

High Pressure Laminate - Cleaning Method

WORRY FREE! There's nothing easier than cleaning and caring for ADMIRA Laminate surfaces.

A major advantage of ADMIRA's laminate surfaces is that our quality HPL surface makes cleaning so simple and easy. Usually, moist cloths are sufficient, but for grease and oil, use a mild cleaning solution. The more stubborn dirt can be removed with an organic solvent such as methylated spirits or alcohol. Avoid using brushes with hard bristles or wire brushes on a HPL surface.

***A properly careful HPL surface will easily look brand new and lasting for years in an indoor environment.**

▪ Light/Normal Stains & Dirt

(E.g. Oil and dirt particles, finger-marks, lime deposits, rust, juice, coffee, tea, wax, blood, universal marker, etc.)

Use a dry or damp paper towels, cloth or sponge.

▪ Heavy Stains & Dirt

(E.g. Discoloration through long exposure to tea, coffee, fruit juice and etc.)

Use washing powder / dishwashing solution or a mild glass cleaning fluid (but do not repeat too often)

(E.g. Paint (water or solvent based paints, two-component paints, spray paints), varnish stains, printing ink)

Use water or an organic solvent. Remove two-component paints immediately before it sets in.

(E.g. Lead pencil, felt-tip pen, marker and ball-point pens, lipstick, crayons, wax, shoe polish, nicotine, nail varnish)

Use an organic solvent such as acetone (nail varnish remover), methylated spirits, petroleum spirit, and perchloroethylene. Read the solvent instructions carefully before use!

(E.g. Two-component adhesives, urea resin, melamine, phenolic resin)

Remove immediately as soon as possible! Do not allow the stains to harden on the HPL surface!

E.g. Adhesives (water-based, dispersion)

Use water or organic solvent.
