Did you know...

Natural light isn't always enough for healthy plant growth – especially during colder months, when the days are shorter, and sunlight is scarce. That's when our specialized lighting can help your plants thrive!

What is PPF?

The performance of plant lights is not measured in lumens but in PPF (Photosynthetic Photon Flux), which indicates how much plant-usable light the lamp emits.

The more $\mu\text{mol/s}$, the better for your plants!

LED VITARO 4 CLIP 10W

size: max 66 cm
INDEX: KDSN00000083
EAN: 5902201383188

10 WATT

special light spectrum

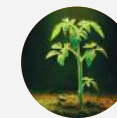

Not all light affects plants in the same way. Our lamps offer a specialized spectrum that **supports every stage of growth!**

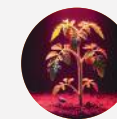

BLUE LIGHT
strengthens leaves and promotes compact seedlings

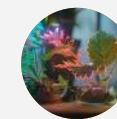

RED LIGHT
encourages flowering and fruiting

GREEN LIGHT
mimics natural sunlight

FAR RED LIGHT
supports roots and blooming (combined with blue light)

UV AND INFRARED LIGHT
boosts overall plant health and metabolism
