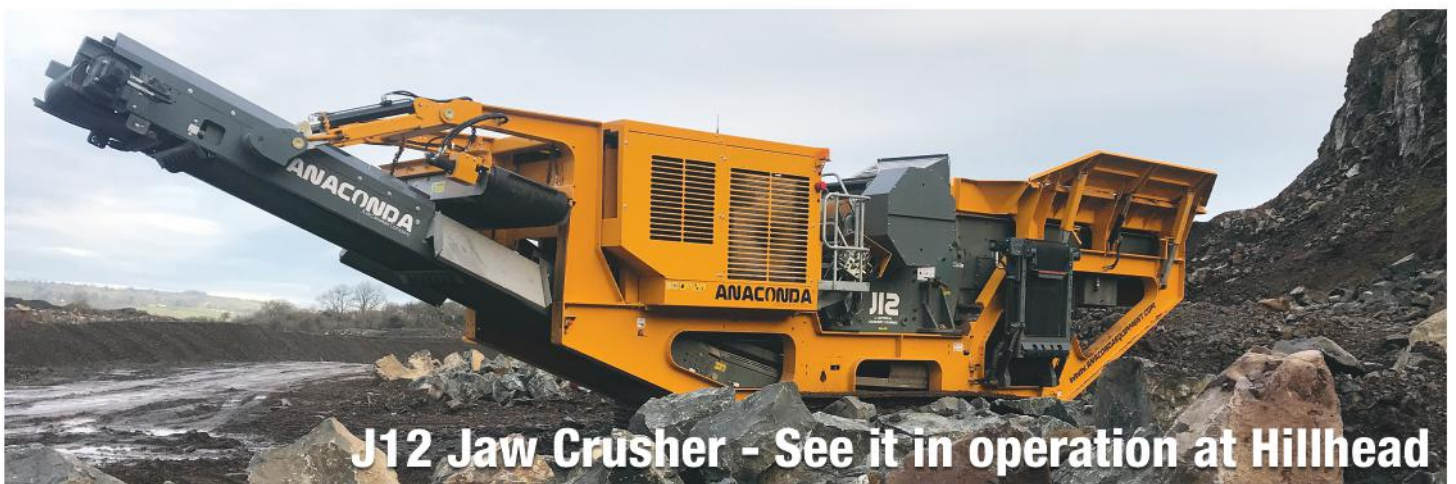

'We are committed to giving our customers a competitive edge, and the DXR 95 raises the bar for user-friendliness and performance in demolition robots,' said Mr Lundberg. 'Now, construction professionals everywhere can get the job done more efficiently – wherever the job may be.'

## Tele Radio exhibit at Hillhead for the first time

Tele Radio, specialists in the design and manufacture of radio remote-control solutions, will be exhibiting at Hillhead for the first time

Established in Lysekil, Sweden, in 1955, Tele Radio are one of the market leaders in the design and manufacture of radio remote-control solutions. Providing end-to-end product solutions and services in the field of wireless equipment control and machine communication, their goal is to provide products that will add value to your business

whilst at the same time providing impeccable support when required.

With a broad range of products from small transmitters to big joystick platforms, Tele Radio offer a bespoke service to adapt products to suit the customer's needs. The company's team of experts are dedicated to developing products that improve the way

you work, with a central focus on building strong customer relations that extend beyond the sale.

Exhibiting at Hillhead for the first time, Tele Radio will be showcasing a range of products from simple push-button controls to complex, customizable, proportional hydraulics and camera feedback systems. Tele Radio's industrial remote controls are designed to improve efficiency and safety in the quarrying and construction industries, providing precise and easy-to-use control for machinery and equipment.

One of the products on display will be the new SupraTEQ TW78 waist transmitter. With a much larger colour screen than the company's other models, plus even smoother images, the SupraTEQ TW78 meets the increasing demand for better interaction when operating large machinery, installations, cranes, winches, etc. The SupraTEQ TW78 has been specially developed for demanding environments,

where screen size is often important for showing detailed feedback information.

Also on display will be the Tele Radio Tiger remote control, capable of providing feedback from the machine. This is displayed on the transmitter's LCD screen or, alternatively, uses LEDs situated next to the transmitter's function buttons. The lights on the transmitter are programmable, for instance to indicate whether a function is activated/not activated. Offering maximum safety for complex industrial applications, Tiger is Tele Radio's strongest system and is independently certified to SIL3, PLe.

With safety as a central focus, Tele Radio put great effort into making their products as safe as possible, ensuring that they meet the highest possible standards. The company's products are not only safe, but are also robust enough to withstand rugged operations. The company also cares about the environment and is certified according to the ISO 14001 standard.

## Finlay to debut new electric variants at Hillhead 2024

Finlay, one of the global leaders in mobile crushing, screening, and conveying equipment, are set to unveil new electric variants of the I-120RS impact crusher and the 883+ scalping screen at Hillhead 2024. These models will be showcased in the working demonstration area, featuring electric-powered technology that enables operation from either a mains electric power supply or a secondary source such as a genset. The live demonstrations will be powered by the new Finlay TG500 genset, which will drive both machines efficiently and sustainably.

'We are excited to unveil our latest electric equipment at Hillhead 2024,' said Matt Dickson, business line director for Finlay. 'The features integrated into these electric machines will empower customers to achieve their sustainability objectives while maintaining the mobility and ease of movement that are hallmarks of our equipment.'

The electric Finlay I-120RS

The Finlay I-120RS electric variant impact crusher

provides the flexibility of a mobile impact crushing and screening plant on one platform. The on-board 3.66m x 1.53m (12ft x 5ft) two-deck screen ensures a quality cubical product, whilst for applications not requiring recirculation of materials for further processing or stockpiling, the complete screening and recirculating system can be quickly detached from the plant.

The electric Finlay 883+ heavy-duty scalper is designed to work in primary and secondary screening applications such as quarrying and mining, iron ore, construction demolition waste, sand and gravel, compost, topsoil, and coal.

Throughout the development process for the electrification of these products, input from the Finlay distribution network and

their customers underscored the importance of retaining the familiarity and adaptability of mobile machinery, allowing for relocation across sites with minimal effort. In response, both machines feature an onboard engine primarily dedicated to mobility, while all operational components – feeders, crushers, screens, conveyors etc – are powered by electricity. An additional measure is the introduction of Finlay gensets, which provide electricity to connected Finlay equipment when a plug-in connection to the grid is unavailable.

'By adopting electric-powered mobile crushing and screening equipment, customers not only achieve environmental benefits but also gain financial and operational advantages as well,' concluded Mr Dickson. 'It also future-proofs their investments as the industry moves towards more sustainable practices – making them a forward-thinking and responsible choice for operators.'

## Hillhead debut for SRL Traffic Systems

SRL Traffic Systems, Europe's largest manufacturer and supplier of mobile intelligent transport system (ITS) solutions to the traffic-management and construction industries, are expanding into the aggregates sector, making their Hillhead debut with the presentation of a portfolio of products designed to improve safety in quarries.

According to the Health and Safety Executive's 2023 Vehicles and Edge Protection guidance, transport accounts for 40% of accidents and 60% of deaths in quarries. While quarry transport safety has long been an HSE priority, the organization believes that it has yet to be effectively addressed by the industry.

SRL's patented and award-winning Haul Route PLUS facilitates the safety of drivers at plant crossing points, while promoting the efficient flow of traffic. The only plant crossing solution integrating adaptive detection technology, it incorporates traffic signals that respond to the actual flow of quarry vehicles rather than operating to timings set to accommodate the slowest plant. An all-red facility ensures that barriers remain open until plant is safely across the junction.

Hillhead marks SRL's official entry into the aggregates sector

This year SRL incorporated the RiseMaster HE fully autonomous solar-powered automatic boom barrier (patent pending) into Haul Route PLUS to allow managers of longer-term projects to benefit from the solution. The robust, freestanding barrier features a continuous flanged post of high strength steel. Haul Route PLUS is also available with INSTABOOM protection barriers for shorter-term deployments and can include variable message signs (VMS) and CCTV. All components are solar/hybrid.

Within quarry perimeters, barriers are used in conjunction with full-colour, high-resolution

VMS, signals, CCTV, and ANPR to promote on-site safety. Bespoke integrated solutions limit access to specific areas, such as tips and excavations, to authorized vehicles and separate visitor traffic from plant and pedestrians. They limit the quantity of vehicles on often narrow, single-lane haul routes, minimizing risk of collision and the need for reversal. They also permit traffic management where HGVs and cars need to cross, where only one-way traffic is feasible and where pedestrians need to traverse haul routes.

As well as promoting the safety of drivers and pedestrians, SRL solutions

are designed to minimize the time that quarry staff and SRL maintenance teams need to spend in near proximity to live traffic lanes. Solar/hybrid equipment requires infrequent battery exchange, while Eurolight signals may be controlled remotely from a position of safety via the Euro Remote Control.

SRL's business development director, Iain McDonald, said: 'SRL have been developing innovative solutions designed to promote the safety and efficiency of the UK and Rol's road network and construction sites for over 25 years. Hillhead marks our official entry into the aggregates sector, where our goal is to enable quarry managers to improve safety and reduce accidents, safeguarding employees and visitors alike.'

SRL offer the industry's largest distribution network of more than 30 depots and are the only ITS manufacturer available to customers on site 24h a day, seven days a week. Products are available both for sale and for hire, and all feature a robust design to guard against accidental damage and have been created to perform reliably even in harsh weather.

## EDGE Innovate debut the Screenpro S18

The EDGE Screenpro S18 heavy-duty tracked scalper from EDGE Innovate

The new EDGE Screenpro S18 heavy-duty tracked scalper will make its UK exhibition debut at Hillhead 2024. As the biggest exhibition of its kind in the world, famous for its live demonstrations showcasing a wide range of quarry, construction, and recycling equipment, Hillhead is the perfect setting to showcase this latest addition to EDGE's growing product offering.

EDGE Innovate are among the global leaders in the design and distribution of a range of equipment used in the quarrying, port handling, and recycling industries, and visitors to their stand can expect a comprehensive display of material handling and recycling solutions, backed by a knowledgeable team offering expert guidance tailored to individual application needs.

The star of the company's exhibit this year, however, will be the highly versatile Screenpro S18. Designed to operate in the most difficult and demanding applications, including the processing of aggregate, construction waste, sand and gravel, soils, and organic materials, the new EDGE Screenpro S18 features interchangeable flip-flow and conventional scalper screens for unprecedented flexibility. The dynamic 5.4m x 1.75m (18ft x 6ft) two-deck screen is available with numerous screen media options and configurations, allowing the EDGE S18 to be utilized as a stand-alone unit or, if needed, placed before or after a primary crusher.

Impressive design features of the EDGE S18 include a low-level feed hopper, two- or three-way split configuration, hydraulic folding discharge

conveyors to facilitate the quick transition from operation to transport, and a fully integrated power unit with large service access. A user-friendly control system with sequential start/stop functionality provides exceptional operational performance and unit safety.

EDGE Innovate's sales manager, Tom Connolly, commented: 'The EDGE team is extremely excited about the opportunity to present our latest product offering at Hillhead 2024. We have full confidence that the exceptionally functional, feature-rich design and build quality of the Screenpro S18 will be highly evident to the experienced visitors that Hillhead attracts. This new addition perfectly aligns with our existing products and will undoubtedly elevate the reputation of the EDGE Innovate brand.'

## HD Hyundai set to make a 'big' impact

The new 80-tonne HX800A L crawler excavator will be one of several new Hyundai machines being launched at this year's show

HD Hyundai Construction Equipment will display their biggest machinery on the biggest stand at this year's Hillhead show. The company will use the event to launch its two largest Stage V crawler excavators and its heaviest wheel loader.

Tipping the scales at 80 and 100 tonnes, respectively, the HX800A L and HX1000A L are heavy-duty excavators designed for quarry and bulk earthmoving duties. The HX800A L is powered by a 403kW (548hp) Stage V diesel engine, driving two 504 litres/min hydraulic pumps, while the HX1000A L uses a 469kW (629hp) diesel engine, powering three

523 litres/min pumps.

These heavyweight excavators will take HD Hyundai into a new sector of the market in the UK and across Europe, providing a highly productive digging and loading solution for mines, quarries, bulk earthmoving contractors, and heavy civil engineering sites. The HX800A L is suitable for use with 4.25–5.24m<sup>3</sup> buckets, whilst the larger 100-tonne machine is designed to work with 5.4–6.8m<sup>3</sup> buckets.

HD Hyundai will also unveil their biggest wheel loader with the launch of the HL985A. This 35-tonne loading shovel is capable of working with 7.0m<sup>3</sup> buckets, making it an ideal

digging and rehandling machine for the mining, quarrying, and heavy civils sectors. Powered by a 321kW (430hp) diesel engine, the HL985A boasts a bucket breakout force of up to 28,400kg and a full turn tipping load of 22,950kg in standard configuration.

Whilst the heavyweight machinery will no doubt be the centre of attention on the HD Hyundai stand, the company will also give UK customers a first chance to see the recently launched HX-A Series of mini- and midi-excavators. Setting a new standard for the compact excavator market, HD Hyundai recently introduced eight new machines with operating weights from 1.7–5.5 tonnes. Powered by low-emission Stage V engines, the machines are offered in both conventional and zero-tail-swing designs, to suit a wide range of customers across various markets.

HD Hyundai recently added a range of HRB silenced hydraulic breakers to their line-up. The six breakers, which can be ordered with varying levels of specification, have been designed to work with carrier machines in the 1.2–26-tonne sectors. The larger models are offered with automatic greasing and anti-blank firing technology, whilst all the breakers feature silenced box-housing designs, keeping noise to a minimum

and making them ideal for use in urban areas.

The company will have a full range of equipment on show, including wheeled and crawler excavators, along with additional models from the A-Series wheel loader line-up. HD Hyundai will also demonstrate three of their popular quarry models – including a large crawler excavator, a large wheel loader, and an articulated dumper truck – in the working demonstration area that surrounds the showground.

Visitors to the HD Hyundai stand will be able to get the best view of the machines at work, as the company has moved to a new location directly in front of the demonstration area. At 1,220m<sup>2</sup>, up from 750m<sup>2</sup> in 2022, the display will include two viewing areas and a range of hospitality, including Hyundai's now famous pie machine!

'HD Hyundai will really be going large at Hillhead this year, with our biggest stand, our biggest machinery, and the biggest line-up of equipment we've ever had on show,' said Lee Appleby, head of marketing at HD Hyundai Construction Equipment Europe. 'We look forward to welcoming customers, visitors, the media, and our friends in the content-creation market to the stand. We will be making the biggest impact at Hillhead 2024.'

## MDS to exhibit heavy-duty tracked trommels

MDS, a leading manufacturer of heavy-duty rock trommels and conveyors with more than 25 years' experience in the aggregate handling, quarrying, mining, construction, and recycling sectors, will feature the M412 and M515 tracked trommels at Hillhead 2024.

The compact yet powerful M412, which will be located on the MDS stand, represents performance and durability, having been engineered to operate in the most challenging of applications in the harshest of environments, from demolition waste to quarry overburden. Its ability to handle material as large as 600mm (24in) makes it a versatile asset, equally at home in a quarry or on a construction/

demolition site.

As well as the M412, MDS will feature the M515 mobile tracked trommel in the designated demo area. Capable of processing the largest of rocks, up to 800mm (32in) in size, the M515 is robust enough to tackle the toughest applications, regardless of weather conditions. The M515 also offers enhanced stockpile capacities and ease of transportation, thanks to its fold-out stockpiling conveyors and four hydraulic jacking legs.

Conor Hegarty, general manager of MDS, said: 'We are excited to exhibit at Hillhead again to showcase the finest products in our range. At MDS, we are well-known for setting

The compact yet powerful M412 tracked trommel from MDS

new benchmarks in trommel technology. What sets us apart is not just our innovation, but the toughness and durability embedded in every machine

we create. We invite attendees to visit MDS stand to see first-hand how our solutions can tackle the toughest of quarried aggregates.'

**"It's been a real game-changer for us.  
We're now producing aggregates and  
sands that are 10% derived from  
recycled concrete from  
demolition waste."**

# TRANSFORMING WASTE

## Complete Solutions For Constructing A Sustainable Future

McLanahan offers industry-leading solutions for processing virgin aggregate as well as recycling construction and demolition waste. Offering complete systems from crushing and screening through tailings and water management, McLanahan helps producers meet industry demand by producing clean, in-spec products from both virgin aggregate and recycled aggregate. Our solutions offer producers the ability to recover process water for reuse, reduce freshwater requirements and further contribute to overall site sustainability.

**Increase production, efficiencies and profit while working towards a more sustainable future  
with McLanahan.**

## TWS unveil new software system at Hillhead

A Swedish operation showcasing Terex Washing Systems' 'Feeder to Filterpress' process solution capability

Terex Washing Systems (TWS) will use Hillhead 2024 to debut their innovative STREAM software system, which harnesses real-time data to provide operators with actionable insights that can enhance productivity, reduce downtime, and maximize profitability. Additionally, TWS will showcase the following

equipment from their extensive range of 'Feeder to Filterpress' solutions: the AggreScrub Pre-screen 150, the AggreScalp, and the FM 120 Bucket Wheel.

Essential for any wet processing plant, the AggreScrub Pre-screen 150 provides efficient material separation with its advanced screening technology. It is

particularly suited to the construction and demolition recycling market, with key benefits for customers including durable wear characteristics, cost efficiency, and the ability to effectively scrub aggregates and float out clays/silts/lights (wood/plastics) on one chassis.

Second in the line-up is the AggreScalp, a versatile, heavy-duty and high-performance screening solution that has the flexibility to operate as a two- or three-way-split screener. The highly aggressive screen can accept media including bofor bars, finger screens, woven mesh, and 3D punch plates, allowing it to be used across a wide variety of applications.

Finally, the Terex Washing Systems' longstanding and reliable FM 120 Bucket Wheel offers high-capacity sand washing, ideal for demanding applications. The highly efficient dewatering unit removes silts, slimes and clays from sand to produce up to two saleable products, including: concrete,

mortar, and asphalt sands; silica sands; golf course sands; filter bed sands etc.

For over 65 years, Terex Washing Systems have been leading providers of washing solutions for aggregates and recycling operations worldwide. The team collaborates with customers to deliver complete, end-to-end sustainable solutions, transforming waste into valuable resources, and contributing to a cleaner, more efficient world.

TWS are currently celebrating five years of in-house engineering and manufacturing of their own filter presses, which provide an efficient, well-contained process to provide clean water for indefinite reuse within the wash plant. This process ensures that the recycled water entering back into the washing process is clean, which helps meet stringent quality standards and enhances the marketability of the washed sand and aggregates.

## SMT leading the transition to construction sites of the future

At Hillhead 2024, SMT will champion sustainability with the UK public debut of the 23-tonne Volvo EC230 Electric excavator, alongside solutions to optimize and decarbonize sites with existing machines, as well as machine rebuilds, used parts, and used equipment to promote a circular economy.

SMT, the authorized dealer for Volvo Construction Equipment (Volvo CE) in Great Britain, return to Hillhead 2024 with a renewed focus on net zero and guiding customers' transition towards construction sites of the future, today. On both the stand and in the renowned Hillhead demonstration zone, SMT will shine a light on the latest Volvo machinery and SMT solutions to help transform customers' operations for lower emissions, greater efficiency, and less waste.

SMT will use the show to officially introduce the new Volvo EC230 Electric excavator to the market in Great Britain. This 23-tonne machine is Volvo CE's first

fully electric model in the mid-sized excavator category, opening up the benefits of zero exhaust emissions and quiet operation to a broader range of construction applications. Visitors will be able to see the Volvo EC230 Electric in action and experience its advantages first-hand in the exhibition's demonstration zone. Working alongside the Volvo L120H Electric Conversion wheel loader and a fully electric truck from Volvo Trucks, this trio will showcase Volvo Group's commitment to cleaner and more sustainable ways of working.

'At SMT, we are committed to helping our customers work towards and achieve net zero – and we believe that journey starts today, by optimizing your current site and fleet,' said John Lawrence, product manager for Site Solutions at SMT. 'With our range of customizable solutions for your site and operators, SMT can assist in continuous improvement across your operations. By targeting

The Volvo EC230 Electric excavator while charging

key areas that affect cost and emission output, we can help you reduce your carbon footprint and help you achieve your sustainability targets.'

Among these solutions, SMT will showcase Site Simulation, which uses advanced drone technology to create a digital twin of a customer's site. This replica can then be analysed to suggest a bespoke step-by-step plan for improvement. In addition, by combining Site Simulation with other solutions, such as operator training, SMT can help optimize a customer's

site at every level, maximizing both efficiency and productivity.

Nick Allen, SMT's chief executive officer in Great Britain, concluded: 'The road to net zero is a journey, not a destination, and SMT are here to walk that path with you. With our comprehensive suite of solutions – from electric machinery, through site efficiency services and machine control systems, to machine rebuilds and used parts and equipment – we're ready to empower you to achieve your sustainability goals.'

## EPC-UK to showcase new ROG+ service

EPC-UK and EPC Metrics will be showcasing ROG+ (Rock on Ground Plus) at Hillhead 2024

At Hillhead 2024, drilling and blasting specialists EPC-UK and EPC Metrics will be showcasing, amongst other new innovations, ROG+ (Rock on Ground Plus), their next level of advanced customer service.

Commercial manager Ryan Ward explained: 'This advanced, customer-focused development is expanding EPC-UK and EPC Metrics' capabilities beyond drilling and blasting alone. It's enabling us to deliver a highly sophisticated

and accurate blasting service where customers choose only the specific elements they need to either support equipment and tools they already have on site or add new telematic measurements, helping to improve their entire value chain from face-to-gate or mine-to-mill. Not only does this streamline operations from a cost-management perspective, but it also enables greener credentials, as by putting holes in the ground as accurately as we can, we deliver maximum performance of our explosive products.

'ROG+ involves measuring, through a multitude of advanced tools, blast impact on a continual feedback loop basis using the data we have access to on site together with engineer expertise to make more effective future blasting decisions. By creating a continuous feedback loop we're able to see how our blasting activities are impacting the overall downstream of a customer's quarrying operation, as well as the performance and value gained from the materials that are being extracted. We

feed that information back into the next blast decision-making process and, by making slight adjustments each time, can progressively enable customers' operations to become even more optimized.

'Using ROG+'s data suite and our engineering team's expert knowledge, we're making better, tailored decisions about the way customers' blast in the ever changing quarrying environment,' Mr Ward continued. 'By choosing only the tech elements from the service that apply to each individual site, customers can significantly improve activity and expenditure within their specific quarry, whether that's linked to loading, hauling, fuel usage, or crushing to get all the value possible. Equally, it's helping us to improve choices regarding emulsion types and blends, detonators, timings, top and bottom priming, and blasting parameters. We can even use ROG+ to introduce 'green multiblend' into customers' operations by using recycled mineral oil in their bulk emulsion, or 'green and blue' ammonium nitrate which is

better for the environment.'

In addition to showcasing the tailored ROG+ service, EPC-UK's presentation team will detail two more exciting technologies from a growing portfolio – POLAREX and Vibraquipo. The robust, tried and tested POLAREX probe – an effective borehole deviation monitoring tool for measuring and maintaining the orientation and angular velocity of blastholes to resolve down-the-hole measurement issues, control energy, and manage fly-rock issues, and QA/QC hole constraints – will be demonstrated on the stand.

Meanwhile, stand staff will be on hand to explain EPC Groupe's progressive collaboration with vibration measurement instrument providers Vibraquipo, together with their equipment's capacity to further customers' digitalization and data-management strategies in the field. Vibraquipo's equipment and EPC Metrics' associated service options will mean instruments can be managed, supplied, and calibrated in the UK.

## Larger and more prominent stand location for SANY

SANY UK are looking forward to their return to Hillhead where they will showcase a wide range of machines, both on their static stand display and in the working demonstration areas. With a new, larger, and more prominent stand location in front of the quarry face demo area, visitors will be able to see a range of products that includes excavators, telehandlers, and tandem rollers, as well as enjoy watching all the action in a real-life quarry environment from indoor and outdoor viewing areas.

SANY's static excavator line-up will include mini, compact, and larger machines, ranging from the new, lighter-weight, 1.8-tonne SY18C to the larger 40-tonne SY390H, many of which will feature a new-generation operator's cab to aid more comfortable, intuitive, and productive working.

Joining the excavators will be the brand new STH1840 telehandler which debuted at

The 50-tonne SANY SY500H crawler excavator will be put through its paces in the quarry face demonstration area at Hillhead 2024

the ScotPlant exhibition earlier this year and was the star of the show for SANY. The STH1840 is one of the first machines to feature in the SANY telehandler series along with the smaller 14m (STH1440) and 7m (STH742) models, all powered by Stage V Deutz engines and designed to offer the ultimate in safety, comfort,

and performance.

For those visitors looking to see SANY machines in action, the SANY 50-tonne SY500H and 40-tonne SY390H crawler excavators will be working in the quarry face demonstration area throughout the three-day show. Powered by Stage V Cummins 298kW and 252kW engines and Kawasaki pumps,

respectively, these heavy-duty tracked excavators provide plenty of power and maximize fuel economy. Visitors will also be able to see the 30-tonne SANY SY305C working in Crusher Alley during the event.

Charley Bright, marketing manager for SANY UK, commented: 'The Hillhead show provides us with an exciting and dynamic setting to showcase our equipment, both in a live environment and in more detail on our stand. We've made huge inroads to the UK market since our first exhibition here in 2022 and this year we are looking forward to introducing our visitors to a wider range of SANY products, all of them perfect for the quarrying and construction industry.'

Joining the SANY team on the stand will be representatives from across the company's nationwide dealer network, on hand to offer advice on products, aftermarket, and finance support solutions.

## Your Wellbeing – take care on site

### Keep hydrated

Free chilled and filtered water refills are available from our Hydration Stations located in the Registration Pavilion (as you enter on the left-hand side), and the Organisers' Office (B40) at the bottom of the ramp. Reusable water bottles are available to buy, or refill your own.

### Take a break

Make use of the outdoor seating areas shown on the map, or indoors in the new Hillhead Café located in the Showground Pavilion.

A quiet room is also available. Please request access from the Organisers' Office (B40).

## Stay connected with free Wi-Fi

Download your e-mails and browse the internet with free Wi-Fi available across the exhibition site for visitors at Hillhead 2024. Dedicated hotspots can be found at the following locations:

- 1 Just outside the visitor registration area at the entrance to the Registration Pavilion
- 2 By the catering area viewing platform next to stand A37
- 3 Between stands CE16 and D1
- 4 The 'Quarry Face' demonstration viewing area next to stand Z6
- 5 The Organisers' Office, stand B40
- 6 The Hillhead Café in the Showground Pavilion
- 7 The 'Crusher Alley' demonstration viewing area between stands L4 and L5

# IQ

The Institute  
of Quarrying

## Showcasing the best of our industry

**T**his month, we eagerly anticipate the return of the Hillhead tradeshow exhibition at Buxton, a highlight of the year for many of us. With over 20,000 attendees over three days, it's a pivotal event in our sector, attracting global visitors to explore the latest advancements in equipment and technology.

Hillhead is a fantastic opportunity to celebrate and showcase our industry. Reflecting on my first visit to the third show in 1985 as a young assistant quarry manager, I still feel the same excitement and eagerness to learn. It's a chance to pause, reflect, and take pride in our sector.

During the show we will launch the Strategic Safety Forum (SSF) for Health and Safety in the Mineral Products Sector. The SSF highlights the industry's collaborative spirit in tackling health and safety issues. The Mineral Products Association (MPA), British Aggregates Association (BAA), Quarries National Joint Advisory Committee (QNJAC), and

Institute of Quarrying (IQ) are committed to fostering consensus and co-operation to improve outcomes across the sector.

IQ will be present as always, engaging with both current and prospective members, and showcasing our recent efforts to enhance professional development support. This year, we are especially excited to share a stand with the Mineral Products Qualifications Council (MPQC) and feature industry bodies such as QNJAC, the University of Derby Centre for Mineral Products, the Institute for Asphalt Technology (IAT), the Institute of Explosives Engineering (IexpE), the Heavy Clay Technology Association (HCTa), and Minerals Matter. This collaboration underscores the importance of working together across the industry.

Our joint efforts focus on building competence, skills, and capability in both core areas and emerging fields such as sustainability and technology. Collaborative approaches are essential to addressing the challenges we face.

Additionally, the Minerals Matter initiative will be present, promoting careers in our industry to the next generation. They will give a group of secondary school students a tour around the show on the Thursday to explore career opportunities with leading companies.

Demonstrating competence is both a regulatory and moral responsibility for our profession. As detailed in last month's *QM* article, our stand will offer insights into how we support competence and skills development for our members and the sector.

We look forward to welcoming our members and industry professionals, to catch up with our team and to seek guidance on managing CPD and its documentation.

*Viv Russell*  
President

# Informing the Future

## Learning from the Labour Market Intelligence Study

**R**esults of the 2023 Labour Market Intelligence Study (LMIS), undertaken on behalf of Minerals Matter, regarding the current challenges facing the workforces of the quarrying, mineral products, and mining sector will be available as an executive summary at Hillhead 2024, on stand H2.

More than 300 companies were contacted to complete the online survey between 10 July and 1 September 2023. A total of 91 responses were received, representing a response rate of 30%.

Beyond the answers revealed by the research, the LMIS provides significant data to inform longer-term strategic thinking and poses new questions for employers and key sector bodies.

### LMIS and the Strategic Forum

The Strategic Safety Forum (SSF) unites industry bodies across the mineral products sector to promote collaboration and co-ordination for the industry's benefit,

focusing on shared goals. Representing organizations of all sizes, the Forum covers the aggregates, asphalt, cement, concrete, precast and masonry, dimension stone, lime, mortar, and industrial sand industries throughout the UK.

Martin Riley Hon FIQ, the current chair of the SSF, emphasises: 'Consolidated data from the LMIS will guide actions and future planning across standards, skills, and education. This data, collected by the industry for the industry, is crucial for ensuring that standards remain relevant and effective. It is vital for attracting and retaining a diverse workforce and supports the critical work of Minerals Matter in raising the industry's profile among the next generation.'

A key focus of the SSF is the elimination of harm from the Fatal 6, which are recognized as the leading causes of fatalities and serious injuries in the sector. SSF members acknowledge that baseline data on education and skills

within the sector is essential for enhancing competence and providing the necessary knowledge and qualifications that will advance the industry. Ensuring that learning and development pathways covering vocational training and professional education programmes are navigable and accessible to everyone working in the sector will provide an additional advantage in attracting the best talent to this industry.

### Why is the industry experiencing recruitment challenges?

The legacy of the pandemic and ongoing geopolitical events has created turbulence, still sending waves of uncertainty across the economy. This certainly has not helped with planning, demand, and the supply of mineral products. It is a less-than-welcome backdrop in which to confidently invest in both plant and people.

Unsurprising, therefore, that the LMIS found that the sector is still experiencing recruitment challenges across a wide

range of roles, and ongoing skills needs, particularly in areas relating to new technologies and engineering (mechanical and electrical).

Nevertheless, it also revealed that employers have an increased appetite to recruit younger workers though some barriers remain when trying to recruit workers from younger demographics, including apprentices.

The true nature of any barriers that exist for younger workers, whether they be misconceptions, eg negative sector perceptions, conflation of historic perceptions of mining, or a lack of awareness of the career opportunities and knowledge of the critical link between mineral products, a thriving society, and a sustainable future, will need to be understood.

### Minerals Matter – collective responsibility

Minerals Matter is uniting the mineral products sector to work together to tackle the issues identified by the industry around recruiting and retaining people from a diverse population. In doing so the sector will be better placed to drive innovation, increase social mobility, and ensure the sector continues to play its vital role within the economy.

Minerals Matter understands that collaborating with a wide range of organizations that align with our aims and objectives, is the key to making a real difference. By working with some key strategic partners who are helping to raise the profile of the sector, ensures employers' voices are heard and opens doors to some fantastic opportunities that can benefit employers and the sector.

The industry needs to think about affecting all phases of education, raising aspirations from primary through secondary by engaging with and capturing the young minds. It needs to ensure young people

have regular opportunities to experience and be inspired by working environments.

'The need for industry to work consistently with both primary and secondary education to build a greater awareness of the opportunities available can help deliver long-term recruitment to the sector. One way to do this is for more people to become Minerals Matter STEM Ambassadors, each of whom can play a vital role in promoting the career pathways that can resonate with young people,' commented James Thorne, chief executive officer of the Institute of Quarrying and the Mineral Products Qualifications Council.

### Diversity, demographics, and the industry workforce

Having a diverse workforce is more than just making a moral or ethical standpoint; it provides a strategic advantage. It enhances

creativity, decision-making, market reach, employee engagement, and economic performance. Organizations that embrace diversity are better positioned to thrive in an increasingly global and competitive market.

The LMIS revealed almost two thirds (65%) engage in the quarrying of stone, sand, and clay; 29% in the manufacture of concrete; and a further 23% in the manufacture of articles of concrete, cement and plaster (including precast and pre-stressed concrete products).

As in 2019, most of the workforce (91%) is employed full time and the majority (55%) of employees are over 45 years of age. Whilst the sector is still predominantly (80%) made up of male workers, this has declined from 2019 (89%), with the proportion of females almost doubling from 11% to 20% over the same period.

Attracting and retaining new and diverse talent remains a challenge, but the industry recognizes the critical importance of fostering inclusivity in all aspects of its operations. This commitment is evident in its efforts to provide equitable opportunities through training and development programmes, implementing well-being policies, and enhancing staff facilities. Continuous progress in these areas is essential, and there must be no room for complacency to ensure these advancements are sustained.

### Softer skills training needed

The biggest change since 2019 identified by the LMIS is in the need for training in leadership and management skills, which has seen the immediate need increase from 3% to 18%, with a further 59% seeing a need for training in the future.

Developing leaders has been a pivotal strategy for the Institute of Quarrying. Providing opportunities to access lifelong learning and promoting the benefits of continuing professional development (CPD) is at the core of being a member, along ➤

with developing professional networks to help individuals learn and grow as their experiences grow.

There is also a cultural shift for individuals from being the overseers of production to more sophisticated thinking via knowledge of the whole quarry operation, not just expertise in a single area. MPQC's comprehensive range of driver and industry training also looks holistically at best practice and a greater understanding of the impact of the site team on performance, efficiencies, and results.

## Fit-for-purpose apprenticeships

Apprenticeships can offer employers a range of key advantages including addressing skill shortages, enhancing employee retention, and fostering innovation. Additionally, they contribute to building a future workforce, and help with promoting diversity and inclusion. By investing in apprenticeships, employers can build a steady supply of skilled, loyal, and motivated employees, supporting the

long-term success and sustainability of their businesses.

Apprentices bring energy, innovation, and digital know-how. They drive businesses to be responsible and ethical and are ready to challenge the status quo in the pursuit of excellence. The mineral products technician higher apprenticeship delivered through the Centre for Mineral Products at the University of Derby is an excellent example of a qualification tailored for different pathways within the sector. The qualification prepares individuals by wrapping the required technical knowledge around softer skills such as problem solving, communication, and team working. Investing in apprentices is investing in the future leaders of the industry.

LMIS revealed that nearly two thirds (63%) of employers have recruited young people (aged 16–19) in the last three years, an increase from 55% in 2019. The majority (62%) of these have been apprentices with most reporting taking on at least two apprentices.

## Vacancies increase amidst societal factors

Almost two-thirds (62%) of respondents report having vacancies to fill; this is a substantial increase on the 38% reported in the 2019 LMIS. There are noticeable differences by size of company with 88% of large companies and 77% of medium-sized companies having current vacancies, compared with 48% and 27% in small and micro businesses, respectively.

Filling job vacancies in the UK is challenging due to a complex interplay of factors including skills shortages, demographic changes, economic conditions, Brexit impacts, and evolving work preferences. Addressing these challenges requires co-ordinated efforts between employers, trade bodies, skills-setting organizations, training providers, and educational institutions to ensure that the workforce is equipped with the necessary skills to support the needs of the mineral products industry.

## New tech, new skills, new opportunities

Looking to the future, over the next five years the need for new skills is predominantly in areas associated with new technologies. Almost two thirds (62%) see automation as an area where there will be a need, with 54% pointing to increased use of autonomous, hydrogen or electric vehicles.

Other areas mentioned include digital robotics (45%), drones (42%), and operational intelligence (41%). Respondents also highlight an increased demand (from 33% in 2019 to 48% in 2023) in environmental and compliance operations, and in engineering, which has increased from 27% to 39%.

The mineral products industry is committed to achieving its Net-Zero commitments. This has led the way in utilizing new technologies and driving innovation through the production of its products as well as harnessing more and better data to improve both operational and environmental performance. A third of the aggregate market is made up of recycled materials and the circularity of products continues to be a focus for product research and development.

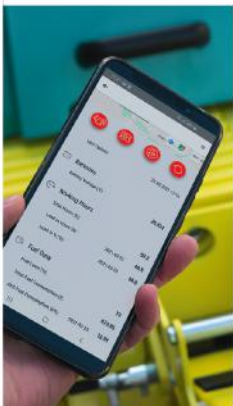

## LMIS Executive Summary available at Hillhead

'The report is an excellent read with a lot of data and interesting trends following on from previous LMI surveys. The impacts of the post-Covid economic situation and technological transformation of the sector are evident. It is an invaluable resource that can signpost us towards the creation of a talented pipeline of workers, exceptionally capable of leading the sector into the future,' said Viv Russell FIQ, IQ President and MPQC Chair.

The LMIS survey is available as an executive summary from the IQ/MPQC stand at Hillhead (stand H2) or can be downloaded from: [www.minerals-matter.co.uk/LMIS](http://www.minerals-matter.co.uk/LMIS)

# QNJAC on the Stand

## Promoting health and safety guidance at Hillhead 2024

In the run up to Hillhead 2024, Ben Williams, chairman of the QNJAC (Quarries National Joint Advisory Committee) board, together with chairpersons from the organization's dedicated working groups, talked about their involvement with the multifaceted body and their priorities for the coming months

Joining Hillhead 2024 as part of the Institute of Quarrying (IoQ) stand, QNJAC volunteers from across the quarrying and extractive industry will be on hand to discuss the promotion of the organization's health and safety guidance, which is relevant to all sectors of the quarrying and associated industry. Focus too will be placed on detailing QNJAC's commitment to making the operating environment a safer place by raising training standards and competence levels.

### Mutual mission

QNJAC collectively represents employers, employees, the government regulator (Health and Safety Executive, HSE), professional membership bodies, trade unions, trade associations, and industry training and educational organizations.

Through the sub-committees and working groups that have been created to focus on specific projects, QNJAC reviews regulations, innovations, accident and incident reports, best practice, and new technologies, and uses the information gathered to produce updated industry guidance.

Once approved by the QNJAC Board Governance procedure, these guidance documents are published on [qnjac.co.uk](http://qnjac.co.uk). This information, along with self-audits, can help employers understand the regulations that relate to them, support the creation of action plans to resolve any gaps, and help in applying updated guidance to individual operating environments.

There are seven QNJAC working groups – Geotechnical, Contractors, Leadership & Workforce Engagement, Communications, Health & Wellbeing, Mobile Plant, and Drilling & Blasting – with each priding itself on the passionate approach taken to helping people working in the quarrying and extractive industry to consistently stay safe.

Explaining more about QNJAC's efficacy, chairman Ben Williams said: 'QNJAC, which was developed to support the original Target Zero initiative, is so impactful because of its tripartite and voluntary nature. With the HSE, unions, and employers all present during discussions

and committed, with the passion to ensure the industry can create good guidance on the most recent quarry regulations, there's a mutually understood, baseline knowledge among the collective regarding what's needed and expected to keep operations safe.

'IQ is the independent chair of QNJAC and maintains the group's momentum. On the Hillhead stand our volunteers want to demonstrate their passion for helping people to consistently work in safe environments, raise awareness of the current safety issues affecting our industry, and support its needs as it continues to evolve.'

### On the agenda

Here is more from the chair of each working group, as they give an overview of their involvement with QNJAC and the benefits the organization delivers, whilst sharing details of the individual priorities their group has for the coming months:

Ben Williams, chairman of QNJAC

### Geotechnical Group:

Chair, Rob Palmer – Head of technical services, Tarmac a CRH company

'The Geotechnical Group is passionate about our industry and geotechnics and I'm proud to be a part of the team. Together we harness the diverse professional experience that's needed to formulate robust technical guidance, and we have opportunities for new members to join and further our ability to make a difference.

'Whilst Quarries Regulations are robust, there is a consistent need to maintain their focus and ensure that associated guidance and opportunities for discussion remain fresh and engaging. In our next site-based meeting we'll discuss priorities, safety themes, and successes of the last year, including establishing our first face-to-face technical discussion forum, which we intend to repeat. We're reviewing and rebranding older guidance and are in the advanced stages of producing new work associated with emergency procedures and geotechnical assessments.'

### Contractors Group:

Joint chair, Cath Pickett – National health and safety manager, Chepstow Plant International Ltd

'I have been involved in QNJAC for 15 years, working on various committees within prior roles. Over that time, I've valued the opportunities to develop working relationships outside my day-to-day network and influence positive change. QNJAC has the unique ability to bring together decision-makers from across the industry, the HSE, and unions, into one forum that develops practical tools and guidance, for industry – by industry.'

'Looking ahead, our group is working to prioritize the development of a self-audit document that can be used by contractors and clients alike to encourage improvements in site safety performance.'

### Contractors Group:

Joint chair, Robert Cross – National operations manager, EPC-UK

'I have drawn on QNJAC's expertise throughout my career and in various roles. Being involved in this important subcommittee has helped me to understand the wider perspective of other sectors in which I don't have direct involvement. The contractors' self-audit document mentioned by Cath will work to provide a single point of focus for both the contractor and clients to use within their operations, helping to ensure continuous improvement in the health and safety of all parties involved.'

### Leadership and Workforce Engagement Group:

Chair, Malcolm Mellow – Convenor/safety advisor, union safety representative for Unite the Union, working at Imerys Minerals Ltd UK

'I have been involved in QNJAC since 1998, when I was invited to join as a workforce representative. Performing as a member of the Leadership and Workforce Engagement working group ever since, mostly as Chair, I have contributed to the success of winning awards for producing and updating group guidance. The focus of the group has, over time, moved towards greater ownership in relation to safety improvement through good guidance, and I'm pleased to say that in coming months we'll be working to enable publication of all our most recent updates.'

### Communications Group:

Chair, Mike Phillips – chief executive officer of The British Aggregates Association and director of MinExp Ltd and MinTrain Ltd

'The diverse range of subjects covered by QNJAC, together with the organization's ability to act quickly regarding new topic areas, has enabled safety improvement success to be made within our vital sector. I have been involved with the group since 2007. During my time as a board member, I have created the initial Communications Subgroup, chaired the Mental Health, Wellbeing and Stress Group, and have also had representation on the other working parties. Before becoming Chair of the Communications Group, I was Chair of Health & Wellbeing, a role that will now be taken by consultant Katherine Evans from Bold as Brass Gender Equity Services.'

'Speaking personally, I feel that the role performed by QNJAC and the opportunities I have had to work with the organization have supported my professional development and provided me with learning opportunities as well as an invaluable business network. As accident and incident figures steadily rise, I believe it's a critical time to focus on key areas where differences can be made, and I'd invite those with the passion to become a part of QNJAC to speak to us at Hillhead.'

'For now, the immediate priority for the Communications group is to further promote QNJAC on the stand, ready to build awareness of the QNJAC WhatsApp channel and website.'

### Drilling & Blasting Group:

Chair, Bob Woolley – Head of health, safety, environment and quality for Northern Europe, EPC-UK

'Our members know what good practice looks like and how to implement it. This means that the relevant, useable guidance and support QNJAC produces for operators really does help to improve levels of competence and enhance awareness. Currently, our group is progressing work on a self-assessment audit form that is designed to be split into different sections, including management systems, drilling, surveying and profiling, blasting specifications, and storage and transportation. This will help ease the process of assuring compliance moving forward. In addition, we're reviewing the Blasting National Occupational Standards and plan to re-evaluate our suite of drilling and blasting toolbox talks.'

'At Hillhead 2024, I'd encourage anyone with the passion to improve safety in our vital industry to visit the IoQ stand. By working collaboratively, our QNJAC platform will further maintain the high safety standards needed by all.'

### Health & Wellbeing Group:

Chair, Katherine Evans – Consultant, Bold as Brass Gender Equity Services

'The world has changed rapidly since 2020 and we've seen a huge societal shift in realizing that not all is equal. By being made up of industry people of different businesses there is now even greater ownership of QNJAC's mission. If we want to maintain succession plans in businesses, we need to focus on people-first policies, taking intersectionality into account and addressing the bias that has stopped everyone being safe up until this point.'

'I have worked in the extractive industries for 15 years but in that time have seen very little change in terms of equity for people of marginalized communities. Through my voluntary role with QNJAC I am bringing end-user experience, thought leadership, and a voice for the under-represented to the table. Picking up the Wellbeing baton from Mike Phillips, I'll be starting work on a women's health and safety self-audit for businesses in forthcoming weeks.'

During the three-day Hillhead event, QNJAC volunteers will be sharing QR code-triggered sign-up cards for the new QNJAC WhatsApp guidance notification group, giving visitors the opportunity to follow and share QNJAC's developments. Visit: [www.QNJAC.co.uk](http://www.QNJAC.co.uk) or connect via the LinkedIn group.

QM

# Blasting Barriers to Entry in Quarrying and Construction

At Hillhead 2024 Tarmac are celebrating the changing face of quarrying and construction – from improving equality, diversity and inclusion, through to the latest technology-led solutions. The company's award-winning National Skills and Safety Park is playing an active role in the industry's evolution by improving skills and boosting social mobility

**E**mbazoned in large letters on the side of one of the buildings at Tarmac's National Skills and Safety Park at Nether Langwith Quarry, near Mansfield, are the words '#ourpark'. They serve as a visual reminder that this unique and state-of-the-art training facility, which provides apprenticeships and training courses, is for everyone at every level across the business.

Equality and equity in training and development are vitally important elements for creating a more diverse construction industry and address the industry challenges of upward socio-economic movement and skills shortages.

The UK's lack of social mobility is

well documented and in real terms limits access to good career opportunities for people from all backgrounds. According to the Social Mobility Commission's '2023 State of the Nation' report, overall trends of upward mobility have shrunk in recent decades and chances of long-range upward mobility have also declined. Across the UK significant advantage and disadvantage continue to coexist – the creation of equal employment opportunities and education are key to boosting social mobility.

Socio-economic challenges are not the only hurdle the industry is facing. The skills gap is by now widely acknowledged, and recent data from Randstad has estimated that the industry will need to hire 500,000

new recruits to keep up with the demands of the major infrastructure and construction pipeline. Major projects such as HS2 and Tideway are a significant draw for talent in their geographic regions, putting increasing pressure on an industry that, according to the CITB, is seeing more of its workforce leave than new recruits join.

The CITB 'Workforce Skills and Mobility in the Construction Sector 2022' report revealed that 25% of the current UK construction workforce is made up of people aged 45 to 59, 50% are aged 25 to 44, and just 19% are under 25. This ageing population and lack of younger construction workers is a big contributor to the skills shortage.

## Upskilling, tackling the challenge

Opened in 2020 by His Royal Highness, Prince William of Wales, the National Skills and Safety Park is testament to Tarmac's commitment to removing barriers to success and creating opportunities for recruitment, training, and progression for their employees. In 2023, the park received the Purpose Coalition 'Breaking Down Barriers' award, recognizing the training school's progressive solutions to the challenges of social mobility.

Matt Gibbs, senior manager of operational competence at Tarmac, explained: 'Not only is the park helping to address some industry-critical challenges, but it is doing so in a way that really keeps our employees at the heart of it. The apprenticeships that we offer are a great opportunity to give new starters and individuals coming to us from other industries the foundation to a career in materials and construction.'

'The park was founded on the principle of investing in our people to leave a legacy of safety through equal recruitment and learning opportunities. Its success in the years since it opened show how valuable the park is, and how much our employees benefit from the knowledge and experience they gain.'

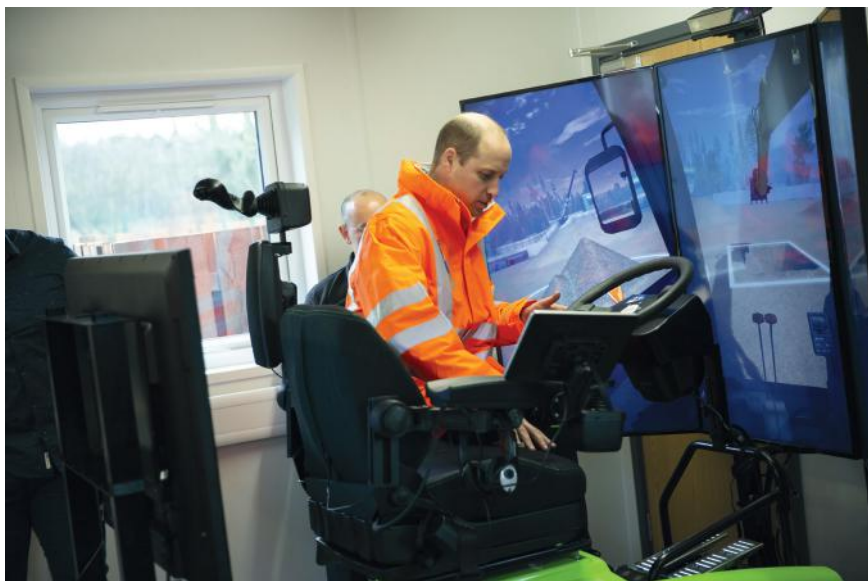

With its people-first focus, the National Skills and Safety Park is providing people with the right attitudes and behaviours, equipping them with the knowledge and skills to succeed. Over a third of delegates that have successfully completed an industry apprenticeship have subsequently been promoted to front-line leadership or supervisor roles, evidence that the business

### Case study 1

**Kelsey South, weighbridge operator  
Mineral Processing Mobile and Static Plant Operator Apprenticeship**

One thing I've learnt a lot about is fuel efficiency; I have driven mobile plant for years but before the apprenticeship I never realized just how much it helps the lifespan of the machine, the environment, and the costs, just by monitoring and switching off the plant when possible.

'I've met a lot of other people which has given me a lot more confidence. The people within my cohort were from various backgrounds, both in terms of work (from various parts of the business and sites) and different backgrounds in life – across ages, different parts of the country, and different personalities. It was amazing to spend nine months with people who I'd likely have never met if I hadn't joined this course and have had the pleasure of working together and creating long-lasting friendships.'

HRH Prince William of Wales at the opening of the National Skills and Safety Park in 2020

is doing things differently to facilitate career progression for its operatives.

As the only industry-specific facility of its type, the park is training and developing thousands of employees annually, to the benefit of the wider sector. Last year the park saw almost 6,000 visitors receiving training.

With upskilling opportunities for the younger generation of new entrants and equal focus on encouraging workers with transferrable knowledge to reskill into quarrying and construction, the park is addressing the industry-critical skills gap in what is an essential sector for the UK economy.

### A new set of skills and behaviours

Comprised of training areas to replicate real-life conditions in a controlled environment, the site offers three different apprenticeship standards as part of its ➤

### Case study 2

**Thomas Macklin  
Mineral and Construction Product Sampling and Testing Operations Apprenticeship**

'Being on the PODP programme has helped me learn new skills and develop a lot of other knowledge. I came on to the course after nearly two years with the company as a lab technician. This meant there have been areas of the course I had some experience and knowledge of already, but it has certainly helped give me more of a foundation and understanding of all things in the technical department and the company as a whole.'

Training areas at the park replicate real-life conditions in a controlled environment

SMT eco-operator training

Professional Operator Development Programme (PODP), all of which are employer delivered and have been tailored to go above and beyond the national occupational standards.

The three learning avenues include Level 2 apprenticeships across materials processing, road surfacing, and mineral and construction sampling. Covering more than 90% of Tarmac's operating requirement for employees, the three apprenticeships provide resilience for the company's workforce. Not only do they maintain skills and succession within the business, but also boost skills availability across a vital industry.

## Case study 3

### Ben Wisniewski Mineral and Construction Product Sampling and Testing Operations Apprenticeship

'I've now been working at Tarmac for just over a year. I wasn't in work before coming into this job – I came straight from school and came to work for the company as a technician.

'While being on the PODP course I've learnt a lot, we have only been on the course for 13 months but it feels like I've gained 3–4 years' worth of knowledge in that time. It's also helped me to really develop my technical knowledge. I've really enjoyed the course and it's been a great opportunity to meet other people in the wider business who have recently joined.'

The PODP was awarded Ofsted 'Outstanding' status in 2023, in recognition of the high quality of training offered and delivered, which has been designed to give apprentices experience of mineral processing mobile and static plant operation, prioritizing practical on-the-job training.

From apprenticeships and graduates through to the retraining of entrants from different sectors with transferable skills, comprehensive training and development opportunities are offered across various levels and roles within quarrying and construction.

One overarching theme across all of Tarmac's training programmes is to encourage behavioural change, as the company aims to make sure that the right people are given the right skills for the job. Crucially, learning is available for everyone – it is open to all ages and backgrounds, encouraging diversity and inclusion and helping to retain talent as the company works to change the face of construction for the better.

Another key aspect in the offering of improved social mobility for Tarmac employees is that the park allows for working and learning simultaneously, a critical factor to make sure that opportunities to learn and develop are accessible to all.

### Linking skills and safety

Across quarrying, road building, and construction in general, safety is a top priority for Tarmac – as it is for the industry as a whole. Almost five years after first opening its doors, encouragingly Tarmac have seen evidenced improvements in their safety record. The Safety Park has been a

major contributing factor to the business's reduction in lost-time incidents from 25 in 2020 to two in 2023, and there has been an increase in proactive safety observations by almost 60% over the same period. As park-leavers progress and graduate into different roles, their skills, knowledge, and behavioural approaches to safety are embedded across operations.

Another notable change that the company has seen as a result of employees taking learning and behaviours from the facility is the effect on sustainability and reducing emissions. Acknowledging that no one individual alone can meet the challenge of climate change, the company needs all employees to adopt the correct behaviours to help play their part in reducing carbon.

Tarmac have also recently partnered with SMT to roll out a dedicated eco-operator training course for their front-line heavy mobile plant operators, increasing awareness and understanding of the impact of everyday decisions that are made on sites to reduce emissions.

## The changing face of quarrying and construction

The challenges of addressing social mobility and the industry skills gap are not simple issues that will be easily overcome. Whilst sector-wide efforts are needed to make real change, Tarmac are aiming to play their part in creating a more inclusive industry that is underpinned by a skilled workforce with the right behaviours to prioritize safety and sustainability. Individuals from all backgrounds and walks of life can benefit from the learning and development offered by sites such as this, bringing equality, diversity, and inclusion to life.

**IQ** The Institute  
of Quarrying

 **mpqc**

# Achieve more together.

The Institute of Quarrying (IQ) and The Mineral Products Qualifications Council (MPQC) will exhibit together on stand H2 at Hillhead 2024.

Co-habiting on one stand underlines our collaborative approach for the benefit of the mineral products sector.

The stand will also serve as a base for many of our partner organisations including the Heavy Clay Technology Association (HCTa), the University of Derby: Centre for Mineral Products, the Institute of Asphalt Technology (IAT), the Institute of Explosive Engineers (IExpE), the Quarries National Joint Advisory Committee (QNJAC) and Minerals Matter.

We look forward to seeing you there.

# BDS: The Changing Demand for Industry Materials

**B**DS, the leading independent market research consultancy specializing in the heavy building materials and waste sectors, annually monitor the changing demand for industry materials across the construction industry. In Great Britain the heavy building materials industry includes the extraction and processing of raw materials to be used within construction projects from both land-won and marine sources. On a material level this includes output volumes for aggregates, asphalt, and concrete, and other downstream products, as well as the current and future activity of companies operating within these sectors.

The construction industry is highly sensitive to changes in the environment and market, and since 2020 material usage and demand within the sector has varied dramatically. Whilst the impacts of COVID-19 contributed towards a lasting dip in industry

material production and demand, additional associated factors, including economic, social, political, and government spend, have also generated further uncertainty, negatively impacting annual volumes further throughout the construction industry.

In 2024, the markets for these products continue to face challenges, including extreme weather conditions, project delays, product and skills availability, economic growth issues, high interest rates, and inflation, all impacting the ability to meet demand within the industry. Even with the implementation of various support measures and action to help the industry from the Government, annual volumes are still not anticipated, by BDS, to recover to pre-Covid levels until at least 2025/26.

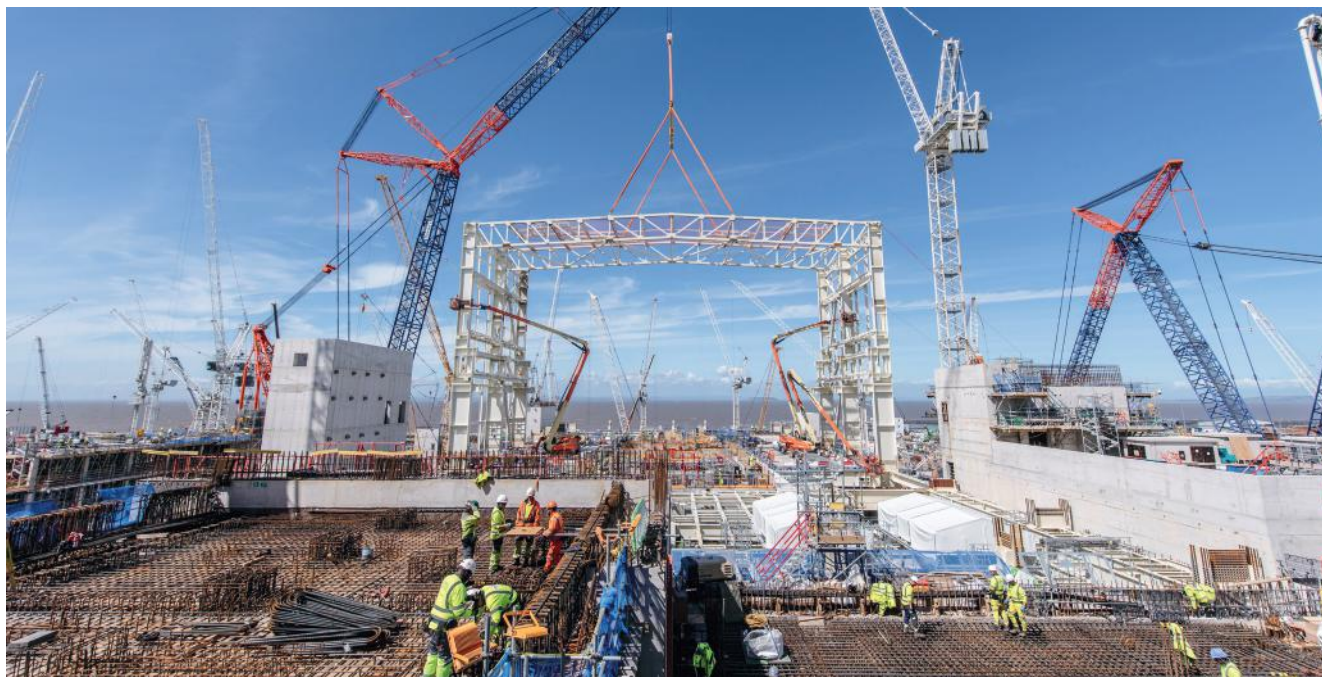

BDS produce annual industry reports and estimated output reports for all sectors of the construction industry. Within

these reports are market overviews and identification of the challenges faced by the industry. An overview of this for aggregates, ready-mixed concrete, and asphalt between 2020 and 2024 is provided below, followed by a look at the key issues and developments affecting market demand from 2020 to 2024.

### Aggregates (2020–2024)

In the year of the COVID-19 pandemic, the aggregates market contracted by around 12% followed by a bounce back to pre-Covid levels in 2021. In 2022, demand started to level out, however a subsequent drop in output of around 8% was experienced due to difficulties in the economic and political positioning. Since this time aggregate demand has continued to decline and even with recent announcements of new funding and

Construction work at Hinkley Point C.

Photo: EDF Energy

realignment of existing funding, optimism in the market remains low. Furthermore, major project delays, the decline in demand for housing, and limited growth in the commercial market continue to negatively impact the use of and the need for aggregates in Great Britain in 2024.

### RMX (2020–2024)

In response to the COVID-19 pandemic, the size of the ready-mixed concrete (RMX) market within Great Britain contracted by almost 16% in 2020. Whilst 2021 displayed a positive performance within the industry with annual volumes returning to near pre-pandemic levels, a later weakening in 2022 resulted in an annual decline of around 4%. In 2023 the RMX market was supported by housing plans and funds to support housing development, however the decline in housing demand continued, negatively impacting the RMX market further. Growth in the sector is anticipated to decline through 2024 before starting to return in 2025, in line with house-building growth and commencement of new construction projects.

### Asphalt (2020–2024)

After the asphalt market plateaued at around 27 million tonnes in 2019, 2020 experienced a sharp decline of 8%, largely due to the impacts of the COVID-19 pandemic. 2021 saw the recovery of the asphalt market with annual volumes exceeding pre-pandemic volumes, initially increasing by 10% in 2021 and by around 2% in 2022. 2023 was a year of identifiable delays in road infrastructure projects and the cancellation of some notable large-scale programmes. This, accompanied by the stagnant housing market, generated uncertainty in the sector. Stabilization in the market commenced in late 2023/

early 2024 due to the redirected HS2 funding to support the expansion of road network improvements. However, due to the extensive road improvements needed throughout Great Britain, it is still not believed this funding will stretch as far as needed to meet the full objectives. Material, labour, and production costs are continuing to increase in 2024 and this is anticipated to result in further product restrictions or materials shortages that could delay the commencement of road schemes, potentially beyond 2024.

### 2020

In 2020, due to the COVID-19 pandemic, the industry experienced an unprecedented six-month closure, only reopening fully with working practice operation restrictions in place for the subsequent 12 months. These limitations negatively impacted production and demand across the construction sector whilst also extending the duration of time for operations in terms of remaining reserves. The further removal of free movement of labour from Europe, following Brexit, generated a decline in staff availability that adversely affected production capacity, the supply chain, costs, and the ability to commence and fulfil much-needed construction projects.

### 2021

2021 was largely a bounce-back year for the construction industry with some sectors reaching near pre-pandemic annual volumes by the end of the year. The commencement and continuation of major construction projects, such as Hinkley Point C, Thames Tideway, and works on HS2, aided the increase in demand for construction materials. Within the National and Infrastructure Pipeline (NIP), published in 2021, the spending of £650 billion of

public and private investment over the next 10 years was identified, including in excess of £200 billion to be spent by 2024/25. The largest proportion of spend (around £70 billion) was identified for transport projects and was to be allocated over a four-year period. Towards the end of 2021 an additional £1.8 billion was also announced to support the development of 160,000 greener homes, helped by the freeing up of brownfield sites.

### 2022

After a positive 2021, 2022 experienced a decline in sales across the construction industry due to the developing 'cost of living' crisis, stagnation in market demand, and political uncertainty. These factors, accompanied by the impending recession of 2023, increases in bank rates, doubling of inflation rates, and increases in house prices, all negatively impacted demand for construction materials across Great Britain. In late 2022, further unrest in the economy was experienced from political leader insecurity and the delivery and reversal of the mini-budget. For the aggregates sector specifically, a freeze on the Aggregates Levy was welcomed, however this was short-lived with increases being outlined less than one year later. 2022 did foresee the Government commitment to deliver £600 billion of infrastructure projects over a five-year period, however with remaining difficulties with labour shortages and materials costs, projects started to display signs of delay or in some instances cancellation. Further weakening within the housing market and failure to meet the Government target to build 300,000 new homes each year, plus the continuation of the Ukraine war, only generated a further increase in concern and industry uncertainty. ➤

Reapportionment of the £36 billion 'saving' from the cancellation of Phase 2 of HS2 saw a further £8.3 billion allocated to improving the road network across England over the next decade. Photo: Tarmac

## 2023

In 2023 interest rates continued to climb severely, impacting housing demand by reducing the purchasing power of consumers and generating a decline in profit margins for private investors. The Government implemented a number of housing plans and schemes in 2023 to address this, including an extension to the Mortgage Guarantee Scheme, operational until June 2025, to support buyers taking out a mortgage on a 5% deposit on house purchases up to £600,000. By mid-2023 the Government released a long-term housing plan to address the current housing shortage and the provision of safe and affordable homes. The plan encompasses a series of measures to increase housing supply and regenerate inner cities and, as part of the initiative, the Government committed £800 million from the £1.5 billion Brownfield, Infrastructure and Land fund to develop up to 56,000 new homes in disused brownfield sites across England.

In line with the 'Levelling Up' mission plan to increase first-time buyers, the Government outlined plans to facilitate the development and regeneration of underutilized sites, such as office space and department stores, into habitable spaces nationwide. The commercial sector, including retail, office, and leisure, that had seen no growth in recent years, was also allocated £3.8 billion funding, chiefly through town-centre regeneration projects. A later amendment to the Levelling Up and Regeneration Bill in 2023 removed the requirement for developers to adhere to EU environmental regulations on nutrient neutrality when building new homes. It was believed this change could facilitate the

construction of an additional 100,000 new homes between 2023 and 2030, potentially helping to boost economic growth in the UK by £18 million.

Whilst positive impacts were being made within the housing market, an increase to the Aggregates Levy was announced in late 2023, raising the rate as from April 2024 to £2.03 per tonne of aggregates. In autumn 2023 around £1.4 billion was allocated by the Department for Transport (DfT) to support the Government's contributions to the 2020–25 Major Road Network (MRN) and Large Local Majors programme, with a further £4 billion outlined for a Phase 2 in 2025. Investment will focus on maintaining the existing road network rather than the construction of new roads. Major schemes identified to benefit include the £9 billion Lower Thames Crossing and £1.7 billion Stonehenge A3030 Improvement, however both have already faced commencement delays.

In the 2023 Budget, £200 million of funding was issued towards pothole repair for 2023/24, and in October 2023 an announcement was made cancelling Phase 2 of HS2 and a reapportionment of the £36 billion 'saving' to Network North. This reapportionment included the expansion of Northern Powerhouse Rail, with a further £8.3 billion allocated to improving the road network with resurfacing works for more than 5,000 miles of roads across England over the next decade. 2023 also saw the DfT pledge £1 billion roads packages in northern and southern England, respectively, as well as £650 million to the Midlands Road Fund. In 2023 work on Phase 1 of HS2 continued at pace and, along with other

key projects such as Hinkley Point C and Thames Tideway, infrastructure continued to protect demand for aggregates. 2023 also detailed the Government's continued commitment to £600 billion investment over the next five years identified in the National Infrastructure and Construction Pipeline.

## 2024

The start of 2024 has experienced difficulties due to weather conditions impacting work and extending timelines for construction operations. Additionally, delays and realignment of funds for existing road network projects have generated extra pressure on the construction sectors in addition to remaining difficulties with the continuing uncertainty associated with inflation, high interest rates, and low income. For the housing market, a fall in house prices in 2024, alongside a lowering of mortgage rates, may help to increase consumer affordability and help kick-start the home-buying process amongst consumers. In April 2024 the Affordable Homes Programme, providing grant funding to support the development of affordable housing, was updated. The current programme (2021–2026) aims to deliver around 180,000 new homes, with many offered at discount rent or as part of a shared home ownership programme, and defines £12.2 billion investment to meet this demand. At the start of 2024 interest rates remain high, impacting the cost of new projects, however the anticipated lowering of interest rates in the summer 2024 may help the private and industrial sectors, with consumers now choosing to spend on home improvements rather than save further, alongside the easing of financial borrowing and investment.

Previously confirmed government investment projects continue to be problematic in 2024 with many approved projects still delayed due to cost and the continuation of labour shortages. The building of new hospitals and schools is expected to increase over the forthcoming years to meet the commitment made by the Government in 2019 in the Health Infrastructure Plan and the School Rebuilding Programme, updated May 2024, but these too could face similar cost- and labour-associated delays in future months and years.

QM

## Who are BDS?

BDS is an independent and innovative market research consultancy with more than 30 years' experience specializing in the minerals, heavy building materials industries, and waste sectors. BDS have three strands providing marketing intelligence, insight and reports, and bespoke consultancy in the following areas: aggregates, ready-mixed concrete, asphalt, cement, concrete Products, waste management, and related sectors. ## AMC Mecanocaucho PB5

AMC are designers and manufacturers of anti-vibration mounts and noise insulation composites. Since 1969, the company has been developing noise and vibration solutions, with products combining materials such as rubber, metal, springs, and Sylomer to provide isolation to a wide range of applications. AMC carry a wealth of experience in the vibration isolation of vehicle applications with technical capabilities to perform non-linear six degree of freedom and shock simulations. This allows the company to accurately predict the vibration isolation performance and analyse the forces introduced to the system during shock conditions. AMC's technical assistance extends to physical on-site measurements, so they can validate theoretical calculations and provide customers with the data required to meet machine sign off criteria. AMC also provide anti-vibration calculations and associated technical engineering services. Industrialdea Zona A Pab 35, Asteasu, Guipuzcoa, 20159, Spain

## Autopak Machinery Ltd RC18

Autopak Machinery are a family-run business with more than 30 years of experience in the bag filling and weigh equipment sector, with a specialty in powder handling. At the forefront of handling powders, minerals, aggregates and refractory materials, the company designs and manufactures its valve sack packing systems in Nottingham. Autopak can supply a full production line to help make projects simpler for their customers. They are system integrators for robot palletisers, pallet wrapping systems and other end of line equipment. This year, Autopak are proud to announce their AP-4000 integral air packer – a fully automated valve sack packing machine.

## Barrus Ltd C39

Barrus will be showcasing the latest EU Stage V-compliant engines from Yanmar and John Deere. The 4TN101 and 4TN107 units are a result of Yanmar's broad experience and commitment to producing the best high-power, most fuel-efficient diesel engines. Extending Yanmar's current power range up to 155kW, both engines combine durability and robustness on one side with class-leading low fuel consumption and high-power density on the other, making them suitable for many off-highway applications. Designed to meet market

## Bateson Trailers Ltd C33

Established in 1934, Bateson Trailers manufacture a wide range of plant and machinery trailers – up to 3,500kg gross weight and all with European whole vehicle type approval. Company products include general-purpose trailers suitable for grounds maintenance equipment and platform trailers up to 7m long. At Hillhead 2024, on display will be a 35MD excavator trailer suitable for mini diggers (up to 2,800kg). The company manufactures several variations of this model to transport larger items of equipment such as dumpers and hydraulic tilting for scissor lift platforms. Special lighter models are also available for tracked post drivers and stone crushers weighing up to 2,900kg. Another product on show will be the versatile PT56 three-axle hydraulic tilting transporter, which has been designed to transport low vehicles and a wide range of plant and machinery. There will also be the 353H model, a 3.5-tonne tipper and an unbraked quad bike trailer.

### BDS Market Intelligence PC17

Established in 1989, BDS Marketing Research (QMJ) Ltd is the leading independent marketing and market research consultancy specializing in the heavy building materials and waste sectors. BDS undertakes bespoke research projects for individual clients on a confidential basis. These can include commercial due diligence, analysis of markets, prices and competitors, new product development, and other market research. Every year, the consultancy firm publishes a portfolio of publicly available industry reports, providing estimated volumes and market shares across key markets. These include aggregates (primary and recycled), asphalt, ready mixed concrete, concrete products and cement. In addition, BDS publishes individual specialist surveys, sector reviews and analysis on a periodic basis.

### BlakerTech Advanced Recycling Equipment

C5

West Sussex-based Blaker Tech are renowned for manufacturing and refurbishing metal recycling equipment and will be showcasing their two flagship products – MagThro and SandFlo. SandFlo employs a fluidized bed separator using aerated sand to sift through non-ferrous metal fragments, screened to 50mm, based on density. Its ingenious design ensures continuous sand particle recirculation, making it ideal for recovering low-density materials (eg aluminium) from higher-density materials such as zinc, copper and brass from mixed non-ferrous metals. MagThro is the company's magnetic recycling system, which boasts exceptional high energy efficiency, extracting non-ferrous metals from mixed materials through a dry process. Notable features include 12-pole magnetic shafts, neodymium rare earth magnets, an adjustable eccentric rotor and versatile splitter options. With

belt widths ranging from 500mm to 1,500mm, MagThro offers premium performance with ease of use.

## **British Aggregates Association** **PC15**

The British Aggregates Association was formed in 1999 and is now firmly established as the voice of the UK's independent SME quarry operators. The BAA is run daily by people experienced in all aspects of the minerals industry. The association provides essential support and advice in all health and safety, planning, transport, environmental, technical and regulatory issues, whilst ensuring that the voice of the independent sector is heard at all levels of the UK administrations. In addition to receiving highly skilled support, BAA members benefit from direct access to top decision makers in government. 1 Fir Road, Dovey FK16 6HU 01786 842483 enquiries@british-aggregates.com www.british-aggregates.co.uk

# GAME-CHANGING FUEL EFFICIENCY

After a decade of engineering innovation, our next generation engine platform for industrial operations is here, ready for the challenges of today and tomorrow. More efficient, more powerful and more durable – all powered by cutting-edge technology. Scania has raised the bar.

Our new platform unlocks increased value from every drop. An up-to seven percent improvement in fuel consumption combined with an extended engine lifespan means you get more for longer. And reduced CO2 emissions across the range means you also get ready for sustainability regulation.

**Step into the future of power solutions.**

## Exhibitors A-Z

Brokk will be showcasing their new range of SmartPower+ robots

### Brokk UK Ltd

V17

Brokk, a world-leading manufacturer of remote-controlled robots, will be showcasing their ground-breaking new range of SmartPower+ robots, with the 170 and 200+ models on display. The company will also be showing the Vac Ex 120d, a unique hose-management carrier which was first discussed at Hillhead 2022 and is now a global product success. Other exhibits on show will include the Revijey 270 road-towable pump, 410 robot model, and Ergo system. Sharing the Brokk stand will be Bricking Solutions of America, who will be highlighting safety cages, ramps, and bricking riggs with showgoers.

### Brown McFarlane Ltd

PA16

Brown McFarlane are one of the UK's leading suppliers of quenched and tempered, and wear resistant steels developed for industrial and high-wear applications where a combination of strength and toughness are necessary. The company's comprehensive range of abrasion-resistant steels can be easily welded and fabricated in line with manufacturing guidelines. Material grades include the Quard 400, 450, 500 brands, as well as the exclusive Creusabro 4800 and 8000 brands in the UK. Additional services offered by Brown McFarlane include edge preparation, rolling, grinding, drilling, countersinking and in-house machining services.

### Bruce Materials Processing Solutions

C21

Bruce Materials Processing Solutions are a global manufacturer and distributor of washing equipment for over 65 years, providing solutions for the quarrying, minerals extraction, recycling, and waste management industries. Bruce will be showcasing their robust BWR-TL modular wash plant, comprising of a DV7 double-deck pre-Screen, BWTL twin-shaft logwasher, trash screen and TV7 triple-deck washing screen. Easily integrated with a sand plant and wastewater treatment system to provide a complete washing solution. Bruce wastewater treatment partner, Tecnoidea, will also be promoting their products which include a vertical pump, flocculate dosing station, automatic sampling station and sludge pump. In addition, a full range of Bruce spare parts and Hardox Wearparts will be on display. 33 Lindesayville Road, Cookstown, Co. Tyrone BT80 8UH

### Bucher Municipal Ltd

V8

Bucher Municipal manufacture and supply the highest-quality machines for the road sweeping, sewer cleaning, and winter maintenance industries. With a 200-plus year heritage, the company is constantly driven by

change, ensuring cleaner and safer environments, while embedding continuous improvement into everything it does. Bucher Municipal continue to focus on the evolution of products with a strong focus on quality and reliability. As the industry looks forward towards a greener future, the business now offers an electric vehicle alternative across all its divisions, reducing operational costs and significantly reducing emissions. Further environmental benefits include reduced fuel consumption, improvements in air pollution, and saving millions of litres of fresh water annually. With seven strategically placed service centres across the UK, backed by a team of 50 fully trained mobile service engineers, Bucher Municipal's expertise, aftermarket support and availability are always within easy reach. The company strives to develop intelligent solutions to meet current demands and stay ahead of future change, paving the way for smarter technologies and alternative energy sources.

## Bunting

C9

Bunting's extensive range of magnetic separators and metal detectors stop costly equipment damage by separating and locating tramp metal. The company's eddy current separators enable valuable non-ferrous metal recovery from waste. In quarries and mines, Bunting's overband magnets, suspension magnets, pulley magnets, and industrial metal detectors find and remove metal to protect crushers, screens, and conveyors. In recycling operations and on mobile plant for construction waste recycling, Bunting's overband/pulley magnets separate ferrous metals, the eddy current separator recovers non-ferrous metals, and industrial metal detectors identify metals, including manganese steel. The Bunting range of overband magnets includes both permanent and electromagnetic models. The permanent overband magnets feature models that include the globally popular PCB. The electromagnetic range of overband magnets includes the ElectroMax-Plus, which delivers increased metal separation power whilst remaining compact and lightweight. Bunting's industrial metal detectors are a common feature in many plants, with the models TN77 and meTRON 05C offering differing sensitivity levels for every application.

## C.Scope International Ltd

RF4

C.Scope International Ltd are a UK manufacturer of underground pipe and cable location equipment with a global sales, service and support network. At Hillhead 2024, C.Scope will be showcasing the XL4 range of reliable and robust cable avoidance tools and signal generators. The XL4 cable avoidance tools feature an automatic daily self-test (ADST), which ensures that they are fully functional before usage. They require no periodic servicing or calibration, which equates to a significant saving of maintenance costs. With optional data-logging, onboard GPS, and Bluetooth connectivity, the cable avoidance tools, and signal generators deliver a trusted

solution to the problem of detecting buried services.

## Cabcare

B9

Cabcare are the UK's leading manufacturers of vandal and demolition guards for all types of construction, demolition, and forestry machinery. Their products are recommended and fitted by all leading machinery manufacturers, and they also offer a comprehensive range of spare parts and an on-site fitting service anywhere in the UK. Cabcare's FOPS-certified demolition guards, both chassis and cab mounted, are designed and manufactured to exceed all current safety standards, providing significant benefits over OEM guards, including front peak, skylight opening, removable front, easier front window

cleaning, and vandal guard fitting. Cabcare's handrails or 'boxing rings' are designed to meet current safety standards and protect the operator when working on the rear of the machine. The handrails incorporate flexible joints, preventing the issues associated with the traditional systems. Unit 20, Raleigh Hall Industrial Estate, Eccleshall, Stafford ST21 6JL

## Carl Stahl Evita Ltd

PB14

Carl Stahl can offer a wide range of standard lifting equipment solutions to common lifting problems, as well as providing specific advice and bespoke designs for more unusual lifting requirements. The company's range of products includes: permanent magnet lifting magnets; electromagnetic lifters; chain slings; webbing and round slings, shackles; Diepa crane rope; general purpose wire ropes; load balancers; and crane systems. Carl Stahl also supply lifting points/beams, plate clamps, grabs, electric chain hoists, chain blocks, digital load cells, hand winches, fork lift attachments, and vacuum lifters. Carl Stahl's professionally trained and accredited engineers can carry out statutory thorough examinations of lifting equipment in accordance with LOLER (Lifting Operations and Lifting Equipment Regulations) requirements. Carl Stahl Evita have been providing industry benchmarked essential training for a number of years and the Evita name has become recognized throughout the world as 'the standard' when associated with wire rope and lifting gear inspections and examination.

## CASE Construction Equipment

X10

CASE will be showcasing new wheel loader and crawler excavator additions at Hillhead 2024, as the company looks to an electric future. CASE will have a wide spread of equipment on display, both static on the stand and working in the exhibition's demonstration areas. While CASE will display a range of excavators, from mini and midi compact models, through to larger, heavy crawler machines, much of the focus for the show will be on the new CX210E-S tracked excavator. Customers looking for a premium wheel loader will be drawn to the new 651G 'Evolution'. Built to sit between the proven 621G and the 721G models, the 651G boasts increased loading performance. Providing a glimpse of the future, also on display will be the first CASE full electric compact shovel. The battery-powered 12EV model joins the company's electric mini-excavators in a growing zero emission CASE line-up.

Keen operators will also be able to try their hand at the controls of the company's compact machinery in an exciting, fun operator challenge that will take place on the stand throughout the event. The equipment lines will be backed up by a full range of CASE parts and service solutions, along with CNH Capital financing services and undercarriage products from CASE partner Sampierana.

and sustainability that you'll need to succeed.

Conn-Weld's extreme-duty vibrating screen

## Concrete Canvas Ltd

PA40

Concrete Canvas manufacture four award-winning products based on their core material technology – geosynthetic cementitious composite mats (GCCMs). These are flexible, concrete-filled geotextiles that harden on hydration to form thin, durable, waterproof and lower-carbon concrete layers. GCCMs were developed initially to the award-winning Concrete Canvas Shelters and Concrete Canvas (CC) products. The company is also behind the development of CC Hydro GCCB (geosynthetic cementitious composite barrier) – a revolutionary containment product, combining concrete geotextile technology with a chemically resistant geomembrane backing, essentially removing the need for concrete, soil or aggregate top cover, which is typically required with conventional liner systems. Concrete Canvas have recently launched CCX which has been specifically designed for canal lining and to remediate bulk water infrastructure, significantly reducing water loss in canals, waterways and hydroelectric channel lining. All products are manufactured at the company's Cardiff-based

headquarters and exported to 80-plus countries. CC products have gained market acceptance as a cost-effective alternative to conventional concrete in various applications, from channel lining to weed suppression.

## ConSpare Ltd

F6

Established in 1978 as mixer maintenance specialists, ConSpare have evolved to become a key problem-solving partner to the industry, working with customers to transform the concrete production process. Through a combination of high-performance components and expertise, the company solves batch plant problems, from the start of the process to the finish.

At Hillhead, ConSpare will show how they can help make concrete plants/components and production more sustainable, whilst highlighting how batch plant equipment selection and maintenance decisions can have a positive impact on the welfare of site staff. Exhibits will include the revolutionary TEKA THT turbine mixer, WAM SILOTOP polyTUBE silo venting filter, Hydronix microwave moisture equipment, belt conveyor components (eg STARCLEAN) and a wide range of mixer wear/spare parts. There will also be a display of products covering mixing, conveyor improvement, wear and flow linings, silo components, moisture measurement, truck mixer cleaning, and much more.

## Construction Plant-hire Association (CPA)

RD9

The Construction Plant-hire Association (CPA) is the leading trade association for plant hire in the UK, established for 80 years and with over 1,900 members who supply more than 85% of hired plant to the construction industry. The CPA produces a comprehensive range of plant-related safety and technical publications and updates covering health, safety, technical and operational requirements, all developed with input from the HSE and industry representatives. All are available as a free download from the CPA website. The CPA team will be on hand to welcome existing and potential members, to provide general advice and guidance to support member's businesses, and to answer member and industry queries on the activities the association is currently involved with, including apprenticeships, skills and training, zero-emission initiatives, technical updates, and regulatory matters etc.

## Continental

U2

Continental Tyre's range of earthmover tyres are specially designed for the very harsh conditions of quarries, construction sites, and surface and underground mines. At Hillhead, the company will be exhibiting tyres from its earthmoving, construction, and waste/recycling product ranges. In addition to tyres, Continental will promote their ContiConnect digital tyre-monitoring system. By digitalizing tyre-monitoring activities with ContiConnect, operators can manage their fleet's tyres, increasing uptime and optimizing machine efficiency. All Continental radial earthmoving tyres

are equipped with the company's intelligent tyre sensor, which can also be retrofitted into Continental, ContiRe and Bandvulc truck tyres. Continental Tyres also offer a consultative approach to sourcing the best tyres and solutions for businesses. Botanica Ditton Park, Riding Court Road, Datchet SL3 9LL

## Cummins UK Ltd

W16

Cummins engines provide a range of power solutions for quarrying and construction machinery. Easy-to-install and cost-effective Performance-Series engines from 75hp to 675hp (55kW to 503kW) are available in displacements from 3.8 litres to 15 litres and deliver high power density. Also available as power units, they can be supplied with

cooling system, exhaust aftertreatment, air cleaner, and mounting feet in a ready-made package to reduce engineering costs, making them ideal for crushing, screening, pumping, and compressor use.

The B6.7 and L9 engines offer optional single and dual rear-engine power take-offs, driving up to 560Nm of additional pumping capability. Delivering high performance with excellent fuel efficiency, Cummins' durable high-horsepower engines (760hp to 1,200hp/567kW to 895kW) are suited to powering larger quarrying machines and dumptrucks up to 100 tonnes capacity. Complementing the company's engine solutions is PrevenTech – a digital monitoring and reporting platform for Cummins high-horsepower engines that provides advanced detection of potential equipment health issues. Continuous equipment analysis helps mitigate performance impacts and improve productivity by streamlining maintenance and service planning, resulting in increased uptime and reliability. Cummins also offer a replacement engine service, to keep current equipment running for longer. 40–44 Rutherford Drive, Park Farm Industrial Estate, Wellingborough NN8 6AN

## Dini Argeo

PD11

Dini Argeo are an Italian manufacturer and distributor of weighing solutions. Founded in 1846, Dini Argeo's facility in Modena, Italy, today serves as Rice Lake Weighing Systems' primary European manufacturing, distribution and support centre, allowing the Rice Lake Group to provide quality weighing solutions and customer service globally. Regardless of the nature of the materials to be weighed - ore, metal slabs, marble or iron granules - Dini Argeo offer innovative and reliable solutions for weighing heavy loads. Many companies are increasing profitability by optimizing production using accurate weighing systems and heavy-duty scales help reduce costs and losses resulting from insufficient or excessive loads. From vehicle scales, which can be installed flush or above the floor and are suitable for heavy loads, to scales for silos, tanks and hoppers, the company provides high-end equipment for the mining industry's most demanding requirements.

## Distag QCS UK Ltd C26

Distag QCS UK are a leading manufacturer and distributor of high-quality industrial components to the materials processing, agricultural and related sectors. Supplying both OEM and aftermarket products, the company's portfolio includes hydraulics, power transmission, agri/trailer parts, and bespoke engineered products.

11 Cookstown Road, Dungannon, Co. Tyrone BT71 4BB  
028 9263 3380  
www.distag.com

## Doctor Air-Brake RA14

Doctor Air Brakes' first design was the Trailer-Check which focused on providing a completely portable 24V

power box for trailer electrical systems.

This was soon followed by combining Wabco and Haldex code readers into one easy to use package and this diagnostics development continued up to 2006, when the decision was made to invest heavily in Code-Talk – a combined diagnostic fault code reader specifically designed for trailer ABS and EBS braking systems. Robin Arnold, an electronics designer, and Jeff Lowe, the founder for technical support on ABS and air brake fault finding worked tirelessly to simulate faults in various ECUs and record diagnostic messages logged. These were then decoded and displayed in English on a small LCD display and as each make and variant were added, the code built up into a library totalling 24,000 lines of codes and the project was completed in June 2009. Development continued and new ECUs were released by three global brake manufacturers.

Unit 2 Parkside Garage, Old Stafford Road, Wolverhampton WV10 7PH

## Donaldson RC25

Donaldson Company Inc are a global leader in providing advanced filtration systems for the mining and construction industries, specializing in equipment and dust-collection solutions designed for challenging environments. Their range of products includes essential filters for mining and construction machinery, such as air, lube, fuel, and hydraulic filters, which are crucial for maintaining the efficiency and longevity of heavy-duty

equipment (eg excavators dumptrucks etc). In the area of dust collection, Donaldson excel with systems tailored to mitigate airborne contaminants produced during operations. These systems capture fine particulate matter – crucial for worker health and environmental compliance. Donaldson's filtration solutions not only ensure operational efficiency and machinery durability but also enhance air quality and safety in mining settings. Through innovative technology, Donaldson continue to contribute to the mining and construction industry's sustainability and efficiency objectives whilst protecting equipment, personnel, and the environment.

## Engines Plus Ltd M7

Engines Plus will be attending Hillhead 2024 with several key brands for the industry. The company is the UK distributor for Isuzu industrial engines, Kioti products and Raywin engines. Engines Plus also supply products which meet the stringent

emission, EU/UK NRMM Stage 5, as well as lesser regulated engines for the global marketplace. Unit F The Aquarius Centre, Edison Close, Waterwells Business Park, Quedgeley GL2 2FN 01452 729707 [sales@enginesplus.co.uk](mailto:sales@enginesplus.co.uk) [www.enginesplus.co.uk](http://www.enginesplus.co.uk)

## Enviro Volumetric Mixers Ltd C13

Based in the heart of the Midlands, Enviro Volumetric Mixers are UK manufacturers of the volumetric concrete mixer – a machine developed from the eyes of an operator. By selecting world-leading suppliers, with outlets across the UK, the company has maximized its capabilities for both manufacture and field support. 158 Barkby Road, Leicester LE4 9LF 0116 260 4070 [www.envirovolumetric.co.uk](http://www.envirovolumetric.co.uk)

## EPC United Kingdom Ltd B21

Commercial explosives and drilling and blasting specialists EPC-UK and EPC Metrics will be showcasing their new ROG+ blasting service which, by continually measuring downstream blast impact to adjust future blasting decisions, adds value from face-to-gate and mine-to-mill. EPC-UK will also be demonstrating the POLAREX MINI OP (open pit) down-the-hole measurement device, which delivers key information to improve drilling accuracy and provide optimization of explosive energy. Additionally, visitors to the stand can find out more about EPC Metrics' new Vibraquipo vibration measurement service, alongside EPC-UK's established drilling and blasting solutions. 1 Venture Crescent, Nixs Hill Industrial Estate, Alfreton, Derbyshire DE55 7RA 01773 832253 [info@epc-groupe.co.uk](mailto:info@epc-groupe.co.uk) [www.epc-groupe.co.uk](http://www.epc-groupe.co.uk)

## Eriez F7

Established in 1942, Eriez are a global leader in separation technologies. A commitment to innovation has positioned Eriez as a driving market force in several key technology areas, including magnetic separation, flotation, metal detection and material handling equipment. The company's 1,000-plus employees are dedicated to providing trusted technical solutions to the mining, food, recycling, packaging, and aggregate processing industries. Headquartered in Erie, Pennsylvania, the US, Eriez design, manufacture, and supply on six continents through 12 wholly owned international subsidiaries and an extensive sales representative network. The company produces more than 1,000 types and sizes of magnetic, vibratory, and metal

detection equipment. It understands the importance of reliable separation for the quarrying, construction, and recycling industries, and offers an extensive range of custom/stock equipment, including suspended permanent/electromagnets, MetAlarm metal detectors, vibratory feeders, and eddy current separators to reliably separate and move materials and protect expensive equipment from costly damage caused by tramp metal. ## Fireward Automatic Fire Suppression S12

Vehicle fire-suppression specialists Fireward will be exhibiting their market leading automatic fire-suppression systems for mobile plant and equipment. The company's Dual Agent systems are an outstanding fire-suppression method, thanks to the combined benefits of dry powder and wet chemical in one solution. Using both wet and dry agents reduces the chances of fire reigniting after discharge. Not only can the system provide rapid-fire knockdown and excellent coverage with the dry powder, but with the cooling properties of wet chemicals, the system is economical and efficient. Fireward systems are certified to a range of industry leading approvals, including P-Mark SPCR 199 and ActivFire AS5062:2016.

## Haver & Boecker Niagara PA3

Haver & Boecker Niagara are a leader in screening and pelletizing, with a mission to deliver the best of these technologies to customers in the mining, minerals, aggregates, cement, construction materials, fertilizers and salt industries. With deep roots and years of experience in these industries, the company uses innovative and shared technologies to effectively meet the needs of customers around the world. The sustainable handling of raw materials is its highest priority, and Haver & Boecker Niagara are developing processing technology that is reaching more outcome by using less material. The efficiency-enhancing Niagara N-Class eccentric inclined screen optimizes crushing plants and screening operations. It is built with an advanced four-bearing design that minimizes structural vibration and maintains constant g-force, despite fluctuating material feed rates. The N-Class is ideal for reducing loads and energy demands for a crushing plant by providing more consistently sized material to improve crushing efficiency.

## Holemaker Technology

V18

HMT are specialist manufacturers of portable metal cutting and drilling solutions. New products being demonstrated on the company's stand include: the V36 Cordless Magnetic Drill, the most compact and lightweight unit in its class; an expanded range of products and sizes for drilling and modifying Hardox steels; and a unique, impact-rated bolt extraction system for removing stuck or damaged bolts and studs. Additional demonstrations will show how to speed up drilling, enlarging, tapping and countersinking metal with VersaDrive, the world's first Impact-rated, modular cutting system for metal, whilst improving safety, increasing productivity and improving jobsite flexibility. There will also be specialist advice on improving workflow, speeding up jobs, and overcoming challenging metalworking applications. Bridge House, Pattenden Lane, Marden, Kent TN11 9QJ

## HPC Compressed Air Systems

B6

The HPC KAESER partnership offers a wealth of experience and expertise in the field of portable compressors and related accessories. Meeting the demands of the UK portable compressor plant hire market, HPC KAESER MOBILAIR screw compressors are powerful, portable machines for providing compressed air on construction sites for road breakers, power moles, sand blasters etc., or as temporary units for specialist applications. A wide range of models and options covers every demand from power tools to auxiliary electrical supplies for lighting and welding. The compact M13 provides a free-air delivery of 1.2m<sup>3</sup>/min (42cfm) at seven bar and it can be transported in a small vehicle, whilst the high-performance M255 delivers 26.5m<sup>3</sup>/min (935cfm) at 10 bar and 25.5m<sup>3</sup>/min (900cfm) at 14 bar. The M500-2 delivers 45.8m<sup>3</sup>/min (1,617cfm) at 6.9 bar of 100% oil free air.

# INNOVATIVE SIZER SOLUTIONS

For over 40 years MMD have remained at the forefront of Sizer technology. Combining unrivalled technical expertise, innovation and experience, we develop tailored solutions for a wide variety of materials and applications.

The Twin Shaft MINERAL SIZER™ is a high capacity, reliable and compact machine suited to mobile and semi-mobile systems. The consistent product size and minimal fines generation, together with the ability to process any combination of wet, sticky, hard or abrasive material, has been a successful formula for thousands of installations worldwide.

We have developed the Sizer's range to be able to process harder materials (up to 400MPa), and delivered solutions for in-pit bulk ore sorting – building upon the Sizer's inherent efficiency and sustainability credentials.

To learn more about how we can support your operations towards a safe, efficient and sustainable future, talk to our experts on stand #W15 or contact us via the details below.

## Exhibitors A-Z

The Montabert V4500 rock breaker from INMALO

### Indeco (UK) Ltd

A33

Indeco, an Italian manufacturer of hydraulic hammers, were founded in 1976. At Hillhead 2024, Indeco UK will be showcasing a selection of products from an extensive catalogue of hydraulic attachments covering a range of sectors, including demolition, recycling, and forestry. Unit 12 Oasis Business Park, Road One, Winsford Business Park, Winsford, Cheshire CW7 3RY 01606 597560 enquiries@indecouk.com www.indecouk.it

### Industrial Engines

C36

Established in 1978, family-run Industrial Engines supply a large range of well-known brand, new, used, and reconditioned diesel engines for industrial equipment. Estate Road 6, South Humberside Industrial Estate, Grimsby DN31 2TG 01472 210888 sales@industrialenginesuk.com www.industrialenginesuk.com

### INMALO

A42

Founded in 1946, INMALO are an industry leader in the supply of equipment for the quarrying, recycling, demolition, plant hire and construction market sectors. The company provides premium hydraulic attachments, magnets, crusher buckets, rock breakers, hydraulic quick couplers and an extensive range of dust-suppression systems. INMALO can also deliver rapid and reliable backup support and a comprehensive repair service for all hydraulic plant

and dust-suppression equipment, including a mobile line boring service. The company also carries an extensive range of spare parts for all the manufacturers it represents, providing a fast and reliable response to all customers.

The Workshops, Lower Norton Farm, Sutton Scotney SO21 3NE 01962 760055 sales@inmalo.co.uk www.inmalo.co.uk

### inspHire Ltd

RB19

Leading the Kerridge Commercial Systems (KCS) rental division, inspHire's award-winning rental software solutions are trusted by 25,000-plus daily users across the globe. With tailored packages available for any sector within the rental industry, inspHire's solutions are designed to be rapid, flexible and futureproof, allowing customers to improve efficiencies, reduce costs and boost return on investment (ROI). 5-6 Chase Park, Daleside Road, Nottingham NG2 4GT 0115 979 3377 sales@insphire.com www.insphire.com

### Institute of Asphalt Technology

H2

The Institute of Asphalt Technology (IAT) is the professional body for persons working in the field of asphalt technology and for those interested in all aspects of the manufacture, placing, technology and use of materials containing asphalt or bitumen. PO Box 15690, Bathgate EH48 9BT 0131 3333 953 info@instituteofasphalt.org www.instituteofasphalt.org

### Institute of Explosives Engineers

H2

The Institute of Explosives Engineers is a membership organization promoting the highest standards of excellence in the explosives industry. Encouraging liaison and raising explosives industry standards, the Institute aims to establish and oversee National Occupational Standards for the explosives sector and to provide a forum that enables and promotes consultation between individuals, professional/private organizations, government departments, and armed forces experts within the explosives industry. The Institute actively supports and encourages its members in their professional development by providing mentoring for those seeking professional registration. The Institute of Explosives Engineers also offers a range of education and training services that empower members in their journey of developing new skills and a career within the explosives industry.

Ground Floor, Unit 1, Greyfriars Business Park, Frank Foley Way, Stafford ST16 2ST 01785 594136 info@iexoe.org www.iexpe.org

### Institute of Quarrying

H2

The Institute of Quarrying (IQ) and The Mineral Products Qualifications Council (MPQC) will be sharing a stand, underlining their collaborative approach for the benefit of both individuals and businesses in the mineral products sector. Visitors can talk with both membership organizations and understand how, together, IQ and MPQC can achieve more for their respective members. The IQ/MPQC stand will be staffed to answer questions, with specialisms in areas such as membership, education and training, continuing professional development (CPD), future skills, approved industry standards and regulated qualifications, apprenticeships, Minerals Matter, and the IQ Benevolent Fund (IQBF). Also, on the stand there will be information about IQ Connect. This innovative, simple-to-navigate mobile app provides members with access to learning materials and the latest industry best practices, as well offering an option to browse and register for upcoming events. The app is a convenient and all-in-one pocket resource to manage IQ membership, easily record CPD activities and includes access to a range of industry advice from the HSE, QNJAC as well as the latest guide for handling soils in mineral workings. Visitors to the IQ/MPQC stand will experience a refreshed approach to CPD Select, tailored learning on demand for individuals and employer's needs. With the same great accredited content as IQ's qualifications launched on its new e-learning platform, the approach empowers learners and employers to obtain short, IQ accredited units that can be completed as needed, individually in bundles or in a bespoke package. The online delivery of these training units enables the learner to, with any device, progress their journey to competence through CPD. ## Exhibitors A-Z

John King Chains have acquired DAB Valves, UK valve manufacturers

### **JJ Loughran Ltd** M13

As one of the UK and Ireland's leading providers of engineering solutions, JJ Loughran will be showcasing its key expertise on how to improve energy efficiency in machinery and quarrying operations. The company is a longstanding and reliable supplier of ABB electric motors, Danfoss variable speed drives, and gear reducers from Motovario and Rossi. At Hillhead 2024, JJ Loughran will be sending out the key message that harnessing the power of electrification not only enhances energy efficiency but also contributes to environmental sustainability. By upgrading to advanced electric motor technology and efficient drives, quarry operators can significantly reduce energy consumption and operational costs over diesel engine equivalent powertrains whilst optimizing machine performance.

### **JJMac Ground Stabilisation Ltd** C32

JJMac are a Lincolnshire-based civil engineering, earthworks and groundworks contractor delivering services nationwide, including soil modification, ground stabilization, earthworks and remediation. Ground Stabilization and Soil Improvements using Lime and Cement is a long established tried and tested technique in the UK. These techniques can be used to provide cost-effective, high-performance capping layers for highways, piling platforms, temporary haul roads and compounds. By its very nature of using the in-situ soils to create the capping layers, stabilisation offers other key benefits, such as reduced excavation and disposal and less imported aggregates to site. The team at JJMac can undertake testing and analysis of the current subsoils on site. Once testing is complete, the company's soil engineers and design consultants will provide optimum design and methodology to achieve the required performance specification for a client's application.

Spalding Road, Bourne PE10 0AU  
01778 423904

### **John King Chains** C3

Founded in 1926, John King Group are fifth-generation, family-owned British manufacturers of turnkey materials-handling solutions. Over the past 12 months, the company has experienced exceptional growth, boosted by the acquisition of leading UK valve manufacturers DAB Valves and solidifying its position as a premier supplier of materials-handling solutions. John King employ best-in-class manufacturing techniques, including CNC machining, fibre laser technology, and robotics, to ensure consistently high-quality products. With two UK factories and a further

four worldwide facilities, the company is ideally positioned to service the materials-handling industry globally, with a key focus on delivering solutions timely, efficiently, and safely.

Marshall's Industrial are one of the UK's leading suppliers of industrial engines and components; the company name has been synonymous with the sector since it was established as a family business 100 years ago. Years of industry experience and technical expertise enables Marshall's to readily understand their customers' requirements and offer them long-term support. As the official UK distributor for HD Hyundai Infracore (formerly Doosan) industrial engines, their stand will showcase best-in-class models from the HDI range; the super-compact, low-emission G2 engines available in 1.8, 2.4, 2.4 hybrid, and 3.4-litre variants are fuel efficient, easy to maintain, and meet the latest exhaust emission standards for European Stage V and US Tier 4 Final. The company also offers sales and support for the larger engines (8–22 litres) for re-powering projects and export.

Beadle Estate, Hithercroft Road, Wallingford, Oxfordshire OX10 9DG 01491 834666 [sales@mi-uk.com](mailto:sales@mi-uk.com) [www.mi-uk.com](http://www.mi-uk.com)

## Martin

RD12

Martin Sprocket & Gear are leading manufacturers of power transmission components, material-handling products, and heavy-duty conveyor pulleys. Martin is a family owned, privately held company founded in 1951. The corporate office is located in Arlington, Texas, with over 40 worldwide locations. Martin have strategically positioned themselves around North America and worldwide to serve the needs of customers as efficiently as possible. A large proportion of the business and its success comes from made-to-order products and altered parts. Martin also pride themselves on maintaining large inventories to ensure superior service. The company's 70+ years of experience and dedication in the industrial marketplace has made Martin a household name. Unit 5, S-PARK, Spartan Close, Warwick CV34 6NG 01926 962161 [emeasales@martinsprocket.com](mailto:emeasales@martinsprocket.com) [www.martinsprocket.com/](http://www.martinsprocket.com/)

## Martin Engineering Ltd

RA13

Martin Engineering have a solution for any spillage, blockage or build-up in processing plants and other production facilities, helping to improve safety, boost productivity and maximize profit. Whatever the problem, from load-in to discharge, chances are they have seen and solved it before. Talk to Martin about: Ultimate belt cleaning – Martin's revolutionary CleanScrape primary and secondary belt cleaners and CleanScrape HD for heavy-duty applications are the most durable, flexible, and versatile belt cleaners on the market; Air cannon technology – this year Martin are celebrating 50 years since the launch of the world's first air cannon, designed to dislodge stubborn material stuck to the inside walls of hard-to-access places, eliminating internal build-ups and blockages; Transfer point solutions – the latest innovations in safe, efficient material transfer, from conveyor belt alignment, support structure and side sealing to chute design and tail pulley protection; Remote monitoring – when belt cleaner servicing is required, Martin's pioneering N2 PI system and updates you via an app on your mobile device. N2 reduces physical inspections, saves time and effort, lessens safety risks, and helps control costs. MB Crusher offer a range of crushing and screening buckets

## MB Crusher A32

MB are a leading manufacturer of equipment, machinery and accessories for the construction, demolition and recycling industries. Applicable to any type of excavator, MB products are the most effective in construction and excavation, as well as special applications such as quarries, mines, and environmental rehabilitations. From crushing and screening to separating inert materials directly on site for reuse or allocation for other uses, MB have an ever-expanding range of crusher buckets, screening buckets, grapples, and drum cutters designed to reduce costs, processing time and transportation of materials, whilst reducing the impact on the environment. At Hillhead 2024, the company will be displaying and demonstrating a diverse range of products from its compact and heavy lines.

## HANDRAILS

### Safety Handrails 'Boxing Rings' For Extra Driver Safety

CabCare supplies a wide range of handrails to fit most makes and models of excavators.

The handrails are now manufactured from a larger 35mm diameter tube and can be supplied either in Black or Safety Yellow. Our handrails are designed to bolt onto existing fixings, avoiding the need to drill or weld to the machine.

Most handrails can be fitted in under an hour. Handrails conform to current safety legislation.

## DEMOLITION GUARDS

### FOPS Certified Demolition Guards Bolt-On Rock & Chassis Mounted

- Extended Roof giving better protection.
- Peaked Roof allows skylight to open for better visibility.
- Front Grill allows easy access to front windscreen.
- Certified to FOPS Standard BS EN ISO 3449 & ISO 10262 Level II.
- Bolt-On Guards require no welding.
- Chassis-Mounted Guards weld direct to chassis.

## VANDAL GUARDS

### Vandal Guards offer peace of mind, lower insurance costs, less 'down-time' and are recommended by leading machine manufacturers.

We hold an extensive range of Vandal Guard kits in stock which are available for immediate despatch or can be fitted on-site anywhere in the UK by our trained fitters.

Existing fixing points are used to ensure that the certification of the cab is not compromised.

For more information about the CabCare product range: Visit: [www.cabcare.com](http://www.cabcare.com) Or Call: 01785 851944

## MEKA Global

A18

Founded in 1987, MEKA are wholly Turkish-owned industrial designers and manufacturers and a trusted global brand in crushing, screening and washing equipment, and ready-mixed and precast concrete production equipment. With a worldwide sales and after-sales services network, today MEKA export nearly 90% of their production and rank among Turkey's top 1,000 exporters. The company has five modern production facilities, more than 80 engineers and nearly 500 specialized employees, and has installed over 4,000 facilities in more than 100 countries. MEKA offer a wide range of mobile, stationary, compact, site type, RCC, and precast concrete batching plants to meet the needs of the entire spectrum from the smallest construction site to the largest projects. MEKA also design and manufacture feeders, crushers, screens, wet process equipment, mobile plants of all capacities for new plants or the upgrade of existing plants for aggregate producers, waste recyclers, and industrial mineral processors. ## **Miller UK** **W28**

Miller design and manufacture a wide range of buckets, including, amongst others, an extreme rock bucket ideal for aggressive environments, and an almost 100% robot welded bucket which will be left unpainted at Hillhead to showcase the quality and strength of the welds. Alongside the bucket range, visitors will see Miller's GT Series quick-coupler range, suitable for machines from 1 to 50 tonnes, including the GTS, GTX, and GTT tilt-coupler. Additionally, Miller's award-

winning Powerlatch quick-coupler, suitable for machines from 3.5 to 120 tonnes will be showcased. Miller's new attachment bundles, designed to be cost-effective and easily stored, will also be featured. These bundles, tailored for machines from 1 to 20 tonnes, comprise a quick-coupler and three buckets. Bassington Industrial Estate, Bassington Lane, Cramlington, Northumberland NE23 8AD 01670 707272 info@millergroundbreaking.com www.millergroundbreaking.com

## **Mineral Engineering Processes Ltd** **PB46**

MEP specialize in mineral process engineering, providing sales and service for their specialist range of proprietary equipment, including hydrosizers, thickeners/clarifiers, hydrocyclones, and other allied equipment. They are also UK sales agents for the Pozzato range of log-washers, screens and crushers. The company's USP is efficiency and building plants based on customers' needs. Providing added value to their clients is central to MEP's work designing and developing equipment and solutions for the beneficiation and classification of quality products created from raw minerals. MEP's intention is to deliver the highest-quality service, on time and on budget, providing well-designed, user-friendly machines that exceed customers' expectations. 6 Wilton Business Centre, Kingsway, Wilton, Salisbury SP2 0AH 01722 744799 enquiries@ukmep.com www.ukmep.com

## **Mineral Products Association** **PB15**

The Mineral Products Association (MPA) is the industry trade association for the aggregates, asphalt, cement, concrete, dimension stone, lime, mortar, and industrial sand industries. Its membership spans 16 product groups and comprises the majority of independent SME quarrying companies, as well as the major international companies with operations in the UK, making it the sectoral voice for mineral products. Driving Change... Raising Standards... Improving Perceptions, the MPA represents the interests of its members and the wider industry with all levels of government and vast range of other stakeholders at European, national, regional and county levels, including local authorities, professional trade bodies, conservation organizations, educational institutions, and engineering and architectural practices. Its regional structure, based on UK economic and planning regions, enables the MPA to enter into

dialogue with all interested parties. Expertise and support to members spans health and safety, planning and resourcing, environmental, regulatory and technical, and standards issues at UK and European levels; transport; safeguarding and developing markets plus market information; public affairs and communication; carbon reduction; biodiversity and restoration; and much more. The Concrete Centre provides material, design and construction guidance to enable all those involved in the design, use, and performance of concrete and masonry to realize the potential of these materials. PB50

Momentum Group is a multi-award-winning, UK-based tax credit consultancy firm, whose services include R&D tax credit and property capital allowances. With a proven track record in generating significant financial benefits for businesses across the UK and Ireland, Momentum's tax credit consultants understand how transformative the right tax advice can be in easing financial pressure through reduced tax liabilities. Many businesses are unaware they may be entitled to benefit from specific expenditure in R&D and from property capital allowances. Other businesses who are not taking full advantage of these generous tax incentives available may also be surprised how much they are missing out on. Momentum's extensive experience has been built up from specializing in these niche areas since 2009, making them highly successful at identifying, analysing, and optimizing all qualifying expenditure.

## Monaflex Tyre Repair Systems

RB32

In their 60 years as an industry leader, Monaflex have developed tyre repair systems that are not only quick and easy to use with little training required,

but are also compact, lightweight and fully portable, and, most importantly, provide a distortion-free, super-strong and durable repair each and every time – for every type of tyre on the market. The company's industry experience and vulcanizing technology have also come together in a new conveyor system for both splices and spot repairs. At Monaflex, the focus is reducing the resources needed by your operation and ensuring budgets go further.

### MPQC

**H2**  
The Mineral Products Qualifications Council (MPQC) and The Institute of Quarrying (IQ) will be sharing stand H2, underlining their collaborative approach for the benefit of both individuals and businesses in the mineral products sector. Visitors can talk with both membership organizations and understand how, together, IQ and MPQC can achieve more for their respective members. The IQ/MPQC stand will be staffed to answer questions, with specialisms in areas such as membership, education and training, continuing professional development (CPD), future skills, approved industry standards and regulated qualifications, apprenticeships, Minerals Matter, and the IQ Benevolent Fund (IQBF). MPQC's training division, MP Skills, will be discussing opportunities to join its apprenticeship cohorts for level 2 mobile and static plant operations and will also be reviewing feedback on the MOET apprenticeship proposed scheme of work. In addition, as part of

the Safer by Competence strategy, MP Connect will be showcasing its value to drivers, contractors, and businesses. Minerals Matter will be hosting the visit of students from two local schools, in collaboration with other industry exhibitors, to inspire the next generation with the exciting challenges and career opportunities within the mineral products sector.

## WEAR AND SUPER WEAR STEEL PROFILES

Brown McFarlane is one of the world's leading specialist steel plate Distributors, Processors, and Profilers supplying to many industries worldwide via Western EU mills.

The company's extensive inventory of high-quality standard and wide area steel plates features extensive wear and super wear resistant ranges, used in intense abrasive environments. Quend high strength steel along with Quard and Creusabro Wear Plates provide a cost-effective solution to your profiling needs. Able to withstand over 4 times more abrasion, these plates prevent the need for regular renewal.

Available in a large range of sizes and thicknesses, Brown McFarlane has the ability to process plates up to 150mm thick, 4.4m wide and 18m long in bespoke sizes, profiled and finish machined to your drawings.

With the ability to improve your production rates, streamline in-house manual profile preparation and reduce expenditure, why not ask about our Wear and Super Wear plates today?

## NPORS Ltd

### PC8

Established in 1992, NPORS is an accrediting body and one of the leading construction plant operator registration schemes in the UK. Working to demonstrable national standards, NPORS is recognized by Build UK as an accepted card scheme in the construction sector and, as such, has become a CSCS Partner Card Scheme. Covering all industry sectors including construction, industrial, port, marine, utilities, oil, gas, and agriculture, NPORS offer employers flexibility and a credible choice when deciding which card or certification they wish their employees to hold. In recent years, NPORS has also become heavily involved in assisting organizations abroad in the writing of training standards, particularly in the construction and oil and gas sectors, whilst also maintaining standards in the other industry sectors listed above. The Construction Site Safety Scheme (CSSS) is a collection of health and safety training courses covering operative, supervisor, and management training. These courses, which are recognized by Build UK/ NPORS, have been developed to support industry by providing the understanding and expertise to manage concerns including risks and environmental matters. All courses within the CSS Scheme have been approved and mapped by CITB allowing for grant claims. 12 Brunel Court, Rudheath Way, Northwich, Cheshire CW9 7LP

## Orica UK Ltd

PA34

Orica are one of the world's leading mining and infrastructure solutions providers. From the production and supply of explosives and blasting systems, to their cutting-edge digital solutions and comprehensive range of services, Orica sustainably mobilize the Earth's resources. The company's vision is to transform how drilling and blasting is used to unlock mining value, utilizing digital and automated technologies to create safer and more productive blast outcomes for customers. At Hillhead 2024, Orica's technical specialists will be showcasing the company's latest products and services, such as Exel Neo – the world's first fully lead-free non-electric detonator range, the WebGen wireless initiating system, the next generation of digital technologies and solutions beyond blasting, and Orica's superior rock-on-ground service.

## Orthos (Engineering) Ltd

C15

Orthos Engineering will display a fluid-bed dryer from our partners TEMA Process BV. Used for drying (and cooling) a wide range of industrial minerals, TEMA's shaking fluid-bed technology represents a more energy- and cost-efficient solution than classical style drying machinery, eg drum dryers and belt dryers. In addition to direct heat/fuel sources (gas and/or light oil), heat can be applied via a heat exchanger from other plant processes, such as exhaust/waste heat from a CHP system, thereby reducing energy costs. Dust filtration by the company's own in-house manufactured filter plant is an added advantage of the TEMA Process range. Personnel from both Orthos and TEMA Process will be on hand at the show.

## Padley and Venables Ltd

PB26

Padley and Venables (P&V) have been manufacturing high-quality demolition tools, contractors' tools, and rock drilling tools in the UK for over 100 years. P&V's demolition tools are suitable for use with most types of boom-mounted hydraulic breakers. P&V contractors' tools are for use with pneumatic and electric hammers, includingmoil point concrete breakers, chisel ends, asphalt cutters, easibusts, frost wedges, tarmac cutters, digger steels, clay spades, plugs & feathers, rammer stems and pads. P&V's range of rock drilling products include tunnelling/drifting and extension drilling equipment, shank adaptors, couplings, drill rods, TC-tipped drill bits and reaming equipment, integral drill steels, taper rods and bits, together with the latest tube drilling systems. P&V also manufacture next-generation Ninja button bits. Now available in all sizes, these are optimized for increased lifetime in abrasive rock, offering enhanced chip extraction and superior wear properties.

## Perissinotto S.p.A. - Pemo

Pumps

PC20

Pemo Pumps are widely utilized in the mining, aggregate washing, quarrying, and mineral extraction processes. Designed and manufactured to withstand and efficiently operate with the most abrasive slurries, the pumps are frequently employed for tasks such as feeding the classifier and transporting slurry to the flotation system, tailing thickener and, ultimately, the filtration/dewatering system. Some of the most beneficial features are: abrasion-resistant Pemo design and materials for longer life; corrosion resistant, using the most suitable alloys for aggressive fluids; non-clogging, thanks to the special design of casings and impellers; single, double, or cartridge mechanical seals to prevent leakages and contamination; flowrates up to 2,000m³/h; and TDH up to 160mcl. Via Pascoli, 17, Vimodrone, 20055, Italy +39 02250731 [peris@pemo.com](mailto:peris@pemo.com) [www.pemopumps.com](http://www.pemopumps.com)

## perma-tec GmbH & Co. KG

RD17

Every 11 seconds, a perma lubrication system is installed or exchanged, worldwide. Manual lubrication is a thing of the past. Time-consuming and impractical, it can lead to a rapid aging of the lubricant in the bearing or the lubricant level to fall excessively. Bearings are then subject to greater wear or fail completely. Today, anyone looking for safe, effective, and long-term economical lubrication of equipment takes advantage of automatic lubrication, and perma-tec offer ideal technical and economical solutions for any lubrication point. Hammelburger Str. 21, Euerforf, 97717, Germany 07771 415800 [info@perma-tec.com](mailto:info@perma-tec.com) [www.perma-tec.com](http://www.perma-tec.com)

An aerial photograph of a two-lane asphalt road stretching vertically through a dense, vibrant green forest. A white car is positioned in the lower half of the road, facing upwards. In the upper left corner, a bright, glowing comet or meteor streaks diagonally across the sky, leaving a long, luminous trail. The forest canopy is thick and textured, with varying shades of green.

The road to sustainability is being built.

## Plantworx 2025

PA47

Continuing its tradition of live demonstrations and innovative displays, sales for Plantworx 2025 open this month (June) and further updates on new initiatives are forthcoming. Plantworx 2025 will be the show where emerging and disruptive technologies feature alongside construction equipment, innovation, technology products, and services. The show remains the UK's biennial showcase for the construction sector – and will lead visitors into the future of construction with new dates and a new venue. The 6th Plantworx construction machinery exhibition, hosted by the Construction Equipment Association (CEA), will take place from 23–25 September 2025 at the Newark Showground. Newark was chosen for its superior infrastructure, including permanent walkways and advanced communication facilities. The event will feature 126 acres of flexible indoor and outdoor exhibition space, complimentary parking, and easy access off the A1, with Newark Northgate station just a 5min taxi ride away. Over 400 exhibitors are expected, showcasing the latest in construction machinery, technology, and services, with live demonstrations allowing for realistic displays of equipment in action.

## ProSpare Ltd

**F6**  
Helping companies handling bulk materials and powders solve challenging process problems, ProSpare supply high-performance materials-handling components which are site-proven to improve plant efficiency. Their range of belt conveyor components has made a big impact on the quarrying, cement, recycling and construction industries. The team will be on hand to demonstrate how ProSpare been successful in improving conveyor performance with STARCLEAN belt cleaners, Centrax tracking rollers and the SealTek skirt sealing system. Hillhead 2024 will be the platform for the UK launch of the STARCLEAN Smart Scraper, an innovative conveyor belt cleaner and monitoring system that enables continuous, contact-based control of the conveyor belt and scrapers. ProSpare also provides a wide range of problem-solving components to improve other key pieces of production equipment, including wear and flow linings, flow aids, silo components, and flexible connectors, including BFM fitting.

## QNJAC H2

The Quarries National Joint Advisory Committee (QNJAC) is a tripartite body comprising quarrying and extractive industry representatives – employers, employees, the Government regulator (Health and Safety Executive, HSE), professional membership bodies, trade unions, and industry training/educational organizations. The 'engine room' of QNJAC comprises a series of sub-committees and working groups which focus on subject areas or projects, as required. Working groups look at regulations along with innovations, accident and incident reports, best practice, and new technologies to produce updated guidance. Approved QNJAC output is principally in the form of guidance documents which, when confirmed by the HSE's Publications Governance Group, are published on the QNJAC website. This guidance, along with self-audits, can help employers understand where they are in relation to regulations, create action plans to fill gaps, and apply the regulation in today's working environment. QNJAC is made up of volunteers from quarrying and the related quarry products industry, the overall aim being to help everyone working in the industry, stay safe.

## RaycoSyscomak PA28

RaycoWylie Systems are one of the leaders in the development and manufacturing of a range limiting devices and rated capacity systems for cranes and lifting equipment. Through their heavy machinery subsidiary RaycoSyscomak, this technology is now available in the UK market with a diversified portfolio of products for excavators, wheel loaders, construction trucks, and more. RaycoSyscomak's i4000 range-limiting device optimizes preventive management of construction equipment. As a multifunction indicator, it is combined with the automated lubrication system to reduce maintenance costs and machine downtime. It also offers an essential solution for public safety through the integration of people and plant radar detection systems. Using a single screen interface for the display of the required data, the control of combined systems on one platform makes for an easy and straightforward operation. RaycoSyscomak also offer onboard weighing systems suitable for a range of construction equipment and with the ability to supply data back to a

centralized platform. To better serve international markets, RaycoWylie have offices in the UK, Canada, US, Singapore, and Egypt. 2440 Dalton Avenue, Quebec, G1P3X1, Canada 01424 421235, +1 418 266 6600 syscomak.com

## RBC Dodge Industrial Ltd PA18

Dodge Industrial – an RBC Bearings company – design, manufacture, and supply customized mechanical power transmission products for a wide range of industries and markets across the globe. Dodge's industry and application experts examine complete systems and provide solutions and services that improve operations and increase safety and efficiency for all its partners. For over 140 years, the company has continuously built on its reputation of leadership, innovation, and best-in-class service. ## Re-flow Field Management PC40

Re-flow makes managing remote teams working in construction simple and efficient by reducing complexity and replacing paperwork with an intuitive software platform that is user friendly, highly configurable, and scalable. Re-flow is cloud-based software that provides the highest level of visibility to field operations. It is capable of flexible scheduling, from one-day activities to extended projects, schemes, and frameworks, providing a seamless workflow around worker qualification libraries, asset scheduling, job progress, photo uploads, instant in-app communication, and on-site streamlining of HSE processes, risk assessments, and asset checks. From job packs to a comprehensive library of manuals and documents, operatives have everything they need on their phones, online and offline, with or without signal. Thousands of operatives working in scaffolding, demolition, and roofing nationwide use Re-flow daily – freeing themselves of many inefficiencies and headaches, and making their businesses more compliant, safer, and productive than ever before. 72 Paris Street, The Mount, Exeter EX1 2JY 01392 574002 sales@re-flow.co.uk re-flow.co.uk

## Reactec RA2

Reactec combine advanced connected worker technology with cloud-based Analytics software to help manage common workplace health and safety risks, including exposure to dust, noise, vibration, and dangerous

proximity to heavy plant operations. Building upon the company's hand-arm vibration prevention expertise, Reactec developed R-Link, a new generation of smart watch which is designed to provide a data-driven insight into multiple workplace health risks, including exposure to vibration when operating power tools and dangerous proximity to moving vehicles, active machinery, and unsafe areas, all on a single device. Reactec's ecosystem of workplace wearable technology seamlessly transmits data to the cloud-based Reactec Analytics platform, which collects and overlays risk data from real-time monitoring devices to provide an unprecedented 360° view of the risk environment, enabling the user to make timely interventions and refine controls. Vantage Point, 3 Cultins Road, Edinburgh EH11 4DF 0131 221 0920 sales@reactec.com www.reactec.com

## Red Knight 6 Ltd J7

Red Knight 6 Ltd are distributors of world-leading crushing, screening, and material recycling equipment to the UK and Ireland. Offering a complete end-to-end solution, the company partners with Rubble Master, EDGE Innovate, MDS, Komplet, Nordmann, TrommALL, and IMS to bring the very best equipment to the quarrying, demolition, and recycling industries. All machine sales are underpinned by sister company RK6 Spares, who are dedicated to keeping the machines up and running and are able to provide a wide range of spare parts at short notice from the company's warehouse. ## Rima UK Ltd

### RB23

Rima UK's core business is the design, manufacture, and testing of parking jacks, steel wheels, hydraulic stabilizers, cylinders, ball bearing turntables, slewing rings, steering drawbars etc. They distinguish themselves as one of the few European groups able to combine inline industrial production with small-batch, highly customized products. For more than 50 years their products have fulfilled the stabilization, lifting, movement, and rotational needs and requirements of a vast array of machinery and customers, both large and small, in over 60 countries worldwide. Unit 2, Rash's Green Industrial Estate, Dereham, Norfolk NR19 1JG 01362 697772 sales@rima-uk.com www.rimaspa.com/en

## Ritchie Bros UK Ltd

### RE4

Ritchie Bros provide a one-stop shop for everything equipment and truck businesses need to succeed – buying and selling solutions, market insights and valuation, global buyer demand, and fleet-management tools. With auction sites across the globe, their UK auctions are held at a site in Maltby, South Yorkshire, where buyers are encouraged to come and view the machinery ahead of buying in the auctions. Maltby Colliery, Tickhill Road, Maltby, Rotherham S66 7QW 01332 819700 uksales@ritchiebros.com www.rbauktion.co.uk/

## RMGroup

### A24

RMGroup supply and manufacture a wide range of manual and automated process and packaging solutions, backed by exceptional service and after-sales support. The company's portfolio of solutions includes: Industrial robot pick, place and palletizing systems; high-speed form, fill, and seal packaging machinery (VFFS); pre-made bag placers; mobile

bagging systems; weighing systems; bulk bagging; material handling systems; and automated guided vehicles (AGVs).

Unit C Mochdre Industrial Estate, Newtown, Powys SY16 4LE 01686 621704 www.rmgroupuk.com

## Robert Bosch UK

### PA44

Bosch, the German multinational engineering and technology company, offer a wide range of spare parts to the repair and maintenance market – from new and exchange parts to repair solutions – as well as repair shop equipment such as diagnostic software and hardware. Mobily aftermarket support and service in the UK and Ireland continues to be a key area of business for Bosch as the company can provide a one-stop-shop for test equipment, software and expertise to meet the needs of diagnosis, maintenance, repair and service.

Broadwater Park, North Orbital Road, Denham, Buckinghamshire UB9 5HJ 01895 838932 contact@uk.bosch.com www.boschaftermarket.com/gb/en

## Robson Handling Technology Ltd

### RD13

With over 117 years' industry experience, Robson are fourth generation family owned UK materials handling providers. They develop innovative solutions that address customer handling requirements across industries worldwide, specializing in delivering solutions for cement, aggregates, minerals, biomass, and glass industries. Coleford Road, Sheffield S9 5PA 0114 244 4221 www.robson.co.uk

## Rock Fall UK

### RC1

Rock Fall UK are multi-award-winning safety footwear specialists. Since they began trading 27 years ago, Rock Fall UK have had a positive impact on the health and safety industry. Developing

a strong and loyal distribution base across the UK and worldwide, the company proactively collaborates with major end-users and industry associations to improve workplace safety footwear in accordance with PPE requirements and regulations. ## RSP UK Suction Excavators Ltd

T3

RSP UK were founded in 2016 as the UK subsidiary of the RSP Group, who have been manufacturing premium suction excavators since 1993 when production began in Saalfeld, Germany. Over the last 30 years, the RSP brand has expanded globally, employing 500 people across three continents and with RSP suction excavators now at work in over 30 countries. Since their inception, RSP UK have grown to 40 employees and are trailblazers for technology that improves safety and efficiency across the UK construction, engineering, and utilities sectors. In 2022, RSP showcased their fully electric solution,

their aim being to widely apply the advantages of emission-free suction. The year before that, RSP UK launched a world-first: a suction excavator with breaker boom, and last year brought the first suction excavator with dual tipping to the UK market. 2023 proved to be RSP UK's most exciting year to date, as they rounded up 12 months of significant sales growth with the announcement of an expansion to their product range, further solidifying their position as a leading UK supplier of construction equipment. The first new products to be added to the range are Amphitec vacuum trucks and BROCK sweepers.

## Rubble Master HMM GmbH

J10

It all began back in 1991 when an idea came to Gerald Hanisch, founder and chief executive officer of Rubblemaster HMM GmbH. The goal was to give as many entrepreneurs as possible the chance to use mobile rubble recycling for value enhancement. It was with this innovative concept that RM created a market: on-site recycling. RM crushers and screens come in a variety of sizes for a wide variety of challenges, such as rubble, asphalt, and concrete as well as riverbed material, basalt, limestone, and granite. Operators can choose from numerous options and add-on equipment for their own customized package.

## SBM Mineral Processing N16

SBM Mineral Processing, the Austrian specialists in track-mounted hybrid electrified crushing plants, is coming to Hillhead 2024 with a diverse range of machines and strong dealer support: 'For the first time, the quarry show is more than just an important away game for us. We have been working very successfully with our distribution partners Banner Equipment and Orba Group for almost two years now and can now prepare even better for the industry highlight,' explained SBM area sales manager Norbert Dieplinger. 'Within a short period of time the strong dealer commitment has not only given us a high level of national awareness in all parts of the country, we have also reached all the industries relevant to us – from quarries and recycling specialists to construction companies using our fully hybrid crushing technology on site.' Summing up the successful entry into the UK market Mr Dieplinger said talks with other sales and service partners were nearing completion: 'We are in the process of strengthening key positions and will be able to present an even stronger 'Team UK' in Buxton at the end of June.'

## Exhibitors A-Z

Schäfer-Technic have produced road maintenance and repair machinery for over 40 years

### Schäfer-Technic GmbH H16

As a medium-sized family-run company, Schäfer-Technic can look back on a long business tradition. Founded as a forge in 1898, the company's focus has shifted over time and for more than 40 years it has been producing road maintenance and road repair machinery, as well as automotive manufacturing machinery in Fellbach. At the same time, Schäfer-Technic have developed their own control engineering and offer services covering all aspects in this product segment. The company's core focus is on bitumen processing machinery and units that offer high performance and exceptional processing quality. A professional team of more than 80 employees ensures a smooth process in project planning, design and production, continuing to sales and aftermarket service. The business also offers apprenticeships in commercial and business management fields to ensure it is ideally equipped to face future challenges.

## Shell Lubricants

### PA32

Visitors to Hillhead 2024 will be able to explore lubricant solutions for quarrying, construction, and recycling with Shell Lubricants and Shell PANOLIN biodegradable lubricants. With businesses under pressure to deliver more, while also contributing to a more sustainable future, they must adapt to rapidly changing standards and regulations – and use fewer resources, without compromising performance. All of this requires the proper maintenance and protection of equipment – an area in which lubricants can help. As the world's need for mobility, construction, and industrial production increases, so does the demand for lubricants. However, there is a need to balance the increasing demand of lubricants with the environmental impact to accelerate positive change. Shell help customers to meet these needs. Shell Lubricants and Shell PANOLIN Lubricants bring together decades of experience and experts in research and development. The wide range of industrial lubricants and now biodegradable lubricants offered under the new Shell PANOLIN brand are helping customers to safeguard sensitive ecosystems without compromising equipment performance. Shell Centre, London SE1 7NA

## Sigma Asphalt Technology

### RA5

SIGMA is an Italian-Turkish partnership for the manufacture of top-quality stationary and mobile asphalt plants with capacities between 80 and 340 tonnes/h. SIGMA asphalt plants reflect the most advanced technology applied in Europe, developed by the company's multinational engineering

team, which has more than 30 years' experience in the field. The first principle of SIGMA is to supply reliable asphalt plants that produce perfect hot-mix at desired capacities while consuming minimum energy and complying with the European environmental standards. Reasons for choosing SIGMA include: top-quality components, perfect mixture at desired capacity, low energy consumption, low maintenance requirements, container-sized modules, economic transport, simple installation, eco-friendly operation, and fast and economic after-sales service.

## Sitech UK & Ireland A25

SITECH are exclusive dealers for Trimble's machine control systems and experts in deploying site positioning systems, construction site software, and delivering first-class training and professional services. The company uses its expertise and industry experience to deliver tailored solutions that transform the productivity of civil engineering and construction projects of any size, allowing companies to get jobs done easier, safer, more accurately and save money through efficiency. Morgans Business Park, Unit 17, Bettys Lane, Norton Canes WS11 9UU 0808 1969 139 [www.sitechukandireland.com](http://www.sitechukandireland.com)

## Skako Vibration Ltd N25

Skako Vibration specialize in the design, development, and supply of vibratory equipment such as feeders, conveyors, grizzlies, and screens, as well as densimetric tables, lift-tippers, and washing drums to move, separate, and wash bulk materials. The company's equipment is used in the recycling, minerals and fastener industries with an emphasis on delivering improved sustainable performance for its customers. Some of Skako Vibration's machines separate used broken glass by size which is then fed to optical sorters for recycling. Some systems segregate metals from plastics, or compost from sand, whilst other units wash demolition waste, sieve old cardboard, or recycle used tyres, cables, batteries, and electronic components. The company's machinery can sort limestone, basalt, or raw phosphate to optimize the processing and it also screens red hot iron ore at a high flow rate to recover heat and make steel production less energy intensive. Elsewhere, Skako Vibration's equipment moves bulk metal parts, ensuring manufacturing processes are more efficient whilst safety and good working conditions are met. Station Road Ind Est, Tadcaster, North Yorkshire LS24 9SG 01937 838010 [skako.dk@skako.com](mailto:skako.dk@skako.com) [www.skako.com](http://www.skako.com)

## SKF F2

SKF are one of the world's largest bearing manufacturers, providing and supplying bearings, seals, lubrication

systems, maintenance products, mechatronics products, power transmission products, condition monitoring systems and related services. The company has the largest industrial distributor network in the industry, with 17,000 distributor locations encompassing 130 countries. Sundon Park Road, Luton, Bedfordshire LU3 3BL 01582 490049 [www.skf.co.uk](http://www.skf.co.uk)

## Sleeve It Ltd RA8

Established in 2003, Sleeve It manufacture and supply a diverse range of insulation materials, protective sleeving, 'E' glass sleeving, and identification products. The company provides innovative solutions tailored to enhance the performance and lifespan of hydraulic hoses and cables across a variety of extreme environments. Unit 36, Dollywaggon Way, South Rings, Bamber Bridge, Preston, Lancashire PR5 6EW 01254 694733 [sales@sleeveit.co.uk](mailto:sales@sleeveit.co.uk) [www.sleeveit.co.uk](http://www.sleeveit.co.uk)

## SLR Consulting PD18

SLR have been advising clients for over 25 years at every point of their project life cycle. What began as a UK-based venture has now evolved into a global company with more than 3,000 people delivering client solutions across six regions. SLR is a business that helps solve sustainability issues – be they strategic, engineering, or technical. Everything SLR does impacts people, communities, and the environment – whether helping a facility comply with environmental regulations, land and mineral exploration, designing a new development, or advising leadership. 35 Dale Street, Manchester M1 2HF 03300 886631 [www.slrconsulting.com](http://www.slrconsulting.com)

## Smiley Monroe E5

Founded in 1979 and headquartered in Northern Ireland, 'The Giants of Belting' serve 10 key industries including quarrying and recycling. The company says its belts do not just carry rocks, the names of the most prestigious manufacturers of mobile equipment are on there too. ZIP CLIP, the world's fastest replacement conveyor belt is revolutionizing the aftermarket. Supplied ready to fit, this mechanically fastened belt will have a machine back up and running in just one hour, maximizing uptime. 23 Ferguson Drive, Knockmore Hill Industrial Park, Lisburn BT28 2EX 028 9267 3777 [hello@smileymonroe.com](mailto:hello@smileymonroe.com) [www.smileymonroe.com](http://www.smileymonroe.com)

## SMT GB Y5

Established in Great Britain in 1967, the SMT GB dealership has an established reputation for market-leading quality equipment and unrivalled customer support. Operating from eight Customer Support Centres throughout Great Britain, supplemented by strategically located home-based engineers, the company able to offer the level of support expected from a global construction equipment distributor. Services Machinery & Trucks Ltd, Moorefield Road, Duxford, Cambridgeshire CB22 4QX 01223 836636 marketing.gb@smt.network www.smt.network

## Spartan Solutions RB36

Spartan Solutions enhance rental operations with PHALANX 6, making processes paper-free and more efficient. The software platform simplifies tasks, enabling teams to focus on what matters most. PHALANX 6 transforms rental workflows by replacing traditional paperwork with user-friendly apps. Its new Rental AI Copilot automatically rejects non-compliant photos and suggests text from minimal input, improving compliance and quality.

SRL will show their award-winning Haul Route PLUS, which improves safety at plant crossings while promoting the efficient flow of traffic

Spartan have also recently released TouchPoint, an app designed in collaboration with rental drivers. TouchPoint combines vehicle checks, work execution, and truck navigation into one simple mobile app for efficient, paperless equipment transport. These solutions are about moving rental businesses forward with technology that is not only advanced, but also intuitive. PHALANX 6 and TouchPoint optimize rental operations and boost customer satisfaction by offering smart, simple, and effective digital tools. Inovo Building, 1st Floor, 121 George Street, Glasgow G1 1RD 0141 559 7100 info@spartansolutions.com www.spartansolutions.com/

## Spectrum Industrial RC11

With over 30 years' experience, Spectrum Industrial specialize in providing comprehensive solutions covering including health and safety signs, lockout tagout, construction safety, tagging inspection, and bespoke design and manufacturing services. The ISO-accredited company has a strong sustainability ethos using recyclable materials wherever possible. Centurion Europe House, Hunt Lane, Doncaster DN5 9SH 01302 800273 sales@spectrum-industrial.co.uk www.spectrum-industrial.co.uk

## Spillard Safety Systems B20

In their 32nd year of championing site safety and safe behaviours around mobile plant, Spillard will be introducing their latest innovation: the next-generation Human Form Recognition System and their complementary video telematics platform, Spillard Live. Powered by cutting-edge deep-learning technology, AI cameras proficiently identify human shapes and characteristics within predetermined detection zones. Upon detecting an incursion, the AI human detection system generates bespoke

internal visual and audible alerts for the operator, based on the specific quadrant around the machine, and delivers external spoken alerts to on-site personnel. Simultaneously, it establishes a connection to detection data for remote video verification via the Spillard Live platform. The portal offers comprehensive data, including company name, incident ID, machine ID, outer/inner zone classification, geographic co-ordinates, incident date/time, and asset supplier information.

Solutions House, Deepmore Close, Station Road, Four Ashes, Wolverhampton WV10 7DB 01902 797930 sales@spillard.com www.spillard.com

## SpreadPoint Ltd E18

Based in Co. Down, Northern Ireland, SpreadPoint produce specialized machines for professional users. Winner of 'Machine of the Year' in 2023 and multi-award winner at Lamma 2024', at Hillhead 2024 SpreadPoint will be showcasing the 'Gritty' – their unique salt and grit spreader for highway winter maintenance. The TF-20 gravel cart will also be on show. This 20-tonne cart is the one of three in the model range, the other two being 7-tonne and 8-tonne versions. 12 Cottage Road, Downpatrick, Co. Down BT30 8PQ 028 4433 0447 www.spreadpoint.co.uk

## SRL Traffic Systems D12

SRL are making its Hillhead debut with the presentation of a portfolio of mobile intelligent transport system (ITS) solutions to improve quarry safety. The patented, award-winning Haul Route PLUS improves safety at plant crossings while promoting the efficient flow of traffic. The only crossing solution integrating adaptive detection technology, it incorporates traffic signals that respond to the actual flow of quarry vehicles rather than operating to timings set to accommodate the slowest plant. Durable RiseMaster HE fully autonomous solar-powered automatic boom barriers (patent pending) have recently been incorporated into the solution, featuring dual-aspect panels designed to maximize solar performance while minimizing maintenance requirements. Within quarry perimeters, barriers can be used in conjunction with full-colour, high-resolution VMS, signals, CCTV and ANPR to promote on-site safety. All products feature a robust design to guard against accidental damage and have been created to perform reliably in harsh weather conditions. ## Sunward Europe Heavy Industry NV

Y2

Sunward Europe's success since their establishment in 2015 is attributed to the quality of their machines, which are specifically designed for the European market and meet the latest standards and offer a comprehensive set of standard equipment. Another crucial factor is Sunward's network of over 150 dealers covering all of Europe. In support of their growth, Sunward Europe have invested in new facilities in Tessenderlo, Belgium. Spanning 25,000 square metres, the site includes a large stock of machines and spare parts, a demo area, a technical training centre, and a large workshop. From Tessenderlo, Sunward provide extensive technical and logistical support to their dealer network, ensuring over 95% availability of spare parts. Sunward's strategic direction in Europe includes the introduction of new products to strengthen their existing Construction Equipment business unit. Two new business units have been established at the Tessenderlo site, focusing on Lifting Equipment, with a new range of scissor lifts and compact telescopic cranes, and Foundation Equipment, featuring a range of drill rigs. ## Tarmac H1

Tarmac, the UK's leading sustainable building materials and construction solutions business, have over 150 years' experience and offer a diverse range of products and services to the construction sector; solutions that span aggregates and asphalt, cement, lime and powders, recycling services, building products, and concrete. Tarmac also operate UK's largest contracting and highways services company. Contributing to many of the UK's major infrastructure developments, Tarmac are part of CRH plc, an international leader in building materials. Portland House, Bickenhill Lane, Solihull, Birmingham B37 7BQ enquiries@tarmac.com tarmac.com/

## Tascol Shore Engineering PB42

Tascol Shore Engineering design and manufacture weighing, feeding, and control equipment for a variety of industries. The company's products – which have been supplied to many blue-chip organizations – include bagging machines, belt weighers, continuous and loss-in-weight

weighers, throughput systems, and control equipment. Unit 14 Coach Gap Lane, Langar, Nottingham NG13 9HP 01949 860780 www.tascol.co.uk

## TCET/Insytly PC1

TCE work across many industries including construction materials (cement, sand and gravel, brick, block, tile, asphalt, concrete), mining, recycling, automotive, and many others. There are three parts to the business: TCE Monitor, TCE Transmission, and TCE Lubrication. TCE Monitor is a fully remote monitoring and reporting service utilizing cutting-edge cellular technology to provide reliability information (electric motors, gearboxes, pumps, bearings etc) to clients 24/7. TCE Transmission provide technical customer service for transmission chains, attachment chains, conveyor chains, bulk handling chains (bucket elevator, scraper, apron conveyor), special application chains etc. TCE Lubrication offer technical service with a broad range of automatic lubricators – single and multi-point systems, from small 15ml stand-alone battery units to fully integrated PLC-driven systems with multiple points up to 16 litres capacity, right up to bulk delivery lubricators with 41 litres capacity. The company also offers a full range of greases and oils for most industrial applications. For all of the above TCE offer a full installation service and annual on-site service engineering plans. Vicarage Corner House, 219 Burton Road, Derby DE23 6AE 0121 369 3659 www.tcet.co.uk

## Technidrive PB10

Founded in 1998, Technidrive create industrial drive solutions for the quarrying, recycling, and other industries. The company specializes in electric motors, industrial gear units, and electrical automation. Technidrive is a WEG Premier Partner and Bonfiglioli BEST Partner; these accolades enable the company to house a state-of-the-art assembly centre and hold the most extensive stock in Ireland. The team's combined experience has allowed Technidrive to become a leader in industrial drive solutions. Technidrive will be exhibiting alongside longstanding partner, electric motor manufacturers WEG. Attendees will get an exclusive look at their newly developed high-speed drum drive solution and can learn more about the benefits of their jaw crusher automation system. 21 Charlestown Drive, Portadown, Co. Armagh BT63 5GA 028 37 518111 sales@technidrive.co.uk www.technidrive.co.uk

## Technowell Europe Ltd PC52

Working within the construction, agricultural, industrial fork-lift truck and electric vehicle sectors, Technowell manufacture custom electro-hydraulic steering assembly solutions for the heavy-duty off-highway vehicles market. The design and manufacture of customized electrical forward-reverse shifters and electrical multifunction turn signal indicators to suit customers' specific requirements is the company's strength. With more than 20 years' experience in the design and installation of electrical shifters, hydraulic steering units, steering wheels, and steering columns, Technowell specialize in component parts as well as complete integrated steering solutions. 18 Bryggen Road, North Lynn Industrial Estate, Kings Lynn PE30 2HZ 01553 765927 www.technowell-europe.com

## Tele Radio UK Ltd PD15

Tele Radio are delighted to be exhibiting at Hillhead 2024. The quarrying, construction and recycling industry is one of Tele Radio's most popular markets and Hillhead allows them to interact with manufacturers, system integrators, owners, and operators from across the UK. One of the market leaders in the design and manufacture of industrial radio remote control solutions, Tele Radio will be showing products from simple push-button controls to complex, customizable, proportional hydraulics and camera feedback systems, all designed for efficient, safe, precise, easy-to-use control of machinery and equipment. 1 Seymour Court, Manor Park, Runcorn, Cheshire WA7 1SY 0844 776 6687 sales.uk@tele-radio.com www.tele-radio.com

## Telemecanique Sensors PB19

Founded 100 years ago, Telemecanique Sensors specialize in sensors and sensor-related technology. Telemecanique Sensors are a global player, present in more than 20 countries, with products distributed worldwide through a broad network of partners. Each sensor type is engineered to address specific requirements across varied industrial applications, providing reliable and precise detection capabilities to ensure operational efficiency and safety. From ultrasonic sensors for collision avoidance and material-detection on conveyors, through limit switches to detect conveyor belt slippage, to safety rope pulls and machine guard switches for operator protection, Telemecanique Sensors provide the complete sensor range for all quarrying, construction, and recycling applications.

### C15

TEMA Process BV are specialists in the design and manufacturing of thermal processing equipment for the drying of minerals (sand, gravel, limestone, clay, salt etc.) The TEMA fluid-bed system can be applied not

only for drying, but also for cooling. Shaking fluid beds are frequently used for the drying of raw natural minerals or pre-processed minerals. The shaking drive mechanism allows for uniform drying of a large spread in particle size distribution (110 microns to 10mm), without disruptions of the fluid bed, suitable for capacities up to 100 tonnes/h. TEMA fluid-bed dryers are specially preferred in mineral drying in combination with after-cooling and heat recovery, resulting in better product quality and very low energy consumption. Heat recovered from the cooling zone is re-introduced in the drying zone to save energy. Ir. R.R. van der Zeelaan 5, JH Wapenveld, 8191, The Netherlands

## Tennant UK

### C2

Tennant are a global leader in the design, manufacture, and supply of industrial cleaning machines for the aggregates and manufacturing industries. Controlling dust and debris, and protecting workers and the work site, are major challenges within the aggregates sector and Tennant understand the pressure to maximize uptime, reduce costs, and conform to regulations to reduce the possibility of fines. The company has heavy-duty sweepers and cleaning systems designed to meet all of these challenges. Its machines are designed to maintain air quality by reducing airborne (silica) dust and debris with innovative filtration. Features such as large hoppers and automated dumping, plus easy-to-use controls, improve productivity by allowing operators to clean efficiently and safely. ## Total Batching Solutions Ltd

N5

Total Batching Solutions are one of the leading UK manufacturers of highly mobile and quality bespoke modular and static concrete batching plants. At this year's Hillhead they will be launching their brand-new MB130E Ultra Mobile concrete batching plant – the most mobile, fastest set-up, high-production batching plant in the global market. Available to hire for specific construction, infrastructure, or civil engineering projects, or to purchase outright, the TBS Ultra Mobile is the ideal plant for producing high-volume, premium-quality mixes on site – from remote windfarms, port developments, and logistics parks to nuclear facilities, roads, rail, and airports. TBS modular plants are ideal for fast set-up, low civils, high end

production for longer-term projects or ready-mixed concrete sites. TBS bespoke static solutions offer totally customizable batching plants to meet customers' exact specifications and site requirements. TBS also manufacture and offer industry-leading powder silos, aggregate storage bins, concrete recycling, fibre dosing, and heating systems.

## Translas UK

RA9

Translas, an innovative Dutch manufacturer, offer extremely user-friendly welding fume extraction systems, with the highest capture rate and duty cycle in the industry. Welding fumes have been increasingly under the spotlight in recent years, following a change in enforcement expectations by the HSE. It has been proven that general ventilation alone does not provide sufficient protection from welding fumes and scientific evidence provides a direct link to cases of lung cancer and neurological disorders, in addition to other more common health issues such as asthma. As a result, all businesses performing welding activities have a responsibility to provide effective engineering control measures to minimize this risk. The Translas system is the safest, most effective method of controlling this, with up to 98% of welding fumes being captured directly at source, along with a high level of operator satisfaction.

## Triangle

V10

Triangle are the fourth-largest OTR tyre manufacturer in the world and have been distributing earthmover tyres throughout Europe and UK for more than 15 years. Recent years have seen the Triangle brand getting stronger in the Europe with the introduction of new sizes to further expand the already wide range. OEMs such as Caterpillar, Volvo, Komatsu, Liebherr, Hyundai, Doosan, Terex and many other earthmoving equipment manufacturers are choosing Triangle tyres, demonstrating full confidence in their reliability, technical pattern designs, rigorous testing, and quality control. The low cost per hour of a Triangle OTR tyre is another important factor, with the tyres designed to deliver higher efficiency and lower running cost working in complex and harsh road conditions 24h a day, seven days a week. The company manufactures a complete product range from 24in radial and bias OTR tyres to the biggest 'jumbo' OTR sizes, up to 63in, designed to carry more than 400 tonnes of payload. ### Vibroack Ltd

PB16

Vibroack, one of the UK's leading environmental consultancies, offer specialist environmental advice

and monitoring ranging from air quality to the measurement and assessment of vibration and noise. The consultancy provides expert services within the UK and abroad to businesses, local authorities, and individuals. As an independent consultancy, Vibrock provide their clients with environmental services of the highest quality, based upon the strength of their experience, technical knowledge, and project management. Vibrock's own instrumentation team provide sales and hire for their range of V9000 seismographs, as well as providing a comprehensive repair and calibration facility which includes on-site service to maintain the continuity of their clients' monitoring operations. Options for the V9000 seismographs include: two-stage audible/visual alarm, air over-pressure microphone (100–152dB range), 2G modem for multiple text alerts and remote capabilities, and twin-channel monitoring capability. Shanakiel, Ilkeston Road, Heanor, Derbyshire DE75 7DR 01773 711211 vibrock@vibroack.com www.vibroack.com

### Volumech

CE1

Volumech, a subsidiary of Cemen Tech, stand at the forefront of the volumetric concrete mixing industry in the UK. With a history dating back over 25 years, Volumech have been instrumental in pioneering and advancing the use of volumetric mixers, with a dedication to delivering innovative solutions, exceptional customer service, and reliable products that meet the evolving needs of the construction industry. Unit 1 Atlantic Way, Wednesbury, West Midlands WS10 7WW 0333 360 2990 enquiries@volumech.co.uk www.volumech.co.uk

### Volvo Financial Services

Y5

Volvo Financial Services UK were established in 1985 as the captive financial services provider for Volvo Group. With more than 1,500 employees in 50-plus markets, Volvo Financial Services UK offer complete solutions for financing and service. Co-exhibiting with SMT and also supporting Volvo Trucks, Volvo Financial Services staff will be on hand to listen and learn about your business successes, challenges and needs, and help visitors explore the company's adaptable solutions and range of flexible finance product offerings. Wedgnoek Lane, Warwick CV34 5YA 01926 414352 vfs.marketing.uk@volvo.com www.vfsc.com/gb

### **Volvo Penta** Y5

Volvo Penta will, once again, have a strong presence at Hillhead with examples of their latest industrial engines on show. The company's powerful high-performance engines have been optimized to meet today's challenges and tomorrow's needs, with a continued focus on maximizing uptime and fuel efficiency, along with ease of installation, operation, and maintenance. Visit the Volvo Penta stand to see how the company's innovations are shaping the future of industrial solutions.

### Wirtgen Ltd

#### Q1

Wirtgen Ltd are a wholly owned subsidiary of the Wirtgen Group, a John Deere company, and are responsible for the selling and aftercare of all Group products in the UK. As a technological leader, they can offer their customers mobile machine solutions for road construction and road rehabilitation, as well as for the mining and processing of minerals. Wirtgen Ltd will be exhibiting several new products for the first time in the UK from across their Wirtgen, Vögele,

The Vögele Super 1900-5i asphalt paver from Wirtgen

Hamm, Kleemann, Benninghoven, and John Deere product brands. These will include the world's first hydrogen burner from Benninghoven, and two new Vögele Pavers – the Super 1900-5i Highway Class and Mini 500 Compact. In addition, the new double-deck post-screening unit on the Kleemann Mobirex MR110Zi EVO2 crusher demonstrates that it is now possible to produce two classified final grain sizes with a single machine, without having to set up an additional screening plant. Wirtgen Ltd will also be demonstrating their latest digital assistance systems, telematic solutions, and automation of processes, evidencing their commitment to safety and sustainability.

# Directory of **Quarries & Quarry Equipment**

**39th edition**

**New  
edition**

## **Guide to the UK Quarrying & Recycling Industries**

The 2024/25 edition of the Directory of Quarries and Quarry Equipment is now available.

Each section is colour coded for easy reference and each listing includes contact details.

### **The 39th edition of the Directory includes:**

- Operational aggregate quarries in England, Scotland, Wales & Northern Ireland
- Quarry operating companies
- Aggregate recycling contractors, companies and depots
- Suppliers of plant, equipment, materials and services:  
From Abrasion-resistant materials to Wheel Washing
- Industry-related organisations:  
From Conservation & Environment to Trade Associations

**£57.50 UK**

**£67.50 Overseas**

### **Choose from 2 easy ways to order:**

1. Order online at  
**[www.qmj.co.uk/shop](http://www.qmj.co.uk/shop)**
2. Email [sue.chambers@qmj.co.uk](mailto:sue.chambers@qmj.co.uk)

## MATTHEWS & SON LLP

*Chartered Surveyors*

### Senior Surveyor/Associate – Minerals & Waste NATIONWIDE

Matthews & Son LLP is looking for an enthusiastic senior professional to work in one of the leading minerals and waste property practices in the UK to enhance and strengthen the team. The post would ideally be based at our offices in either London or Nantwich, but we can offer flexibility on remote working depending on the candidate.

The firm has a wide geographical client base and requires a commitment to providing best possible service to our clients, an astute commercial approach and good communication skills.

Qualified candidates should be highly motivated individuals with an existing business stream and require experience in at least two of the following areas: minerals and waste surveying, rural surveying, planning, valuation, compensation, rating and estates management. The role may also suit a candidate looking to work with Matthews & Son LLP on a consultancy basis.

Salary / terms would be based on experience and qualification.

**Please respond by email only to Paul Malam**  
(pjm@matthewsandson.co.uk)

### Quarry Managers and Assistant Quarry Managers – Midlands

NRS is a leading family owned quarrying company and a major supplier of aggregates, transport, recycling and waste management services.

To support the expansion of our growing business, we have new opportunities for both Quarry and Assistant Quarry Managers who will be based in the Midlands.

The successful candidates should have demonstrable previous practical experience in all aspects of quarrying operations from extraction to restoration.

The roles will suit self-motivated individuals with the ability to manage and develop staff while demonstrating an understanding of appropriate legislation.

You will be customer focused, ensuring service and quality standards are achieved and maintained.

The ideal candidates will have:

- Excellent awareness of current Health, Safety and Environmental Legislation.
- Completed or working towards a SHE NVQ Level 4 or equivalent.
- At least 3 years relevant experience.
- A good understanding of plant and machinery, including maintenance planning.
- Comprehensive understanding of Quarries Regulations.

These are excellent opportunities to fulfil important roles within a growing and successful business.

Closing date: Friday 19<sup>th</sup> July

To apply please send a covering letter and CV to [ian.p@nrswastecare.com](mailto:ian.p@nrswastecare.com)

For an informal confidential discussion about these positions, please call Ian Pearson on 07769 628923.

**Need to recruit  
skilled and  
experienced  
people from  
the quarrying  
industry?**
